Introduction

etween 1975 and 1982, the average size of all new houses and apartment units built in the United States dropped from 1,526 to 1,449 square feet—a loss of over five percent of critical living space. During roughly the same period (1976 to 1984), the average cost of a new home more than doubled, from \$43,340 to \$89,400. And because of that increase, homeowners and tenants now devote more than thirty percent of their incomes to paying for the roofs over their heads, as opposed to roughly one quarter just ten years ago. As Joan Kron so aptly puts it in *Home-Psych*, her fascinating treatment of the psychology of home decoration, "The right to a place of your own is a luxury this country can no longer include in the gross national promise."

Because of the growing costs of shrinking space, more and more people are being forced to share living quarters not large enough for the purpose. Graduates who once would have moved away from home the minute the ink was dry on the parchment must now remain with their parents or squeeze into tiny apartments with too many roommates. Young married couples are finding it prohibitively expensive to add on or move to larger quarters as their children grow. Retirees trying to juggle fixed pensions against an ever-rising cost of

living find that their only option is to move in with their adult children, who then must tackle the thorny problem of making adequate room for them. Even those fortunate enough to have suitable housing usually find that their possessions increase with the same tenacity as outdated newspapers while their available space remains stubbornly the same.

Short of enlarging your present home, ruthlessly discarding treasured acquisitions, or finding a larger place, there is still much you can do to allieviate your space crunch, no matter what its nature. And you needn't hire a design consultant to help. If you must cope with a sardine-can kitchen, yet like to prepare gourmet meals from time to time, there are appliances and accessories scaled to fit in minimal space whose performance is up to the standards of even a master chef. If your off-season clothes and linens are crammed under the bed, a new closet system or set of modular storage pieces can transform the chaos to order. If you've recently begun to work at home and despair of ever finding a place to put your desk and papers, a folding desk and rolling file cabinet might be the answer. In short, whatever your space problem, you should find one or more potential solutions in the pages of Portable Furniture.

What you won't find in this book are common solutions: dime-a-dozen convertible sofas and flimsy folding chairs and tables. Each of the pieces illustrated here has been selected for inclusion on the basis of several criteria: its space-saving design, its utility, and its quality. Flexibility is paramount, whether in a folding tea cart, a coffee table that hides an extra bed, a weatherproof stacking chair, or a set of canisters that looks equally handsome placed on a counter top or hung from a rack under the kitchen cabinet.

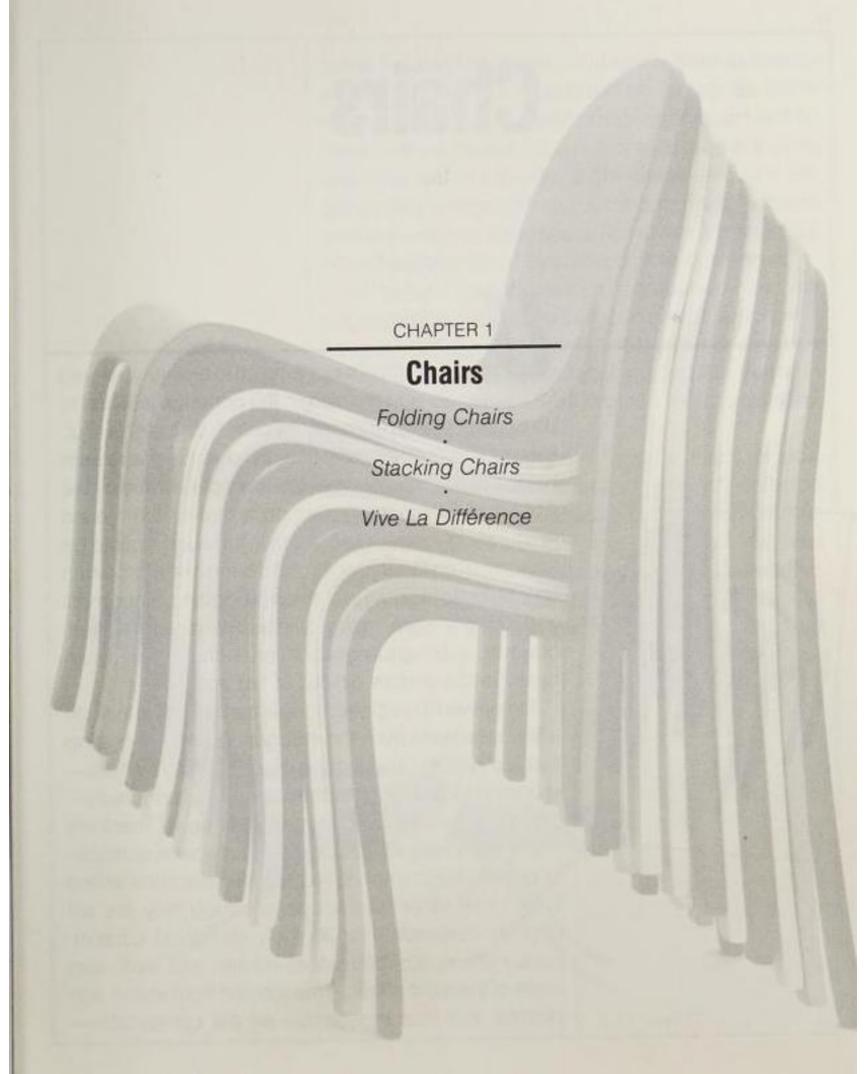

For the sake of convenience, Portable Furniture is ar-

ranged by chapters according to general type of furniture, making it easy to find the subject of greatest interest to you, whether it be children's furnishings, shelving, or a sectional sofa. Yet many of the pieces are so
useful and of such classic design that they could well
be used in several different areas—a sleek outdoor table
in the dining room, for instance, or a child's bed with
trundle in the study that has to double as a guest room.
So browse at your leisure; chances are you'll find a
number of portable furnishings that are exactly right for
your needs.

To facilitate your locating the manufacturer or retailer who carries each piece once you have made your selection, you'll find that all suppliers' names appear in bold type the first time they are mentioned in the description of a particular item. An alphabetical list of those suppliers, with their addresses, telephone numbers, and any charge for literature, begins on page 179. The index which concludes the book will guide you to all the offerings included for each supplier.

A book must be arranged with the same care and attention to space, detail, and quality as any home. To that end, I am indebted to a number of people. First, to Martin Greif, for his ideas, encouragement, and editing. To Frank Mahood, for the spaciousness and clarity of his design for text and illustrations; and to John Fox and Lisa Magaz for bringing that design to fruition. I am grateful to the many companies and entrepreneurs who made photographs and information available so willingly, and finally, to Liz Rolfe, for orchestrating with such great aplomb the reams of material they supplied.

Chairs

ntil the sixteenth century, chairs were reserved for the nobility and the clergy; the common folk had to be content sitting on chests, benches, and stools. But, even as early as the twelfth century, portable chairs were being made. One documented example, owned by the Abbott of Glastonbury, was an armchair that was a precursor of modern knock-down furniture; it could be taken apart so that its owner could bring it with him when he traveled to less civilized areas of England. Since most early chairs were made of massive pieces of oak, however, even the "portable" ones must have been heavy and therefore difficult to lug about.

Today even the tightest budget can stretch to include a few selections from the staggering array of seating that is available. And though many of today's chairs—including recliners and some upholstered armchairs—are too large and heavy to maneuver easily, there are plenty of choices left for those to whom space, or mobility, or both, is paramount. Nor are the selections limited to oak and other hardwoods, although they are still popular materials. Handsomely designed contemporary chairs are made of aluminum and steel, and some of the most portable are molded from space-age plastics that take ingenious—yet still comfortable—

forms. Folding chairs that collapse into mere inches for storage yet have no hinges to rust or disintegrate, stacking models that can be piled to near skyscraper heights, chairs that will move from living room to patio at a whim and wear well in either location—these are just a few of the many designs offered by modern manufacturers who are sensitive to the space limitations and practical considerations faced by many of their customers.

Yet today's home furnishing companies have not neglected the past masters of good design: among the newest offerings presented in this book is a classic Marcel Breuer folding chair that was first introduced in the 1920s but whose form remains fresh and contemporary in the 1980s.

While acknowledging the timeless forms of past decades, designers and suppliers have not neglected society's current preoccupation with fitness and posture. Among the most innovative and portable of their new designs are those which force us to revise the seated position we habitually take, relieving stress on back and neck while providing the ultimate in comfort and relaxation.

Folding Chairs

Unless you are one of the fortunate few blessed with plenty of space for entertaining, regardless of the number of friends and associates you have to accommodate, chances are that your home or apartment has a cache of folding chairs somewhere. And if you're just starting to furnish a nest for the first time, you'll probably have decided that such useful objects have to be part of your plans. But there is no need to settle for haphazardly made, badly designed wood or metal chairs, even if they only come out of the closet once or twice a year. As the examples on these pages make clear, there is a wide range of good modern design available today that will suit just about any taste and fit in almost any space. Some of the models offered are even handsome enough to hang from the wall as a form of modern sculpture when not in use.

LOCUST. It would be difficult to imagine a more useful chair than Westnofa's Locust. Because it adjusts easily to any seat height from 171/2 up to 29 inches (no tools required), it would serve equally well as a high stool at a kitchen counter or as extra seating at the breakfast table. Made of natural or stained beech with black or red metal support, it folds compactly for easy storage. Designer Torstein Nilsen has included an optional bracket so that it can be hung from the wall or in a closet when not needed.

WESTNOFA

Scandinavian designers are responsible for some of the most innovative home furnishings available today, and the artists who contribute their ideas to Norway's Westnota are among the best in the field. Their concepts tend to be surprisingly simple ones, the lines of the pieces, sleek and sweeping. Natural woods are favored over man-made materials such as metal and acrylic. Many of Westnofa's offerings are designed with space limitations in mind: the firm's chairs either fold, or stack, or can be used in several different positions according to individual comfort requirements. The Locust chair shown on this page is just one example of the style and originality inherent in Westnofa furniture

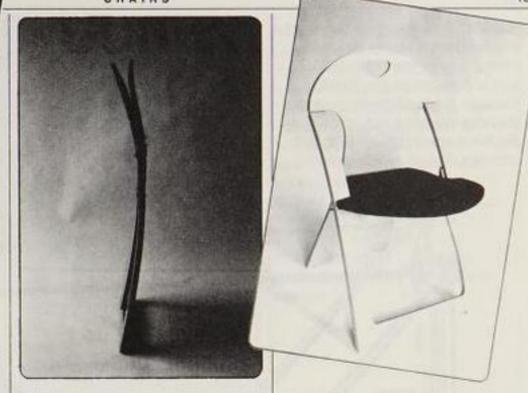

Peter W. Glasser

REGISTA. The ubiquitous director's chair made popular on the Hollywood movie set is certainly useful. But the standard woodframe version with its monotone canvas seat and back has become a cliché. It's also somewhat unwieldy and hard to fold compactly. Why not try this Pottery Barn version instead? It features a light metal frame and two-toned canvas available in a choice of colors, and would look equally well in the living room, at the dining room table, or out in the back yard.

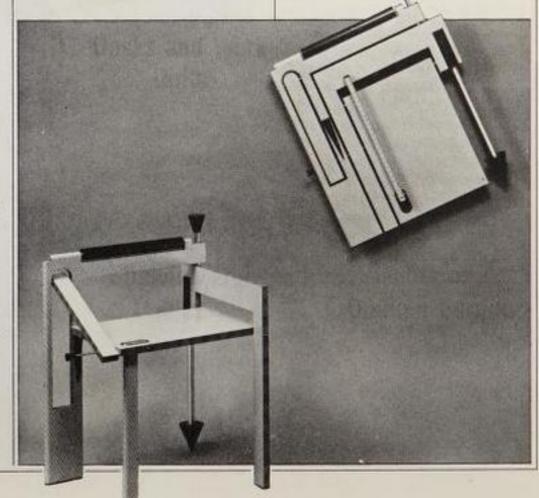

FOLDING CHAIR. Artisan Tom

Loeser has received wide acclaim
for his furniture designs because
of their sculptural qualities. Illustrated here is his folding chair,
an occasional chair which collapses into a puzzle of wooden
panels and stainless-steel hinges.
Multi-colored pastel enamels complement the effect. Even hanging
from its own rack, it is a work of
art, typical of Loeser's one-of-akind furniture available through
galleries or directly by
commission.

THE UNFOLDING CHAIR. Peter Danko conceived the design for this simple, two-piece molded plywood chair. In both concept and execution, it's a far cry from the flimsy wooden chairs so readily available at the local discount

store. An innovative method of molding a pliable material into the chair enables it to fold without hinges. And fold it does, to a mere sliver (two inches). The seat can be padded or not, as you please.

WASSILY. The club chair version of also of tubular steel and fabric. nent collection of The Museum of this handsome Marcel Breuer Modern Art in New York: it can but it was never produced in design was conceived in 1925. quantity, perhaps because the now be a part of yours, as well. and is often called the Wassily manufacturing methods of the because it was allegedly made for time made the cost prohibitive. the artist Wassily Kandinsky's Happily, it is in production now. Bauhaus apartment. In 1926, the and Palazzetti is importing it from architect offered a folding model, Italy for sale in North America. The Wassily is part of the perma-PALAZZETTI Palazzetti specializes in what the company calls "modern furniture classics." But the term "modern" is relative, as many of the company's pieces were designed in the 1920s and '30s. Classics, however, they definitely are. In addition to the Breuer chair shown here. Palazzetti offers furnishings designed by Mies van der Rohe, Alvar Aalto, and Le Corbusier, among other artists whose concepts have proven to be timeless.

MOVIE. Interna Designs of Chicago is the American representative for a number of innovative European furniture manufacturers. Movie, made by Poltrona Frau, is composed of tubular steel finished in black epoxy. The chair seat and back are available in a wide range of leathers. The combination of manmade and natural materials results in a sleek, handsome design that would look well in most contemporary or traditional settings.

BALANS MULTI. Yes, Virginia, this is a folding chair! Peter Opsvik's design for Westnofa was derived from a revolutionary concept by H.C. Mengshoel. The higher upholstered portion is the seat; the lower, a knee rest. Your body assumes a naturally balanced position, with lower legs tucked under you, so that no undue pressure is placed on back, shoulders, and neck. The Multi, one of a number of Balans styles offered, can be adjusted to any one of four positions to provide comfortable seating for low, standard, or high desks and tables. It can be ordered in a choice of fabric colors to harmonize with any decorating scheme and is available with an optional hanger so that it can be displayed (folded flat) when not in use.

FLEX. Westnofa's Flex chair folds for convenient storage when it's not needed, so you could keep it in the closet until the company arrives. But why would you want to? Ingmar Relling's design is such a handsome one that the Flex deserves pride of place opposite the sofa or near the hearth. Should you need to make room, however, Flex is even handsome when folded. A matching ottoman (not shown) is also available, and the chair back adjusts to three positions for the ultimate in comfort.

PRIMA. One of the benefits of acrylic furniture is that it will blend with any color scheme, so those extra seats around the dining table on Thanksgiving Day won't clash with the centerpiece or the tablecloth. Another benefit is its ease of maintenance (just use a damp cloth and a mild detergent when necessary). The craftsmen at Akko make their folding chair entirely of acrylic, so that it will be equally at ease indoors or out and won't be ruined by a sudden thun-

derstorm. The Prima is available in two styles—with a clear frame with matching clear seat and back, as shown, or with the clear frame and a black seat and matching back. Or choose the back in white or red for contrast. Each Akko chair is individually numbered and surprisingly sturdy (tests prove it will support up to 450 pounds of weight).

Stacking Chairs

While there is no doubt that folding chairs are probably the optimum choice for extra seating if you have a minuscule amount of space in which to store them after visitors go home, stacking chairs, by their very nature, will prove a better investment in the long run. Because of their solid construction and lack of hardware (no hinges required), stacking chairs are sturdier. If rambunctious young children or teenagers are a part of your household; you'll find that, on average, this type of chair will last far longer and will take far more abuse than will its folding cousin. (Even the tiniest intant has a habit of becoming a clumsy adolescent almost before you know it.) As your needs change (and your square footage increases), most stacking chairs can make the transition with grace, becoming permanent seating in the new dining room or in the den, but retaining their flexibility when you need to pile them out of the way for the annual open house.

404 STACKING CHAIR. This dramatically styled side chair was designed in 1930 by Robert Mallet-Stevens, who first used it in the kitchen of a French villa. Although the slender minimal

design makes it appear delicate, the Mallet-Stevens chair is, in fact, sturdy enough to be suitable in any area which gets heavy use, since it's composed of steel tubing and sheet steel. Finished in

NORMAN CHERNER. The sinuous lines and sleek finish of Norman Cherner's laminated plywood armchair give it a sybaritic, romantic look. But at the same time, this classic 1954 chair is an eminently practical solution when extra seating is needed. The chair is lightweight, so it can be moved easily to any location desired. (You might even carry a few out to the patio for a fresh-air fete, as long as you remember to bring them in before it rains.) Best of all, it can be stacked when not in use. The Cherner armchair is available from Fifty/50, which specializes in mid-century decorative arts.

any one of a variety of electric epoxy colors, it would add a bright note whenever extra seating is required. It is available from Palazzetti and Furniture of the Twentieth Century.

PETER DANKO & ASSOCIATES

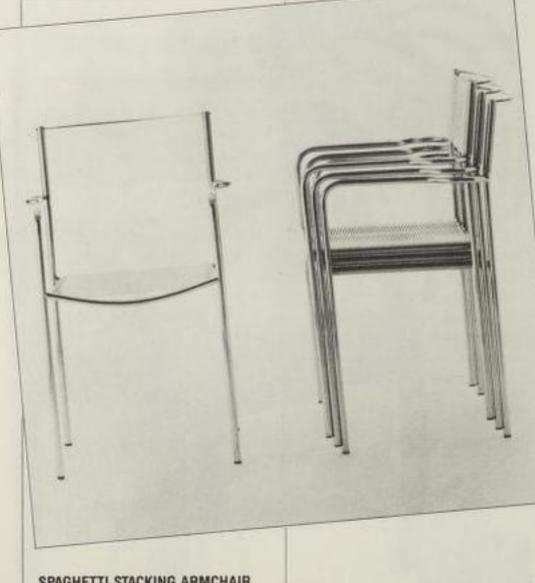

Designer Peter Danko writes: "My years as a craftsman have given me a strong respect for the qualities of wood and other materials. My designs reflect, in their functionalism, the forms and shapes I find beautiful in nature. Moreover, I strive for a visual tension, either static or kinetic, to give each piece life." Danko attains a purity of design in which each element is necessary or complements what is necessary. His resulting pieces are superb examples of what modern decorative arts should and can be.

MARVIN'S CHAIR. Peter Danko's stacking armchair is made of solid beech in a natural finish. (As with all of Danko's designs, you can choose to have the frame stained a mahogany color or painted with black epoxy if you are so inclined.) Seat and back are foamcushioned for comfort, making this a chair equally well suited for living room or dining room, no matter the number of courses or the length of the postprandial conversation.

THE BODYFORM CHAIR. Peter
Danko makes this sleek beauty
from one piece of molded
plywood contoured to fit the
natural lines of the body. Available
with or without a foam seat
cushion, it will stack to an indefinite height, as the photo on
page 11 makes clear. Constructed
of solid beech, the Bodyform
chair is 30 inches high, 22 inches
in depth, and 20½ inches wide,
making it a suitable choice no
matter how limited the space

around your dining table may be.

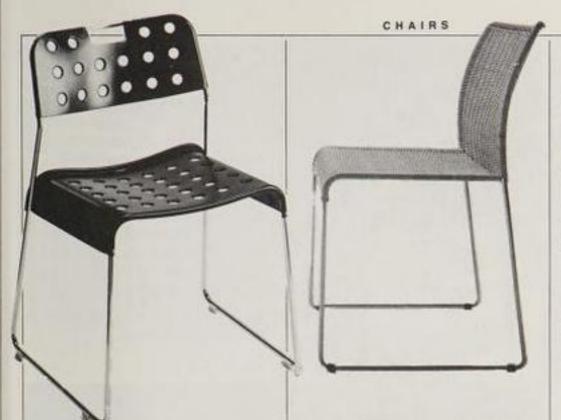

TUX. The Haigh Space design firm won a coveted Progressive Architectural award for Tux recently, and it's not hard to see why. The seat and back are of sheet steel (perforated or not, as you choose). They are attached to a slender tubular metal frame finished in neutral gray; seat and back colors are aqua, white, yellow, red, or black. Tux can be finished to withstand outdoor use and it stacks easily indoors or out. as do the matching armchair and dining table, all available from Bieffe U.S.A.

SPAGHETTI STACKING ARMCHAIR.

Part of the Spaghetti Group designed by Giandomenico Belotti between 1960 and 1982, this ultramodern chair takes its name from the polyvinyl stringing which forms its seat and back. The frame is constructed of steel tubing which can be chromium plated or finished in baked epoxy in a choice of red, white, blue, or black; the polyvinyl stringing is available in the same colors. Matching pieces in the group include stools, dining tables, and occasional tables. If you prefer a different sort of "pasta", International Contract Furnishings offers the same chair frames finished with Lasagna seats and backsthat is, foam sheets held taut with steel springs.

S21 STACK CHAIR. Pierantonio
Bonacina of Italy manufactures
this rattan and metal side chair for
MDI, artfully wedding nature's
materials with man's. The frame is
available in a chrome finish or lacquered in white, black, red,
green, yellow, or gray. The rattancore seat and back are left
natural, of course. MDI will supply
a special trolley that can accommodate a high stack of the chairs,
and offers a matching lounge for
sprawling (it also can be stacked
to save space).

OMKSTACK. Rodney Kinsman conceived his High-Tech design for the Omkstack chair to be manufactured in boldly perforated sheet steel with a chromium finish. Available from Furniture of the Twentieth Century and Bieffe U.S.A., it can be ordered with its own stacking cart (on casters, of course) so that a practically unlimited number can be stored when not in use.

Norman Cherner, the Ion armchair has slim, rectangular wooden legs which curve into rolled edges at the arms. Modern Mode offers the Ion in a choice of cherry, walnut, mahogany, or maple and in a variety of oil and lacquer finishes. Comfortable upholstery pads the seat and low back; yet even so, you can still stack half a dozen in one pile after the company goes home.

LAMINOVA. Designed by Sven Ivar Dysthe for Westnofa, this eye-catching armchair is made using state-of-the-art methods of lamination. The gracefully curved frame is offered in teak, wainut, rose-wood, dark brown, green, red, blue, black, or natural finish. The seat and back cushions are individually molded for comfort and can be ordered in your choice of decorator colors to match or complement the wood finish chosen.

PARCO. Hartmut Elberfeld designed this rounded beech side chair and armchair to be interstacked, an unusually practical feature. Lübke offers Parco in a breathtaking choice of eleven different versions, including chairs with curved back stretchers, partially or fully upholstered backs, and interchangeable upholstered parts in a wide range of colors which can move from one model to another with ease. The choice of finishes for the beech frame is virtually unlimited, from any number of wood stains to a rainbow of matte lacquer colors.

THONET

Founded in 1830. Thonet has been manufacturing fine home furnishings for more than 150 years. From its factories in North Carolina and Pennsylvania, Thonet now supplies a wide range of contemporary furniture for just about every need, whether that need includes a desk for the fledgling company office you are setting up at home, or additional wardrobe space for a burgeoning family. No matter its purpose, you can be assured that each piece will be both well designed and well constructed.

knekt. The clean, spare lines of the solid-beech armchair above insure that it would look well in a wide variety of settings, blending with ultramodern or traditional furnishings with equal ease. Designed by Olav Rolv Tysnes, it is offered by Westnofa in either natural or stained beech and in upholstery colors to suit the most demanding home decorator. Half a dozen Knekts can be stacked in one pile; the resulting area displaced will only be 33 inches wide by 44 inches high.

of oval steel forms the frame of Warren Snodgrass's design for Thonet. Its one-piece upholstered seat and back unit echoes the curves of the frame, which is available chrome-plated, brass-plated, or in beige, white, gray, or red. You can have the arms upholstered or not, as you like, Either way, Interlock stacks five high without support.

SOF-TECH. Designed for Thonet by David Rowland, the Sof-Tech collection includes both a side chair and an armchair, either of which will stack ten high without support. The unusual look of the chair derives from its vinvl-coated springs, which form both back and seat; the springs "give" with body weight and contours and thus provide both support and comfort. The frame is tubular steel, which can be finished in polished chrome plating, brass plating, or painted white, beige, gray, or red. The seat and back are available in a choice of six colors

skandla stacking chairs. Oak veneer molded plywood forms the clean, crisp lines of this Thonet armchair (right), designed for the company by Rud Thygesen and Johnny Sorensen. The foamcushioned seat and back are available in a choice of colors; a side chair provides a second option. You can stack half a dozen of either model without fear that they will collapse.

IBEX. These tough yet comfortable stacking side chairs have backs of injection-molded polypropylene to match their steel frames (available in either brown or white). The upholstered seats are offered in a wide range of fabrics to match or complement the frames. No matter the color

combination you choose, the lbex will provide extra seating without taking up a lot of room; the chair measures only 20 inches in width by 19½ inches in depth and stands a mere 30 inches tall.

Arconas manufactures this steel-framed side chair under license from Hille International.

JOINT. If you're a fan of ultramodern styling, you'll certainly want to consider this sleek stacking chair from Interna Designs. Available with or without minimal arms, it has a nononsense metal frame (available in chrome-plating or blackest black); the seat and back are of black-painted wood. Joint would complement the most avant-garde High-Tech decorating scheme perfectly, either as a permanent addition to a room, or just when needed for extra seating. Both side chair and armchair measure 311/2 inches high, 22 inches wide, and 171/2 inches deep.

CREEK. Sottsass Associates is an Italian firm which specializes in contemporary graphic and industrial design and architecture. Its founder, Ettore Sottsass, has been a prime force in the Memphis Group, a loose affiliation of American and European

designers who are creating some of the most avant-garde home furnishings available today. Creek, one of Sottsass Associates' latest efforts, is a tubular steel and polypropylene stacking side chair available from Furniture of the Twentieth Century and Bieffe

U.S.A. The color combinations available are typical of ultramodern Italian design: the steel frame is painted gray, while the plastic seat and back are offered in matching gray, or in white, black, yellow, or red.

TL20 STACK CHAIR. Thomas Lamb's design for Nienkämper features a steel rod frame, chrome-plated or coated, and an artfully curved laminated plywood seat and back. The one-piece

APTA. The supreme comfort of the Apta stacking chair lies in an ingenious mechanism that adapts it to the physique of the person sitting in it, whether that person weighs 90 pounds or several hundred more. The mechanism adjusts both seats and back automatically as you sit down, and sets the most comfortable position. When you shift, it shifts. Castelli Furniture deals primarily with large institutional clients who need seating for many hundreds of people, but its Apta would adapt well to home use, either for seating guests in comfort during a multi-course dinner, or cradling an avid sports fan during all four quarters of the Superbowl.

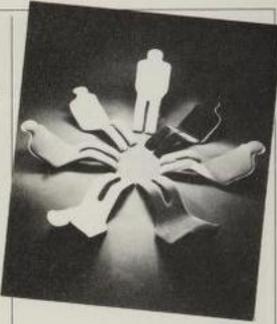

plywood unit can be stained or coated with a clear finish; or you might elect to have it upholstered for added comfort.

Vive La Différence

If circumstances dictate that you must live in a claustrophobic studio apartment or a finy row house with doll-sized rooms, you might think it impractical to include a comfortable lounge chair in your furnishing plans. (The ubiquitous padded recliner, which conjures up images of good book, slippers, and faithful dog, tends to be a heavy piece of furniture, not easily moved when it's time to make up the sofa bed at the end of the day.) But your choice of seating need not be limited to standard folding or stacking chairs, no matter how handsome and utilitarian they may be. Contemporary designers are full of revolutionary new ideas for seating, ideas which may make you change your thinking about what comfort really is. Two of the more unusual are shown on this page.

BOULOUM. Designed by Olivier Mourgue in 1969, the playful yet practical Bouloum richly deserves its place in the permanent collection of the Museum of Modern Art. The stacking lounge chair is shaped in the form of a human figure; its frame is composed of steel tubing comfortably upholstered in a choice of 29 colors which range from conservative gray to eye-popping purple. For outdoor use, Arconas will finish the Bouloum in a gel coat that is impervious to the weather.

FRONTAL 1. Most chairs are not really designed with health and comfort in mind. On the contrary, the seated position we generally assume puts extra stress on back and neck and does nothing for the circulation. Westnofa's Frontal, designed by Tone Grimsrud, is guaranteed to be comfortable either for sprawling or for sitting. With the neck rest removed, its quilted base can be used alone as a stool or footstool, or can be inverted for use as a low rocking chair.

CHAPTER 2

Tables

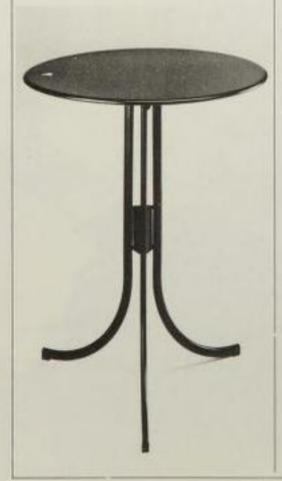

Folding and Knockdown Tables

Stacking and Nesting Tables

Extensions/Expansion Tables

Tea Carts and Trolleys

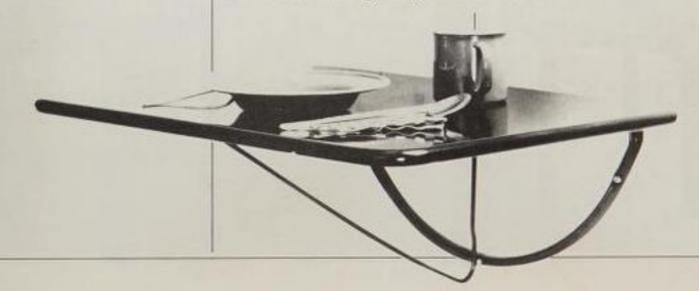

Tables

educed to its lowest common denominator, the basic requirement for a table is a flat, horizontal surface, raised some distance off the floor, on which to put things. The "things", ranging from place settings for twelve to frozen dinners for two and from treasured antique collectibles to a microwave oven, dictate the minimum size and height that a particular table should be to accommodate them. Whether you are just beginning to furnish your first home, or have decided to completely redecorate your present one, you'll need different tables to serve different functions. Yet selecting one table for each of its potential uses, no matter how infrequent, can severely cramp your style—and your living space. For example, it's all very well to have a massive oak refectory table in a formal, capacious dining room, but it would look odd, and be highly impractical, on permanent display in a one-room apartment (unless you plan to sleep on it as well as eat off it). By the same token, you may want to prove your hospitality by offering each of your guests a small cocktail table to rest drinks and hors d'oeuvres upon, yet on the more frequent occasions when you're not entertaining, such a thoughtful accoutrement can really limit your maneuvering room.

Fortunately, contemporary furniture designers have taken such problems into account and have solved them in interesting and innovative ways. Many of their creations, whether made of wood, metal, the newest polymers, or a combination of several materials, are inordinately practical and space-saving pieces of furniture. Some fold compactly for storage until you need them (one particularly ingenious gate-leg table even hides four folding chairs when closed). Others can be expanded at will simply by inserting leaves or raising hinged flaps. Still others stack or nest, taking up little room as a set, but offering flexible, readily available solutions when extra table space is required.

Wheels or casters make the tea cart or trolley an especially mobile type of table—and not just for displaying the tea service. Now there are carts made specifically for the heavier objects which have become basic to modern living—television sets, microwave ovens, and food processors among them—that roll such objects effortlessly from one location to another whenever necessary. Other trolleys are designed to accommodate lighter, though no less useful, objects: they will keep towels and sundries readily at hand in the bath or guest room, for instance, or make it easy to indulge yourself with a lazy breakfast by rolling the coffeepot and plate of croissants right up to the bed.

Folding and Knockdown Tables

If you love to entertain even though your cramped quarters make it a daunting prospect, you are probably in the market for some type of folding table which can be whisked under the bed after the dishes have been cleared and the guests have gone home. There was a time when your only choice for accommodating dinner guests would have been a wobbly card table or two—hardly an appropriate base on which to display your best china and crystal. Happily, such ingeniously designed tables as those illustrated on the next few pages are readily available today, and any one of them is handsome enough to please even the most demanding company. Yet every one can be folded, or quickly dismantled, to store in a minimum amount of space until the next party or bridge game.

STADIO. Vico Magistretti is one of Artemide's most talented and prolific designers. His Stadio table, part of Artemide's Reglar furniture collection, is manufactured using an exclusive fiberglass-reinforced polyester process which gives the

collection its name. Reglar's color (choose white, green, dark brown, Chinese red, or light gray) is impregnated in the material rather than applied on the surface. It thus offers high resistance to nicks, scratches, and temperature

ARTEMIDE

Devotees of ultramodern furniture are usually attracted to the work of contemporary Italian designers who are producing many of the best avant-garde pieces available today. From its home base in Italy, Artemide Inc. works with many of those artisans to produce furnishings that are among the most dramatic and innovative to be found anywhere. But you don't have to travel to Italy to find them; Artemide maintains offices in New York, Chicago, Dallas, Houston, and Los Angeles.

extremes. Equally practical indoors or out, the Stadio table features legs that detach easily for storage in a minimal amount of space. It is shown here with a pair of Selene stacking chairs, also designed by Magistretti.

PLANO. Giancarlo Piretti's ingenious Plano folding tables are part of Castelli Furniture's PL Foldables series. Both round and square models are designed to collapse into neat quarters for easy storage, yet will provide plenty of sturdy support when in use. They are shown with Piretti's Plia folding chair, which has attained permanent status in the Design Collection of the Museum of Modern Art.

R-LINE TRAY TABLES. A quartet of TV tables with its own stand is certainly practical; no matter how much room you have to entertain, there will always be occasions when an extra table or two would be a plus. Quaker Industries makes these handsome, solid-oak tables with a matching storage rack; the table surface measures a roomy 14½ by 19 inches.

FOLDING TV/SNACK TABLES. While cheap veneer or metal tray tables are available in any discount store, you won't find sturdy, well-designed models such as these quite as easily. Akko makes its acrylic tray tables with matching stands, each of which will store four folded tables. The weather-proof acrylic makes them ideal for use on lawn or patio, so you won't have to worry if you forget to bring them in from the rain. All of Akko's

tray tables feature clear acrylic rod legs; tops can be had in matching clear acrylic or in red, white, or black.

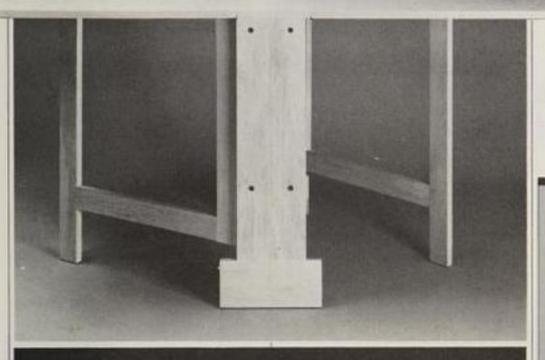

errolle. The Etoile table at far left, designed by Anna Anselmi and available through Bieffe U.S.A. and Furniture of the Twentieth Century, is constructed of sheet and tubular steel finished in your choice of white, gray, yellow, red, maroon, green, or black. When not in use, it folds for easy storage, or can be hung neatly from the wall.

cumano. The Cumano folding table, similar in both style and material to the Etoile, was designed by Achille Castiglione for Zanotta of Italy and is imported by Furniture of the Twentieth Century. Of sheet steel and steel rods, it is sleekly finished in red, dark green, dark blue, or black.

EARTHQUAKE. Tom Loeser's highspirited design is a contemporary work of art. Composed of fine woods (satinwood and ash are often employed), the Earthquake table is finished in enamels; by varying the colors and shapes used, Loeser insures that each table he completes will be unique. As a bonus, he puts the tables together with threaded rods running through the legs, making them easy to detach for storage.

FOLDING GATELEG TABLE. The infinitely practical gate-leg table is a boon to anyone for whom space is at a premium. As interpreted by

The Pottery Barn, it is constructed of clear lacquer-coated hardwood that is resistant to stain and never needs polishing. When fully open, it will seat six in comfort, yet it folds to a mere 10 inches in width.

THE POTTERY BARN

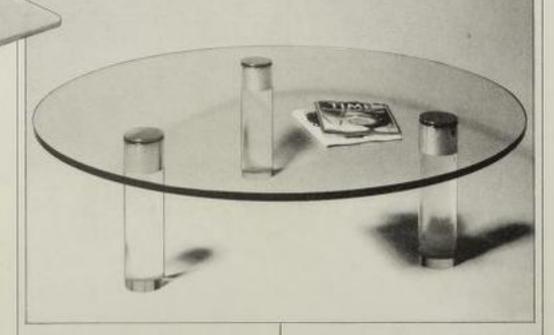

The Pottery Barn has achieved deserved popularity with thousands looking for home furnishings that are well designed, durable, and reasonably priced. Many of the chairs and tables featured by the company are designed to ship and store flat, but can be assembled in just minutes using ordinary household tools. For jobs requiring more complex assembly, the firm offers on-the-spot help; for example, if you order a vinyl-coated steel closet system whose shelves must be shortened to fit your tiny cubicle, it can be out to order while you wait, making your installation task much simpler.

DIRECTOR'S TABLE. If a table that folds flat for storage is the essence of practicality, how about one that folds and also adjusts to two different heights when you need it? The Pottery Barn director's table, made of lacquer-finished hardwood, has folding legs that slip into grooves on the underside of the tabletop to achieve either dining or coffeetable height at a moment's whim.

LYNDON COFFEE TABLE. Made of ash with beautifully crafted shiplap joining, this handsome coffee table features a square glass insert and gently rounded corners, and is finished in clear lacquer for ease of maintenance. Its three pieces simply notch together, making it easy to dismantle and slip under the sofa when you need extra room. Conceived for Placewares by its design subsidiary, LyndonDesign, the coffee table measures 30 inches square and is 15 inches high.

CIRCLE AND POST. Designer Michael Zevy Berkowicz combines glass, acrylic, and metal to create a table that has both classic and contemporary elements. His Circle and Post coffee table features a clear, thick glass top supported by three acrylic and metal posts. Both the posts and the caps which crown

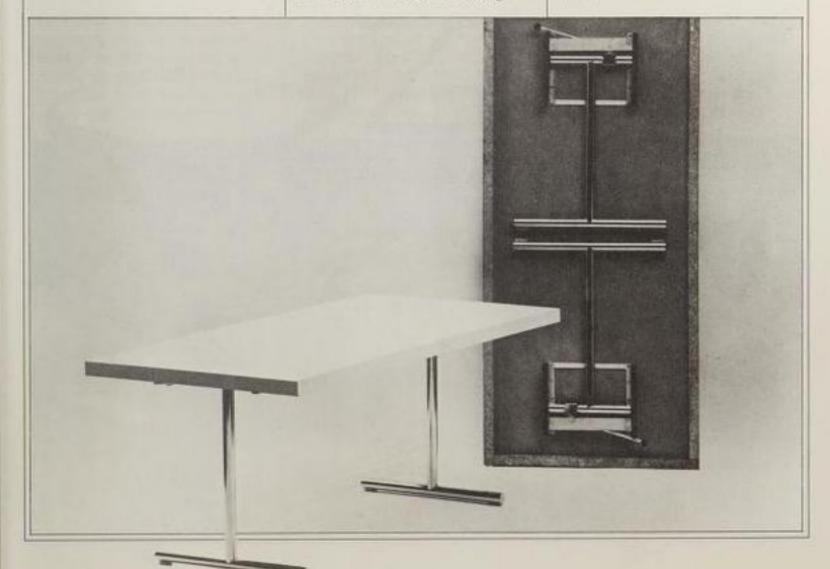

them are threaded, making them easy to unscrew when you need to dismantle the table. (Caps are available in chrome, brass, or acrylic.) If you prefer a more angular design, Plexability offers a four-legged square or rectangular version as well. Each is available in custom dimensions to fit your requirements.

TED. If you want to add a note of cheerful color and some muchneeded counter space at the same time, why not try Ikea's drop-leaf wall table? Designed by Niels Gammelgaard, the Ted table is made of epoxy-lacquered steel finished in bright red, electric blue, or sunny yellow (it's also available in black and white). The Ted folds flat against the wall when you don't need it, but, when you do, it measures a roomy 231/2 by 171/2 inches. Ikea also provides matching folding chairs and TV tables in the Ted series.

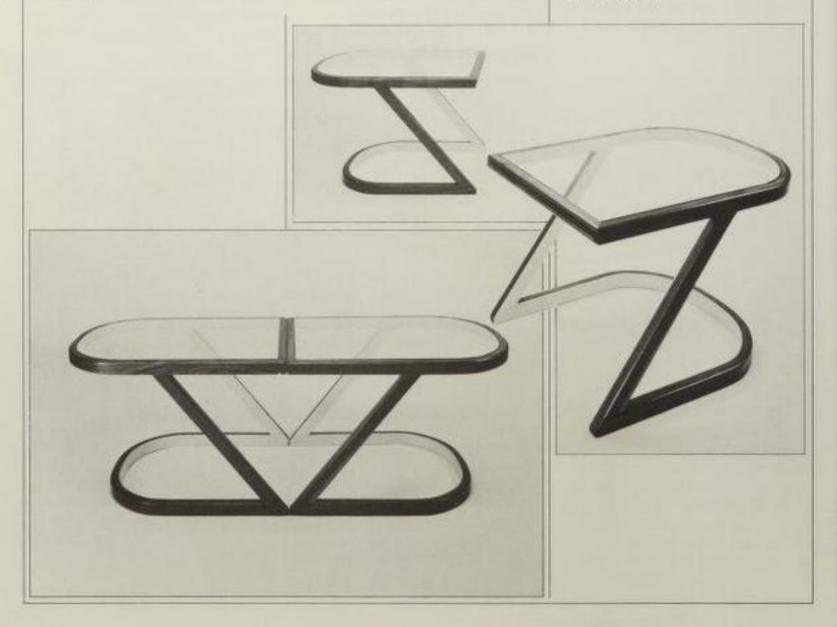

OMEGA. The original Omega table, designed by Hans Eichenberger in 1955, was selected for the permanent collection of the Museum of Modern Art in 1958. Since that time, Eichenberger's original concept has grown to include many models—desks, conference tables, and credenzas among them—interpreted in both woods and man-made materials. Stendig offers the Omega folding table in two sizes. 33 by 72 inches and 33 by 78 inches. Both are available in the standard dining and work height (28½ inches). The top is white plastic laminate; the base, steel tubing with a shining chrome finish.

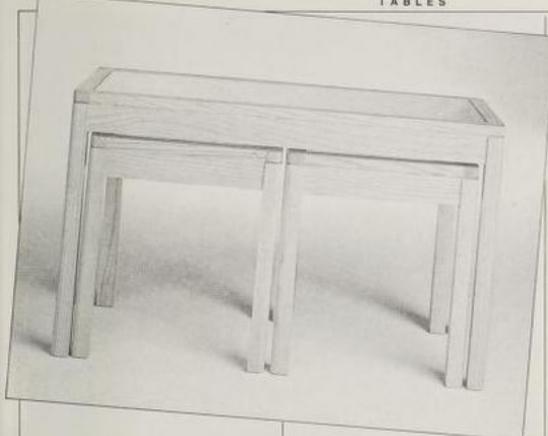

Stacking and Nesting Tables

Stacking or nesting tables offer unusual flexibility in just about any room setting. A trio of nested tables takes up little space, yet provides extra room for cocktail glasses or buffet dinner plates at a moment's notice. If you purchase such a set for a tiny studio apartment, they will be equally useful when you move into your first house or a roomier apartment. Carefully chosen for style and durability, they can go from living room to bedroom or den with great aplomb and will still be available to pull out if needed for special functions. Several of the models featured in this section can move inside or out with equal ease, as they are composed of modern materials that remain impervious to cold or damp; others are modular units that will look well whether butted together for maximum tabletop space or used as single pieces beside separate chairs.

Z TABLES. From Xylem, his studio in Seattle. René Soulard creates handsome wood furnishings that reflect his respect for natural materials. His aptly named Z tables are not only useful pieces of furniture, but also strong sculptural compositions. Pushed together, they can serve as a coffee table (each stands 18 inches high); separated, they are excellent end or cocktail tables. Soulard uses the same dramatic "Z" design for dining room tables and chairs; you might like to have a matched set.

WATERFALL WIDE-BEND. It would

sions when this trio of clear acrylic

When you realize that they double

be easy to imagine many occa-

nesting tables could be useful.

plies comfortable cushions for them, they become even more practical. Akko offers the same sweeping design with casters added for greater mobility. The

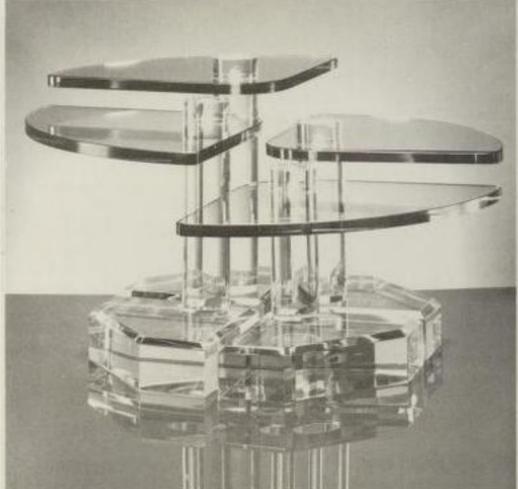

largest table shown is 17 inches

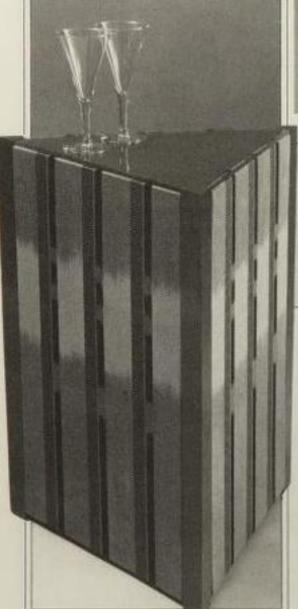

SCARTHIN NICK. Ronald Carter's trio of nesting tables was designed for Britain's Peter Miles Furniture and is imported by Interna Designs. The spare, angular lines of the pieces would blend well with many furniture styles. Composed of ash, the tables feature glass tops for easy maintenance, but can be built of solid hardwoods if you prefer. The largest table measures roughly 36 inches long and 16 inches wide and stands 19 inches tall. The twins beneath it are 161/4 inches square and 16 inches tall.

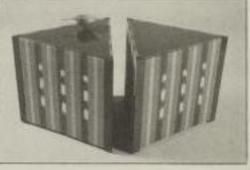

high and nearly 20 inches wide; the smallest, 15 inches high and 161/2 inches wide. Cushions are offered in a number of fabrics, including weatherproof vinyl, or you can supply your own material.

Berkowicz's quartet of glass and acrylic tables features green-tinted glass tops and heavily beveled acrylic bases. They can be grouped together, as shown, to create an interesting multi-level table (the whole, 27 inches in diameter), or used separately or in smaller groupings. Plexability offers custom sizes to suit your requirements.

TRIANGULAR TABLES. Liza Lamb puts her handmade fabrics to a number of uses, such as attaching them to screen panels and to paneled tables like these. The tops are glass, and the panels are 24 inches high and 18 inches wide; a pair of her tables would serve equally well flanking a sofa or placed together at one end for a squared-off effect. Lamb will custom match her cotton fabrics with the interiors of her clients' homes on special request.

LIZA LAMB

Liza Lamb's furniture incorporates her beginnings as a weaver with a later interest in lacquered wood forms. The blending of her handweven cottons and angular pieces works extremely well, since Lamb's textile designs tend to the geometric and their patterns often. mirror the shapes of the furniture pieces. Among the items Lamb commonly makes available are several occasional tables and a handsome wood and fabric screen. She frequently takes on special commissions, working with: architects and designers to create custom pieces for contemporary interiors

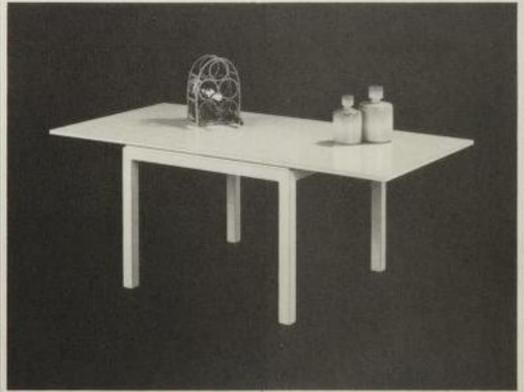

NESTING TABLES. Sheet steel laminated in a wide choice of colors (including bold blues, reds, and yellows) is molded to form this set of nesting tables for Amisco. The largest of the three is 17½ inches tall and 22 inches wide; the smallest, 14½ inches by 16 inches. The company offers a variety of laminated steel tables to mix or match with its nesting set: trolleys, coffee tables, and bed-side tables are just a few of the choices.

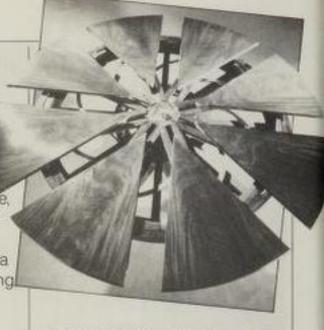

DEMETRIO. Part of Artemide's Reglar collection of fiberglassreinforced polyester furniture, Demetrio was designed by Vico Magistretti as a sleek, minimally styled low side table that can be stacked in innumerable ways to form a higher table or étagère. Artemide makes both the side table and Magistretti's larger occasional table (not shown) in white, green, dark brown, Chinese red, and light gray. (You might want to combine several colors for an interesting effect).

Extension/Expansion Tables

As the average square footage of new houses and apartments has shrunk in recent years, so, too, has the amount of space devoted to dining rooms and breakfast nooks. As a consequence, formal dinners for more than four people or so have become difficult to engineer. A buffet supper, with its attendant plate and glass juggling, is one solution. It is possible, however, to choose a compact table that will seat at least two people comfortably during normal use, yet provide the flexibility of expanding to double or triple size for special occasions. Most of the extending tables shown on these pages are small enough when closed to keep against a wall where they won't impede traffic flow, but can be pulled out and enlarged to accommodate a sizeable group at a moment's notice. So invite the crowd with impunity, take the folding chairs out of the closet, and enjoy the feast.

FLIP FLOP TABLE. Whether you choose General Mica Corporation's Flip Flop Table (right and above) in a 30-inch square size or in the larger 36- or 42-inch versions, at the flick of a wrist you can have a surface exactly double the length of the original anytime you need it. (All three models are a standard 29 inches high, and come with 21/4- or 3-inch square legs.) No matter which model you select, General Mica will provide a wide color choice of decorative laminate finishes.

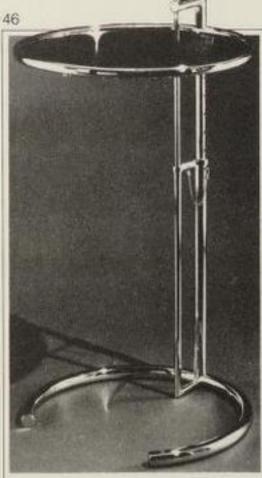

Henry Kotzian created this unusual circular extension table. When the eight pie-shaped sections are moved apart (they are affixed to a track, so a slight turn of the table separates them), eight arrow-shaped leaves can be inserted to double seating from six to twelve. The table's diameter without leaves is 60 inches, with leaves, 84 inches. Greenbaum makes the table available in a number of luxurious woods.

45

TEAK TABLE. Teak is among the most handsome and mellow of woods, appropriate for any number of home furnishings. Scandinavian Design uses it to form a classic, functional dinner table finished with teak edging and solid-brass hardware. As the two illustrations below show, it

would make an attractive sideboard or hall table when closed. Yet, simply by extending the top, it becomes a roomy dining table (expanding from 20 to 40 inches in width). Static dimensions are its length (63 inches) and height (28 inches).

EILEEN GRAY TABLE. This classic bedside table was designed by Eileen Gray for her own home on the French Riviera during the 1920s. The smoked-glass top can be raised or lowered on its tubular steel frame using a simple locking mechanism (maximum height is 361/4 inches). The Gray table is represented in the Museum of Modern Art's Design Collection and is available through the Museum and from Palazzetti.

47

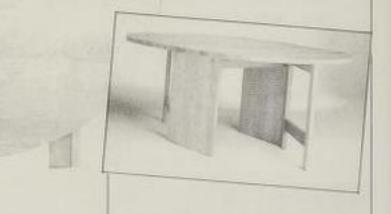

KORPI. Ikea's Korpi drop-leaf table is made of solid spruce finished with a clear lacquer to retard stains and provide easy maintenance. With the leaf extended, it measures 66% inches in length; closed, it is 47½ inches long. Korpi is just one of several practical drop-leaf tables lkea can provide. Each is available with matching chairs and buffets; some of the tables can be ordered with an extra detachable leaf for even greater flexibility.

gently rounded drop leaves are extended, this handsome oak table measures a generous 68 by 42 inches. (larger sizes are available). When both leaves are closed, the table top is reduced to 26 inches in width. Strictly Coun-

try will finish the wood in a light, medium, or dark oak stain to suit your taste, or will craft it of cherry, if you prefer. The company also offers a rectangular version of this eighteenth-century style, which it calls the Harvest model.

witney drop-leaf table. The standard version of this solid-ash dining table (right) will seat up to eight people, but Interna Designs will import it in any size to meet your requirements. Designed by Ronald Carter for Peter Miles Furniture, it is composed of a planked three-piece top resting on two solid ends. The leaves are hinged with brass. When both leaves are dropped, the table is only 22 inches wide; with leaves extended, a roomy 70 inches.

MACKINTOSH DINING TABLE.

Charles Rennie Mackintosh (1868-1928) was a Scottish designer and architect closely identified with the Constructionist and Art Nouveau schools. While his designs have inspired many other artists in the years since his death, his mastery of geometric forms remains his own. Atelier International, under license from the Mackintosh estate, has reproduced a variety of his tables and chairs, including an oval drop-leaf dining table (shown here with a pair of Mackintosh armchairs), which measures nearly 70 inches in width when extended. It is made of solid hardwoods with mortise and tenon construction and is finished with black ebony stain.

49

Tea Carts and Trolleys

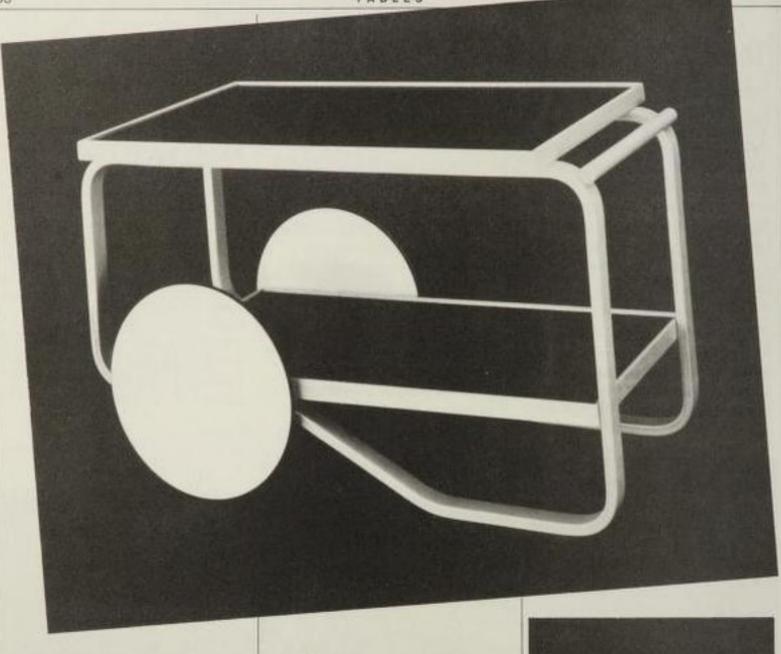

While tea carts and trolleys are not essential pieces of furniture, they are certainly utilitarian ones, whether used indoors or out. Casters or wheels make it easy to roll them out of the way when not needed, but many of the current designs are handsome enough to be on permanent display in a living or dining room. Some have removable shelves which can do double duty as trays; others fold compactly so that they can be stored until needed. Contemporary uses are practically unlimited: special models are designed as "entertainment centers," with shelves specifically made to accommodate the television set, the VCR, and even the stereo system. Other trolleys, intended for use in bedroom or bath, serve as moveable storage pieces for towels, sundries, and even clothes. And still others are fitted with butcher-block tops, adding much-needed counter space to a tiny kitchen, while providing extra storage below.

FOLDING TROLLEY. Designed by Louis Lucien Lepoix and manufactured in West Germany by FRZ-Mettallwarenfabrik, this sturdy trolley folds for storage to a width of only three inches. Self-locking handles on each side easily open and close the collapsible metal frame. Plastic-coated in white or black for easy cleaning, it is shown here with Giandomenico Belotti's Spaghetti Chair. Both pieces are from the Museum of Modern Art's Design Collection.

THE MUSEUM OF MODERN ART

While good contemporary furniture design is represented in thousands of retail outlets around the world, only the best can be found in the permanent collections of the world's great museums. Happily for devotees of its collections, the Museum of Modern Art makes a number of pieces from its permanent holdings available to the public via its retail store and its catalogues. Among the artists whose extraordinary work is represented in the Museum's current offerings are Alvar Aalto, Vico Magistretti, Ettore Sottsass, Jr., Eileen Gray, and Richard Sapper.

AALTO TEA CART. Alvar Aalto designed this tea cart in 1936, though its contemporary lines could have been conceived yesterday. Manufactured by Artek in Finland, it is represented in the Design Collection of the Museum of Modern Art and available from the Museum and from Palazzetti. The Aalto trolley has a frame of solid natural birch and shelves of glossy black linoleum. Twin white-lacquered wheels with rubber treads enable it to be rolled smoothly from place to place.

BUTLER. Designed by Sottsass Associates and available from Bieffe U.S.A., the Butler dumb-waiter is sturdy enough to take outdoors but attractive enough to use inside as well. Equipped with casters, it rests on four thick legs available in black, gray, white, yellow, or red. The blue or black shelves are removable, as is the bottle rack. The whole is framed with chrome tubing.

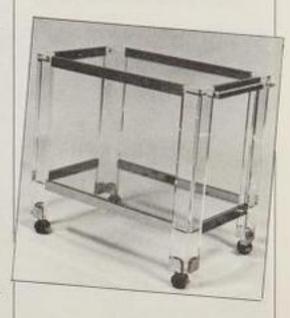

TEAK TROLLEYS. The everwidening popularity of VCRs and home computers presents a new design challenge for furniture manufacturers: to provide specific pieces that will accommodate these high-technology wonders while retaining the overall feeling of a more traditional decorating HUTCH-TOP GOURMET CENTER. The open shelf of Van Pelt's practical Gourmet Center is designed to accommodate a standard microwave oven: small appliances can easily be stored behind the woodhandled doors beneath it. Van Pelt offers its hutch-top model with a laminated finish (either white or simulated oak) for easy maintenance; it rests on four heavyduty casters which make moving it a breeze. Like most of Van Pelt's furnishings, the center is shipped knocked down, but can be assembled easily using standard household tools.

scheme. One solution, of course, is to hide the machinery behind closed doors. But if constant use demands that the computer and the television remain readily accessible, Scandinavian Design offers two teak trolleys that are both handsomely styled and practical solutions.

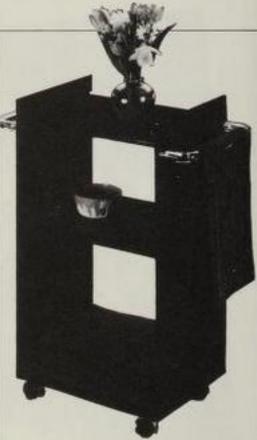

MOBILE SERVICE CART. Clear acrylic and bright metal accents are featured in General Mica's rolling trolley, one of many pieces in the company's Brenner Collection. A matching portable bar (not shown) will rest easily on the bottom shelf; the bar has a rack that accommodates ten stemmed glasses, with space for several bottles between them.

SERVING CART. Clear acrylic is teamed with chrome-hooded casters in a sleek, modern trolley from Akko which measures 27 inches wide by 16 deep and a generous 35 inches high. Its three spacious shelves are an especially useful feature, as is its weatherproof material, which enables you to wheel it from patio to house and back again without fear that it will be affected by rain or discolored by sun.

BATH/BOUDOIR CART. Offered in either clear or black acrylic or in a combination of the two (with clear sides and black shelves), Akko's useful bath cart rolls easily on four casters. It provides three roomy shelves for towels and supplies, along with handy towel racks on either side. Only 13 inches deep and 24 inches wide, it could be stashed in a corner when not needed.

AKKO

In its factories in suburban Boston, Akko makes occasional furniture and accessones from acrylic, a medium that is not affected by light or moisture and is easy to maintain in sparkling condition with just mild soap and water. The company's offerings range from trolleys and vanities to chairs and bar stools (some available with removable cushions for extra comfort).

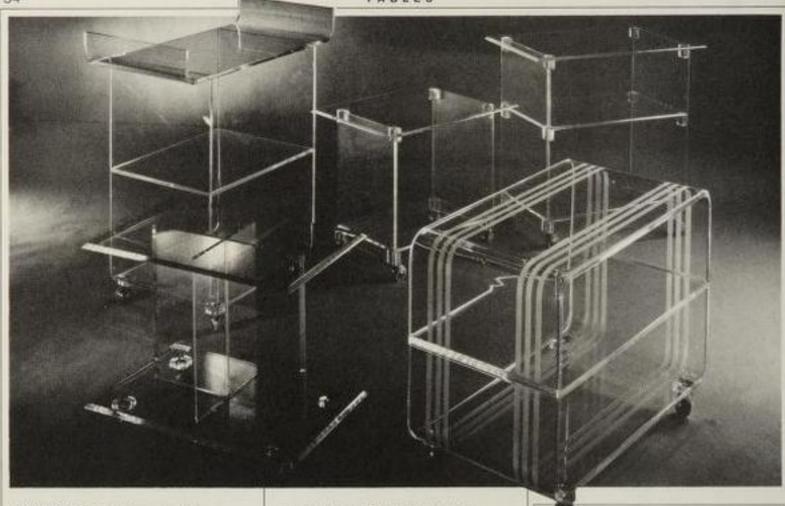

TEA TROLLEY. This three-shelf acrylic and glass tea trolley was designed by Michael Zevy Berkowicz of Plexability. Its wheels permit easy mobility; the graduated glass shelves provide ample room for food and service pieces. Plexability offers the trolley in a standard size (36 inches long by 16 inches wide and 36 high), or it can be manufactured in custom dimensions to suit your requirements.

MOBILE SERVER. Two compartments, each containing an adjustable shelf, are contained within the double doors of Henredon's brass-trimmed wooden server. The top opens to a roomy 76 inches, exposing a heat- and alcohol-resistant black laminate surface. When closed, the piece measures 38 inches in width by 18 inches deep.

ELFA KITCHEN TROLLEY. This wire basket storage trolley is comprised of modular components chosen from Sweden's Elfa system. Available in North America from Placewares and Lynk, the Elfa system offers 23 frame sizes and 31 basket sizes; you can stack various components or clip them side by side in virtually endless arrangements. Topped with a maple butcher block (or a Birch or Formica top, two other options) and fitted with four casters, the model illustrated would be an immensely practical addition to a small kitchen.

TV TABLES. Unless you still treasure that old behemoth console-model television and don't mind straining your back every time you need to move it, chances are that you have a somewhat more manageable portable set. Even so, you need a place to put it. Why not choose

STRAJK. Designed by Tomas
Jelinek for Ikea, this useful serving table is made of particle
board on a chromium-plated steel
frame. The particle board can be
finished in pine or teak veneer or
in a white lacquer coating. In addition to its roomy top and bottom
shelves, it features a handy
magazine rack, just the thing to
hold the Sunday paper for
breakfast in bed, or to keep the
weekly TV listings close by a
favorite easy chair. The open

one of these Plexiglas trolleys from Plexi-Craft? Each will provide welcome additional shelf space and display the TV in style. design of the Strajk cart permits it to be drawn close to the bed or sofa: the bottom shelf is low enough to slip under many pieces of furniture, so that the tea, or lunch, or cocktail, can be placed within easy reach.

CHAPTER 3

Beds

Sofa Beds and Trundle Beds

Fold-Down and Folding Beds

Futons and Low Platform Beds

Surprises

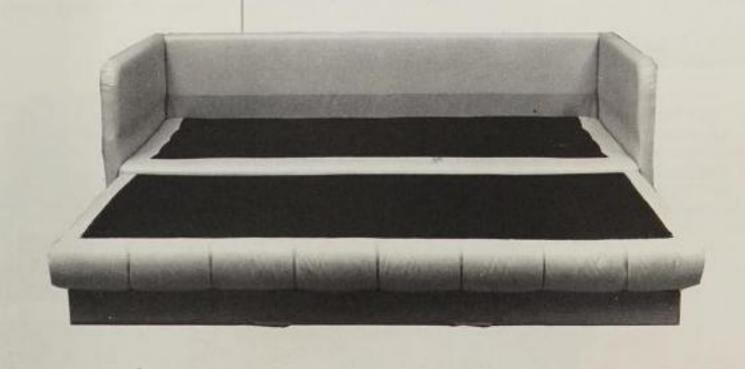

Beds

nless you are a hopeless insomniac, the bed you select will be the item of furniture that you use the most regularly over a period of many years. It should therefore be chosen with great care and attention, not only to its style, but to the quality of its construction and to its durability. Yet no matter how well made, a standard mattress and box spring combination is heavy and awkward to move, whether you just want to do the annual heavy cleaning or are being transferred to another town. It is also a space hog, taking up more proportional floor area than just about any other piece of furniture (with the possible exception of a treasured grand piano).

Even if you have a wonderfully roomy bedroom and can select a luxurious queen- or king-size bed to put in it, there will probably be occasions when you would like to accommodate overnight or weekend guests. But with available space generally at a premium, the living room or office at home may have to do double duty as a guest bedroom. (For ideas on how to enlarge the capacity of a child's bedroom, see Chapter 8). Fortunately, there are lots of alternatives to the standard bed, alternatives that will not only provide a good night's sleep for you or your occasional visitors but serve other useful functions after the alarm goes off in the morning.

By far the most common choice is the convertible sofa or sofa bed. This is one piece of furniture, however, that you definitely should not stint on, especially if it will be used on a daily basis. Even if you only open it up for guests once in a great while, pick one that is sturdily made and that has a firm, comfortable mattress. Cheap sofa beds may save money in the short run, but they will do nothing for your-or your guest's-back or temper. You might, instead, opt for a light, portable Japanese futon, which goes from chair to bed at the flick of a wrist. Or choose a total storage system which provides a fold-down bed plus lots of space for clothes and collectibles, though it juts out only a foot or so from the wall. Or select a well-upholstered easy chair, always a welcome addition to any living area, but even more welcome if it hides a bed that can be utilized at a moment's notice. Or pick a coffee table that does double duty as a queen-size bed. Any one of these options will allow you the regular use of a great deal of floor space that would be permanently lost with the addition of a standard bed.

Sofa Beds and Trundle Beds

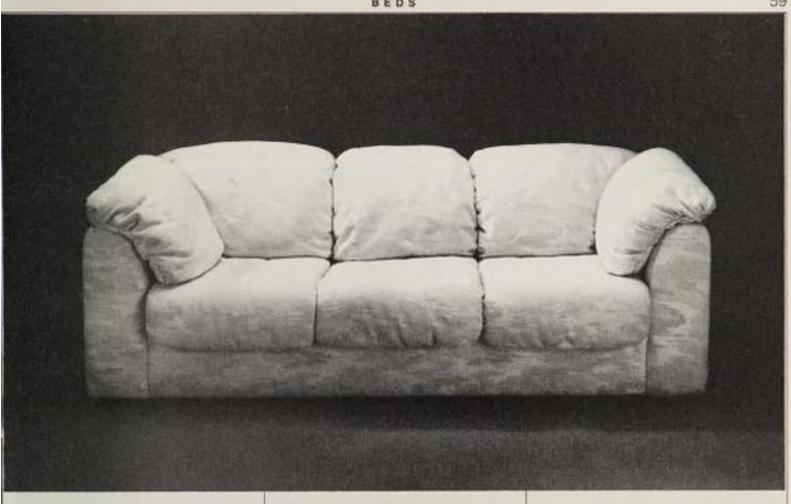

Whether you are in the market for a convertible sofa or trundle bed because your tiny living quarters can't accommodate the large brass bed you'd really like to have, or because you'd like the ability to put up an overnight guest occasionally, you'll want to give a lot of consideration to the type of piece you choose. A badly made sofa bed with lumpy upholstery and inadequate support will not wear well and is really nothing more than a thinly disguised torture chamber, even if it's only slept on once or twice a year. By the same token, a handsome, well-padded sofa bed or trundle with firm mattresses and solid construction will be a durable as well as useful addition to your living room or den. (Trundle beds designed especially for children are featured in Chapter 8.)

DUX INTERIORS

From its home offices in Sweden, Dux exports fine contemporary home furnishings to a New York showroom; its products are also available in many furniture stores across North America. The company's specialty is handsome, supremely comfortable beds, manufactured in various sizes with several different types of mattresses. For its beds, sofas, and chairs. Dux supplies hundreds of different uphoistery and cover tabrics. In addition, the firm offers several different wall storage systems composed of a variety of functional modular units.

RIVIERA. The Riviera is a superbly designed sofa that becomes a very comfortable bed whenever you need it. It can be used as a permanent bed for one in a studio apartment, or opens up to two free-standing beds, both with inner springs beneath the thin, washable top mattresses. Available with either one or two arms, the Riviera has an optional drawer in the base to store extra bed coverings. Dux Interiors offers a wide choice of cover fabrics, or you can supply your own.

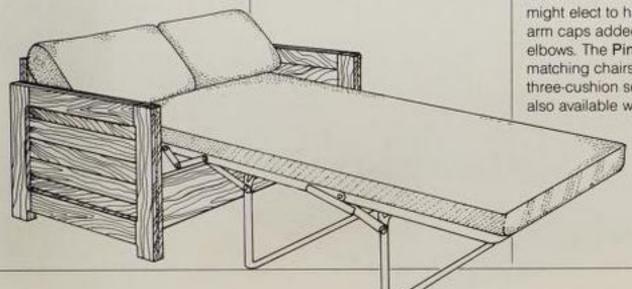

RIVERDALE. A generously sized sofa (87 inches in width) which opens to reveal an equally generous queen-size bed would be a practical addition to just about any living room or den. Scandinavian Design makes a durable, hardwood-framed sleep

sofa with careful attention to detail. Joints are double-dowelled, glued, corner blocked, and carefully reinforced. A matching love seat and chair are also available, all upholstered in a choice of cotton blend fabrics.

> SLEEP LOVE SEAT. Handcrafted from kiln-dried Southern yellow pine, this love seat/sleeper can be upholstered in a wide choice of fabrics. For extra comfort, you might elect to have cushioned arm caps added to cradle your elbows. The Pine Factory makes matching chairs, recliners, and three-cushion sofas (the sofa is also available with a hidden bed).

DAKOTA. Not only does the stylish Dakota sofa open to a comfortable double bed, but it has other practical features reflecting the careful thought that went into its design. The cover is made of quilted cotton and is removable for machine washing. In addition, the Dakota sports two detachable armrest cushions, each with a convenient pocket on the outside where you can stash a current book, magazine, or the daily paper. The Dakota is just one of a number of good-looking sofa beds available from Ikea.

WHITE LACQUERED TRUNDLE

BED. The bottom section of this trundle bed, when pulled out, rises to the same height as the top section. When the bed is not needed and the top is piled high with pillows, it would make a cheerful addition to any informal setting. The Workbench offers its trundle bed in a white lacquered finish that is easy to maintain, or in teak or oak veneer.

AMISCO TRUNDLE. Made of steel tubing with a colorful lacquer coating, Amisco's trundle bed can be ordered alone to slip under a bed or sofa you already have, or as an adjunct to the company's handsome single bed frame with gently curved head and footboards (as shown). The trundle rolls on casters, so it can be whisked out and unfolded at a moment's notice. (Mattresses are not included.)

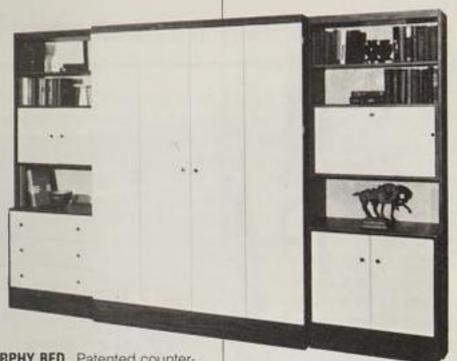

62

Fold-Down and Folding Beds

While fold-down wall beds are a boon to anyone who has to make a comfortable home from a one-room apartment, they also can be a bonus to those for whom space is not so critical. One of the side benefits of most wall-folding bed systems is their cabinetry—generally available in a choice of modular units—which can supply welcome added storage space for off-season clothing, the mushrooming book collection, the best china, and much more. And, of course, the cabinets provide durable and comfortable extra beds that are hidden from view until needed, but which can be made available at the touch of a finger. If a complete wall sleeping system is too ambitious for you but you'd still like to have an extra bed available, you can choose a compact, single folding bed that is easy to store and can be rolled out whenever you need it.

AVANTI. Offered as part of the Dux Avanti wall system, this fold-down bed is available in five sizes, with the practical Dux thin top mattress laid over an inner spring mattress for extra comfort. In any size, the bed is available in either a soft or firm model. The flanking wall units come in endless variations and can be tailored for any interior. Modules are offered that encompass everything from dining tables and desks to wardrobes, television sets, stereo systems, and refrigerators.

THE MURPHY DOOR BED COMPANY

William Murphy, who founded the company that bears his name in 1900, was inspired by need to create his famous fold-down wall bed: his first tiny apartment in San Francisco was made even more cramped by the bed, which took up most of the available space. The Murphy Door Bed Company, which is run today by William's grandson, concentrates on providing fold-down beds that take up a minimum of space when closed and are virtually effortless to operate. The proof of the firm's success is in the name "Murphy Bed"-a trademark which is often misused to refer to any similar wall-bed system.

MURPHY BED. Patented counterbalance units make it easy to operate the Murphy Door Bed Company fold-down bed. Many models and sizes are available either with flanking cabinets or without, so that you can supply your own storage units if you like. (One of the company's newest models folds down from a sidewise, rather than a lengthwise, position-a particular boon if your room is quite narrow.) Each bed has a built-in box spring; you supply the mattress. No matter which model you choose, when folded into the cabinetry it will take only 12 or 13 inches of valuable space from the width of the room.

64

ROLL-A-WAY COT. If you are blessed with ample closet or basement space for storage and don't really need a complete wallfolding bed system, but would like the capacity to accommodate unexpected overnight guests, you might want to consider one or two of Thonet's handy folding cots. Far sturdier than the usual rickety product on the market, and available in twin size only, the cots are constructed of durable steel and move easily on four swivel casters. Thonet supplies the mattress.

EUROBED. Unlike most fold-down wall beds. Sico's Eurobed is supported on either side by its custom cabinets and thus does not have to be fastened to the floor. The bed pivots on vertical supports attached to the cabinets, making it effortless to maneuver; the legs fold up and over the mattress (which Sico supplies), holding it in place when it is raised. Optional accent lighting can be tucked behind the header. Sico offers seven modular wall system units to flank the bed. Whichever unit you choose, it will extend less than 19 inches from the wall when closed. Cabinets are finished in easy-to-maintain almond or oak wood-grain laminates.

Futons and Low Platform Beds

The spare, minimal lifestyle favored by the Japanese has become increasingly popular in the West; nowhere is that popularity more evident than in the use of the futon, which is now widely available in North America. Light and easy to move from place to place, it can be used as a chair, a chaise longue, or a bed. Ingenious built-in ratcheted frames allow its employment in all three ways without any additional supporting structure, but separate frames are offered that will accommodate the mattresses if you prefer to have something between you and the floor. By contrast, the platform bed is generally a large and cumbersome piece of furniture, usually composed of one or two solid hardwood forms which are difficult to maneuver. Happily, the concept of the platform bed is being reexamined by contemporary craftsmen who have retained its functional aspects while eliminating much that was awkward and unmanageable about the original.

DOOR STORE FUTON. White cotton duck with a red or black pencil stripe covers this twin-sized futon from the Door Store. A ratchet mechanism enables you to change the position of the futon quickly and easily; handy buckles keep it firmly in place when the bottom is folded underneath to form a comfortable, informal chair.

BEDCRAFT

Rick Miller has been producing handmade loft and platform beds since the mid-1970s. His new company, Bedcraft, specializes exclusively in the platform beds which he created with the help of noted furniture designer Peter Danko. Their careful work includes a thoughtful touch: all corners are rounded to minimize the danger of barking your shins, a hazard with the angular construction of most hardwood bed frames.

PLATFORM BED. Interlocking oak pieces fit together quickly and easily without tools to form a handsome platform bed that is easy to set up and take down whenever you like. Either left unfinished or given a final polish with oil or walnut stain, it is offered by Bedcraft in twin, double, queen, and king sizes. The ingenious design includes a storage section for extra blankets or seasonal items, reached by simply lifting the top. The light foam mattress is included.

THREE-WAY FUTON. A built-in ratchet frame enables The Pottery Barn's futon to be switched effortlessly from a chair to a lounge or a bed as the situation requires. Its Scotch-guarded cover is made of practical cotton duck and is available in either gray or red. The Pottery Barn packs the futon in a convenient carton with a carrying handle, so you can take it along to a vacation cottage or weekend house if you are so inclined, or stow it neatly in a closet when it's not needed.

FUTON SOFA-SLEEPER. During the day, this ingenious futon combination offered by Conran's is a comfortable sofa with matching end tables. By night, it can be turned into a cozy double bed simply by moving the twin tables in front of the sofa frame and unfolding the two futons on top of them. The tables and sofa frame are made of solid ash with red-stained legs; each futon is stuffed with cotton batting beneath a cotton cover. The sofa measures roughly 5 feet wide by 44 inches deep; each end table is 7 inches high and about 30 inches square.

FUTON RACK. Amisco's handy futon rack can be used in either of two positions. Unfolded, its steel mesh and tubing system provides comfortable support for a light mattress while elevating it off the floor. It can also be propped up as shown, so that the futon, draped over it, makes a cozy chair. Available in three widths (40, 54, or 60 inches), it is finished in a choice of colorful laminates. Amisuo also makes a fixed, L-shaped frame with its base flush to the floor. Both can be easily disassembled for storage.

Surprises

Sofa beds remain the most popular choice among people who require extra sleeping accommodations for occasional overnight guests or who can't fit both a standard bed and a roomy couch in the tiny studio apartment they occupy. But they are by no means the only option available today. Other, smaller pieces of furniture—including chairs and coffee tables—hide comfortable beds with mattresses that range from twin size to queen. All are totally unobtrusive when closed, but can quickly be made up when the unexpected guests arrive just before "lights out." Many of them are lighter and thus more portable than the standard convertible sofa—an added attraction if you move, or even if you like to rearrange the furniture as often as you change the bed linen.

well-upholstered armchair is a welcome addition to any living room or den. When it hides a comfortable single bed, it can be even more appreciated. Thonet offers casters as an optional

choice on all of its hide-a-bed chair styles, making them easy to move from one room to another, or simply to shift when you need to attack the dust beneath them. Convertible sofas are available to match most Thonet chair models.

HIDE-A-BED OTTOMAN. Part of Thonet's Devlin collection (which also includes an armchair and a two-cushion sofa), this comfortably padded ottoman hides an iron and steel bed mechanism which opens to provide a single (25 by 72-inch) bed. When the bed is unfolded, the top becomes a welcome headrest. The urethane-filled upholstered frame is available in a number of materials to blend with any decor.

68 BEDS

designed this ingenious upholstered table to match his modular seating units. Offered by Thayer Coggin, it is topped with stain-resistant laminate (available in a number of colors) and is offered in four sizes—from 47 to 71 inches in width. Beneath is a comparably sized mattress (from 37 to 61 inches wide) that is about 6 feet long. When the bed is pulled out, the table top becomes a useful headboard.

chaise longue is an inviting place to recline at the end of a long day. Milo Baughman's upholstered chaise offers that comfort and more: it also hides a full double bed. Depending on the configuration of the room you plan to put it in, you can order the chaise with either a left- or right-opening bed; Thayer Coggin will then cover it in your choice of fabrics.

THAYER COGGIN

From its factories in rural North Carolina, Thayer Coggin produces a wide range of contemporary furniture for both home and office. Modular seating groups, chairs, and storage pieces are the company's forte, in designs ranging from traditional to postmodern. Many of Thayer Coggin's sofas and chairs—and even tables—can be ordered with hidden beds, adding to their flexibility and usefulness. Once you've selected the appropriate upholstered pieces, you can choose coverings from an almost infinite variety of materials.

CHAPTER 4

Sofas, Love Seats, and Benches

Daybeds and Love Seats

Sectional and Modular Sofas

Benches

Sofas, Love Seats, and Benches

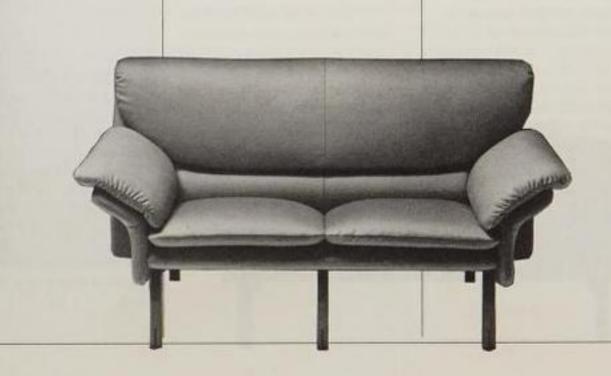

ith the exception of a confirmed hermit or two, we human beings are a gregarious lot. Even if we plan to live alone, chances are that one of the first items of furniture we purchase will be a sofa or daybed that can accommodate several people in comfort whenever the need arises. And because such furniture is usually quite sizeable and not inexpensive, we will select it with special care and with its overall proportions and their suitability to the space for which it's intended kept firmly in mind. Once that selection is made, other furnishings (occasional chairs, carpeting, tables, and lamps among them) can be chosen to complement it.

To those of us for whom space and mobility are paramount, a three- or four-cushion sofa will not be a practical choice, unless it hides a comfortable bed that gives it a second use. The multiple seating selections in this chapter, therefore, do not include large single units, though many of the manufacturers included can supply sofas in the same designs as the love seats or sectionals featured. Smaller-scaled and thus more portable modular sofas, love seats, and benches can provide ample seating without overpowering a too-small room or taking up more than their fair share of floor area. In addition, such pieces can be easily moved to a new spot

without undue difficulty, whether you plan to relocate them across the room or across the country. Their smaller size makes them more flexible, as well, giving you more than one choice of placement and the luxury to rearrange the room if need or desire dictates.

Certainly the most flexible of multiple seating choices available today is the modular or sectional sofa. Many styles are available in several different modules, from straight-backed armless units to corner or one-armed pieces, enabling you to select a combination to fit your requirements. Some of the modules are curved, some angular. All give you the option of designing an individual arrangement that is exactly right for your room.

You can also choose from a wide variety of love seats, daybeds, and benches. Generally designed to seat at least two people with plenty of elbow room between them, each can be used singly or in groups as your requirements demand, providing cozy seating in living room or den. Most of the benches are compact enough to fit comfortably in the front hall or entrance way, but light enough to move to the living room or the dining room table when you need additional seating.

Daybeds and Love Seats

If a massive three- or four-cushion sofa doesn't suit your design plans or fit the available floor area in your living room, you might want to try a daybed or a pair of love seats instead. Either is generally constructed on a somewhat smaller and lighter scale than a sofa and thus offers a more flexible solution to arranging furniture in a constricted space. Most love seats will accommodate two people comfortably; a pair of them placed opposite each other, perhaps with a coffee table between them, provides an inviting place for good conversation over a drink or a buffet supper. Daybeds are so named because of their utility: most will convert from seating to bed with no wasted motion or effort simply by removing a few cushions. Contemporary designers have created many styles that combine utility with good-looking sophistication appropriate for virtually any decor.

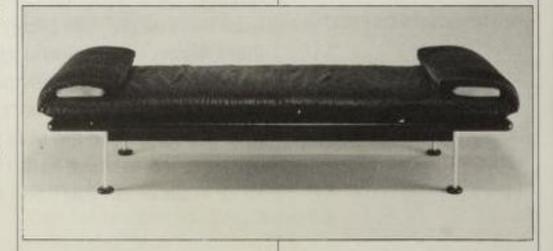

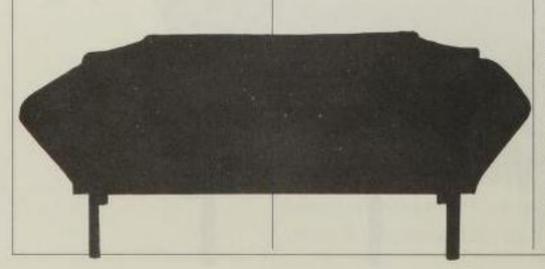

ALLEGRO. Designer Michael Knoll emphasizes the semi-lunar form in a softly molded love seat with radius edges; the overall effect is one of luxurious relaxation.

Brayton International offers

Allegro in a number of upholstery fabrics; you might choose a contrasting color for the supporting frame.

GRAFFITI. Designed by Burkhard Vogtherr, the Graffiti (right) is a spare, yet luxurious, daybed available in a wide range of fabrics and leathers. Brayton International combines a slab cushion with low bolsters at each end, the whole supported by thin ash legs. The frame can be finished in gray, ebony, or a natural tone. In any fabric and finish, the daybed measures 81 inches in length by 281½ inches wide and stands just 183¼ inches tall.

SHERWOOD GAMBE. The twin ratchet arms of Placewares' compact settee (left) adjust easily to any of six positions for reclining and sleeping as well as sitting. The steel frame is cushioned by a foam mattress covered in quilted cotton duck; two loose coordinating pillows are included. The Sherwood Gambe measures 59 inches in length with the arms raised; it opens to a 78-inch-long bed.

DOOR STORE

For the past thirty years, the Door Store has specialized in contemporary home furnishings which emphasize both good design and quality construction. Many of the company's pieces are selected with an eye to both practicality and portability. Among its daybeds and love seats, for instance, are a number which can be converted to beds any time you require extra sleeping room. Most Door Store furnishings are shipped knocked down, but can be assembled at home with a minimum of bother; heavier pieces often can be fitted with casters upon request.

LOVE SEAT AND SOFA. The understated design of the Door Store's matching love seat and sofa is echoed in the upholstery: each cushion is covered in a gray, white, and black cotton weave that blends with the gray-finished wood frames. The sofa is 77

inches long; the love seat, 52 inches in length. Matching cocktail and end tables are also available, each of the pieces can be assembled quickly and, conversely, knocked down for storage if you need to make extra room.

AURA. Whether you choose to have it made up as a love seat, armchair, or three-cushion sofa, Paolo Piva's Aura is a plump, inviting design with compact lines well defined by self-welting or contrasting welting of a different fabric or color. Stendig offers the Aura in a choice of fabrics and leathers; the beech legs can be finished in any one of a variety of color tones to complement the upholstery selected.

MISINTO. One of Greenbaum's newest imports from Busnelli of Italy (below), this innovative love seat is as practical as it is handsome. All cushion covers are removable for cleaning, and front rollers make it a breeze to move from one location to another. The wide, flat arms conceal turning trays that can be pulled out whenever you need them; detachable arm cushions can be moved to the back for use as comfortable head rests.

DAYBED. The romantic look of Amisco's steel-framed daybed belies its practical side: the back can be removed, converting it into a generously proportioned single bed (82 inches by 42 inches). The frame can be finished in your choice of colors (you supply the

mattress and decorative pillows); the matching trundle shown tucked beneath the daybed is optional (see page 61). As is the case with most of Amisco's home furnishings, the daybed is easy to disassemble for storage when you don't need it.

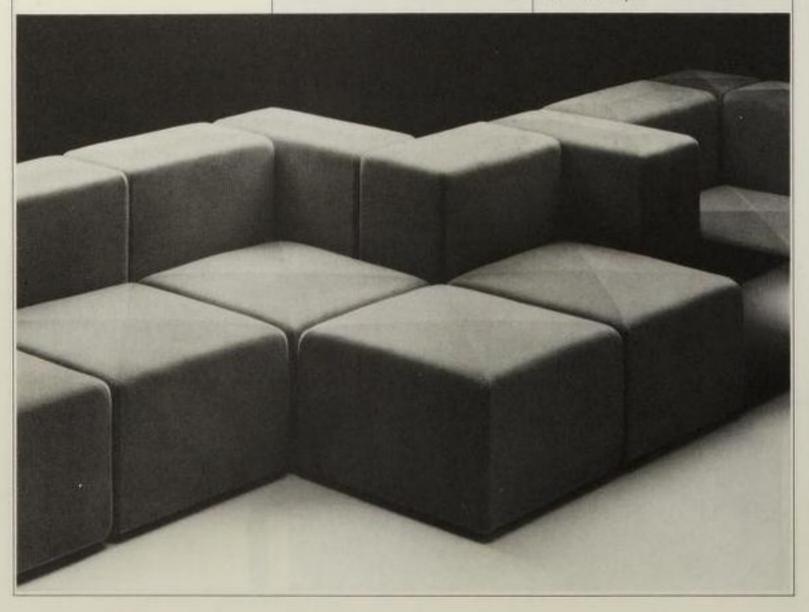

contatto settee. Contoured polyurethane cushions are layered to dynamic effect in an ultramodern settee made by Brunati of Italy for Axiom Designs. The result is a piece dramatic enough to be the focus of any modern setting and plush enough to seat two in great comfort. The metal frame can be finished in a color to match or contrast with the fabric you select from the company's extensive collection of upholstery materials.

Sectional and Modular Sofas

There is no doubt that sectional, or modular, sofas, offer the greatest flexibility in furniture arrangement. Once you have chosen a handsome seating group that fits your current needs, it can be easily adapted to conform to a new room should you move or wish to change its location within your home or apartment. Even if you don't move or have the luxury of several rooms to reconfigure, you can rearrange the pieces with the change of seasons or of mood. (You might want to place a cozy grouping in front of the hearth or wood stove during the winter months, but move it to a separate location in summer.) You could even elect to split up the units to form several groupings instead of one. No matter what arrangement of pieces you envision, you'll find any number of handsome designs and styles to choose among.

SISTEMA 61. Cubes of injected molded polyurethane can be arranged in virtually endless configurations according to the shape of your room and the effect you wish to create. Once you have positioned them to your satisfaction, they are secured with chrome-plated metal brackets. Castelli Furniture will upholster both seat modules and back/armrest modules in your choice of textiles. The seat modules measure 24 inches square by 16 inches high; the back/armrest modules, 271/2 inches high, 24 inches wide, and 12 deep.

HABANA SEATING. Designed by Stanley Jay Friedman for Brueton Industries, these plump, inviting armless units are stuffed with down and polyester for the ultimate in comfort. Each piece measures 27 inches wide by 36 deep and 29 high. No matter how many modules you decide to use, they can be upholstered in your choice of attractive, durable upholstery materials from the Brueton collection.

OTTAWA. Designed by DePas.
D'Urbino, Lomazzi for International Contract Furnishings, the
Ottawa modular sofa pieces are
composed of dacron-filled
cushions that rest on rugged steel
frames and springs. All upholstery
fabrics are secured with Velcro
closures for easy removal. Nylon
gripper feet hold the pieces
steady on floor or rug. Choose
among right- and left-arm units,
armless pieces, ottomans, and
two- and three-seat sofas.

DAMIER. All of the modules in the Damier grouping-corners. armless units, and curved pieshaped units which create the arrangement shown-are carefully scaled to fit small seating areas. (The biggest is just 31 inches in width.) Once you have selected a configuration to suit your room and have set the modules in place, leather straps with loops attached to the front and back of each connecting piece can be secured by means of a specially designed metallic pin. Arconas constructs its Damier collection with frames of steel tubing. A choice of fabrics and leathers is available; all materials zip on and off easily for cleaning.

THAYER COGGIN MODULAR SEATING. The basic angularity of

Thayer Coggin's modular units is offset by their gently rounded backs and softly molded cushions. Both armless and corner units are 34 inches wide and the armless units and matching ottoman (not shown), 31 inches in width. Choose among Thayer Coggin's wide range of upholstery fabrics. Specify model numbers 1850, 1851, and 1852 for ottoman, armless unit, and corner unit, respectively.

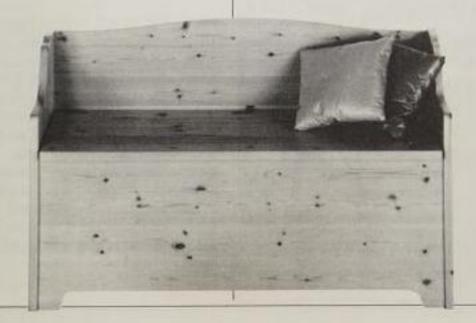

Benches

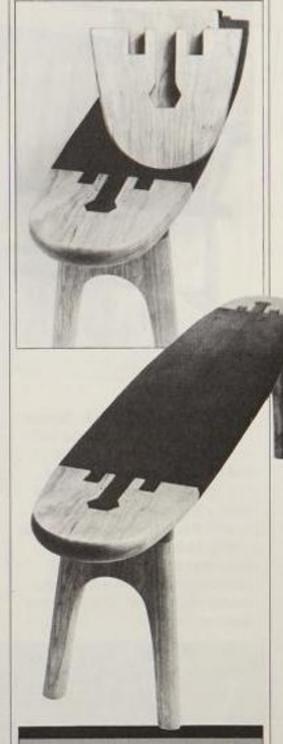

The lowly bench has come a long way from its humble beginnings; until well after the Middle Ages, it was one of the few pieces of furniture available to the commoners who were then (and are now) the vast majority of the populace. The craftsmanship that goes into many of the benches available today is such, however, that even the most discerning aristocrat could find a number of them appealing, to say nothing of the rest of us. In addition to their good looks, benches are among the more portable of home furnishings. Usually small enough to fit into an area too cramped to accommodate a padded love seat or sofa, they still provide seating for two or three people and can be moved from room to room to seat an overflow crowd. Some, such as the Ikea design shown below, even offer extra storage space beneath their seats.

PINE BENCH. It would be easy to think of a number of places where Ikea's simple pine bench would be useful, since its hinged seat hides an ample storage area. Put it in an entry hall to hold boots and umbrellas; in a child's room to organize a toy collection; in a roomy eat-in kitchen to store napery or utensils: the list is limited only by your needs and your imagination.

CHERRY AND WALNUT BENCH. Tom

Wessells was inspired by the ancient art of Japanese temple joinery to craft this cherry and walnut bench. Roughly five feet in length, the bench has no fasteners holding it together; the intricate shapes of the temple joints secure the contrasting wood pieces and contribute to the unusual design. The interlocking pieces come apart easily for storage.

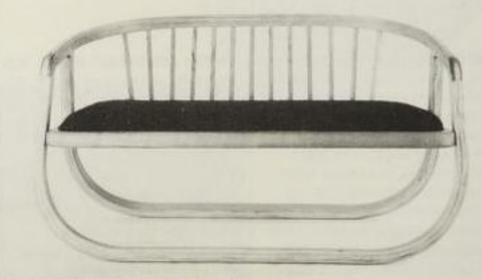

TOM WESSELLS

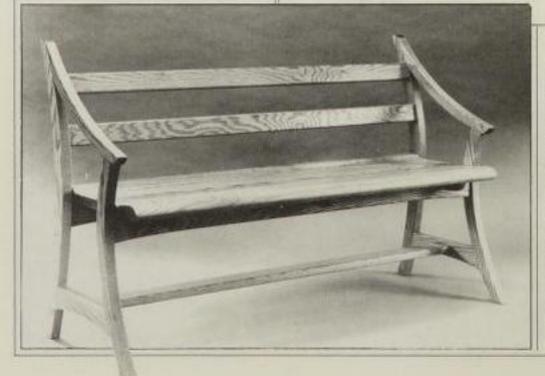

Tom Wessells is a gifted artist whose medium is fine wood. Many of his original furniture designs have been exhibited at galleries and museums throughout the Mid-Atlantic area. Working in his Virginia studio. Wessells concentrates on special commissions and has executed a wide range of furnishings and architectural details, from side chairs and coffee tables to highboys, sofas, and mantles.

DEACON BENCH. The classic lines of Strictly Country's deacon bench would make it suitable for either a period or a contemporary interior. It is available in either a four- or five-foot length (specify model S10019 and S10020. respectively) and can be made of either oak or cherry, as you prefer.

CALDWELL BENCH/SETTEE. Steven Caldwell has been honored with many awards for his furniture designs, all of which are made only to custom order. His careful artistry is evident in the graceful lines of this settee, whose ash seat is suspended on a bentwood laminated frame. Caldwell will upholster the seat in a fine handwoven wool or will supply another fabric you specify.

PRINCETON BENCH, Artisan Peter Korn invites commission work and is happy to create one-of-a-kind furniture to your order. Among the handsome pieces he can supply from stock is the Princeton bench, whose angular sections are wedded using three different wood joints: mortise and tenon, inverted tenon, and sliding dovetail. Made of oak with a rich tung-oil finish, the bench measures 60 inches wide by 35 high and is 21 inches deep.

CHAPTER 5

Desks and Work Units

Desks

Work Units

Desks and Work Units

here are hundreds of thousands of people throughout North America for whom a 9 to 5 office job is anathema. Yet practical considerations usually dictate that the rent and utility bills be paid. And there are thousands of others who must start to earn extra income to help support the ever-increasing cost of living, but for whom an outside job may not be possible because of other responsibilities. For all of those people, an office at home is a necessity of daily life. Chances are that the rest of us need a quiet space in which to balance the checkbook, prepare the tax return, and organize the pile of bills (paid or unpaid) which accumulates so rapidly. Yet many office supply companies feature desks and other work units more appropriate for a boardroom than for the corner of the living room or spare bedroom that has to be commandeered for the job. Many of their offerings are massive pieces of furniture that not only look inappropriate parked next to the guest bed or parlor sofa, but usurp too much space in the bargain.

Fortunately, as demand for small-scale yet practical office furniture increases, home furnishing suppliers are augmenting their repertoires with a variety of desks, typing tables, and work tables specifically geared to personal use. Many companies offer understated designs

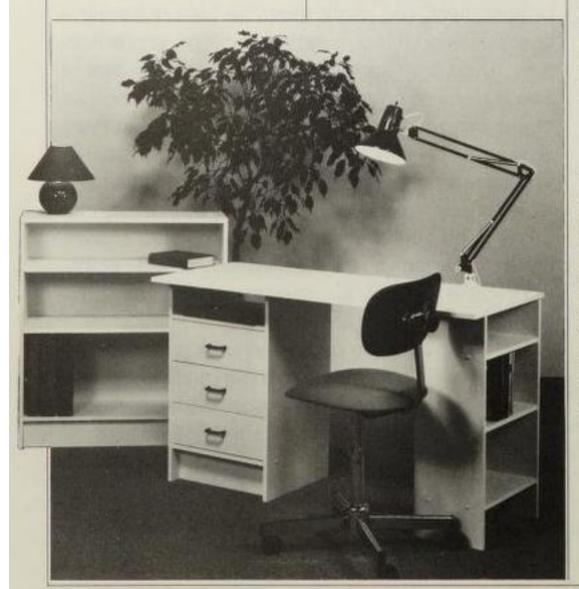

that will blend unobtrusively with the other accoutrements of personal life, yet are as functional as they are handsome. There are desks that can be ordered to match bedroom furniture and can double easily as both work area and dressing table. Many contemporary desks can be folded or disassembled for storage if you need extra room. Others feature convenient hinged flaps that can be raised to increase the work surface, but that, when folded, don't take up a lot of unnecessary space that you would rather have available for other functions. Still others are modular designs that permit you to choose exactly the right components for your purpose.

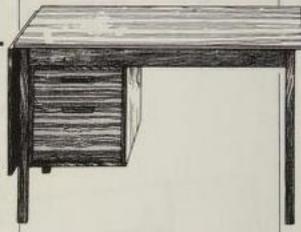

Even if you don't need a complete office that will allow you to perform a full- or part-time job within your home or apartment, you might relish the idea of having a spacious work table on hand for special projects or hobbies. If you are reluctant to apportion the amount of space required on a full-time basis, or if the confines of your living quarters make it impossible to do so, there is still a solution. In fact, there are a number of possibilities to choose among. For example, many drafting and art tables are designed to fold compactly so that they can be removed from the room when the project is completed. Yet when you set them up, they provide ample work space and can be angled to just about any position that the task dictates.

The key to all of the desks and work units featured on the following pages is their flexibility and their utility—two benefits which make them especially welcome additions to just about any home environment.

Desks

Whether you are clipping coupons, answering mail, paying the monthly bills, or writing a book, you might like a special place to keep all of the paper those and many other tasks tend to generate. Even if your space is limited, you don't have to spread the mess out on the dining table and put it away when it's time for lunch. There are a number of compact, utilitarian desks available that will enable you to organize your paperwork with ease and provide plenty of writing space in the bargain. Some have hinged flaps that provide lots of elbow room when raised; when lowered, however, they allow you to stash the desk in an unobtrusive corner out of the line of traffic. All the desks featured here have in common the generous drawer space they provide for the storage of check stubs, correspondence, and the rest of the paperwork that is one of the curses of daily living.

stide-top desk. When its hinged flap is down, the Door Store's teak veneer desk is just 45½ inches wide. Whenever you need additional space to spread out papers, just slide the top over to bring up the flap, and you'll have a generous 65 inches of width. Two convenient drawers under the top include a letter-size file for keeping important correspondence and bills in order.

DANISH KNOCK-DOWN DESK.

Finished in white PVC for easy maintenance, and sporting bright red D handles for contrast, the Door Store's contemporary desk is just 47 inches wide, yet it includes three shallow drawers at one side, a bookcase at the other, and plenty of space for your knees in-between. Imported from Denmark, the desk can be ordered with a separate, matching four-shelf bookcase. Both pieces knock down easily for storage.

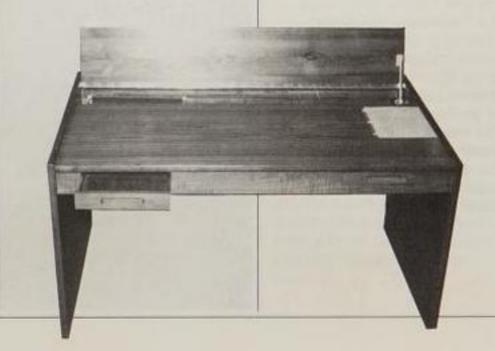

BON MARCHÉ

Bon Marché imports many of its contemporary home furnishings from Europe, where some of today's most innovative designs are being created. Whether you are able to visit one of its retail outlets in the New York or Washington, D.C., area, or do your shopping by mail, you'll find a selection of modern furniture and housewares broad enough to furnish an entire home or apartment. Bon Marché specializes in knock-down pieces that are easy to put together but that can be stored flat until you need them.

polyvinyl veneer finish makes Bon Marché's fold-down desk easy to clean and relatively impervious to wear. Its hinged flap, supported on sturdy folding legs, makes it a good choice for tight spaces. And the base is fitted with casters so that you can move the piece easily whenever you need to open it fully for letter writing or bill paying. Two roomy drawers are included.

HANGING FILE DESK. A hinged lid (shown open) built into the top of Bon Marché's teak veneer desk hides a deep hanging file drawer that runs the full width of the piece—a generous five feet. Since the drawer is secreted at the back of the desk, it won't cause you to bark your shins every time you sit down, and the hardware won't interfere with your writing space. When the drawer lid is closed, it provides an even bigger expanse of work area to spread out on.

VARIANTE DESK/DRESSING TABLE.

Part of an entire system of bedroom furniture and storage pieces
imported by Conran's from Portugal, the Variante desk/dressing
table is composed of white melamine and natural pine veneer and
fitted with simple white D handles.
Use it as a work space or as a
dressing table—or as both if
you're cramped for space. Conran's packs it flat for shipment, but
it can be assembled in minutes
and no tools are required. The
piece measures 47 inches in
width by 19 inches deep.

TECHLINE SYSTEM. The desk and typing return shown at right are just two possibilities you can select from a wide range of modular Techline components that Placewares has available. Finished in white, gray, or oakveneer melamine over a composite wood core, the components can be assembled easily: all you'll need is a screwdriver. The matching two-drawer file on casters would be an especially practical addition to the modular system, but would be equally useful on its own.

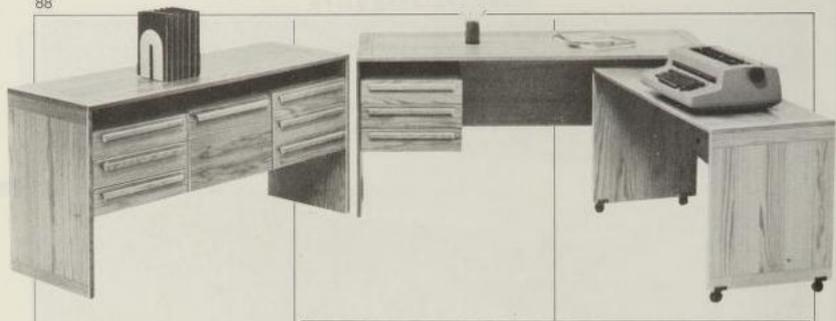

CHARRETTE

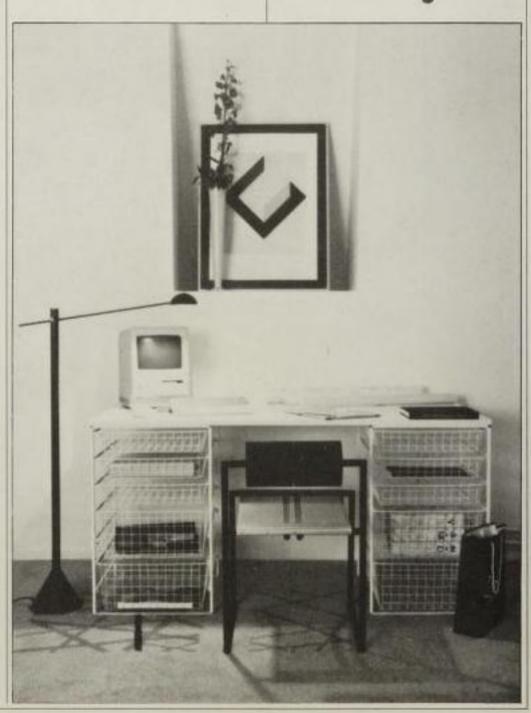

Founded as an architectural supply store in 1964. Charrette specializes in professional design materials and equipment. The furniture it offers is geared to use by draftsmen and other design professionals, and includes drafting tables, desks, chairs, lamps, and complete file systems. Yet many of the company's furnishings have great practical application for the home office, as they are modular units which can be adapted to serve a wide variety of functions.

REFERENCE TABLE. Part of Charrette's Modular Furniture System, this spacious table is made of ivory-colored melamine panels trimmed with natural oak. The two-drawer cabinet is optional and can be attached to either side of the table, a special boon if you are left-handed. The top drawer is a roomy 6½ inches deep; the bottom accommodates standard letter files. Matching drafting tables, computer tables, and free-standing shelves are also available. All are shipped knocked down and can be quickly assembled with ordinary household tools.

DESK/CREDENZA. Because of its modular construction, the credenza shown above at left can be transformed into the desk next to it simply by removing its center and one of its side drawer units. However, if you find that the more storage you have, the more clutter you collect, and therefore prefer a more Spartan way of working, you might opt to have the desk without any file modules added. The matching typing table can be rolled partly under the desk to conserve space. Workbench offers these knock-down modular units in either teak or oak veneer.

ELFA DESK. If you can't find a ready-made desk to suit your needs, why not build one that's exactly the right size and has just the right number of storage bins? The Elfa system offered by Lynk and Placewares is designed so that you can select as many pullout baskets as you require, pick an appropriate top (in birch veneer or Formica laminate), and put all of the components together using only a hammer. Casters can be fitted to the connector legs for greater mobility.

Work Units

A sturdy work or drafting table that provides ample room for drawing, writing, and other endeavors is a handy adjunct to most home furnishings. It may be a necessity, in fact, if you work out of your home. If you are blessed with a roomy garage, basement, or spare room, you can set up such a table with impunity and not worry about the floor space it usurps. If not, you might want to consider one that can be folded or knocked down to slip in a closet after you've finished the current project. Whether you choose a natural wood table or one with a maintenance-free polyvinyl finish, there are a number of utilitarian, attractive models available that will further your pursuit of either avocation or career.

COMPUTER TABLE. Although the Door Store designed its solid oak table especially to accommodate a personal computer, you might find it equally practical to use as a desk because of its generous work space (30 by 40 inches) and handy extra shelf. The height of the entire piece is 37 inches and the overall width 44 inches. Like most of the Door Store's home furnishings, it is shipped knocked down and assembles—or disassembles—easily, using only a wrench.

CAMBRIDGE. Steel struts lock into place to support the legs of the Cambridge drawing table, but collapse easily when you want to fold it up for storage. The white laminated top adjusts from 33 to 44 inches in height and can be set at any angle from 0 to 90 degrees. Charrette finishes the steel frame in black or white baked enamel and includes two self-leveling feet that will make short work of the most uneven floor surface.

LOFFE/BENKE. Ikea's Loffe trestles, made of solid pine, adjust to 11 different heights (from 25½ to 37 inches). They can be teamed, as shown, with the Benke pine top, which is available in two rectangular sizes or in a circular model roughly 36 inches in diameter. Or choose a different top or base from Ikea's wide selection and put together a sturdy work table that suits your individual needs.

BMC FOLD-AWAY TABLE. When set up, the BMC table features a sizable work space (42 by 30 inches) that can be adjusted from an angled to a flat position at your pleasure. Yet the heavy round tubing base folds compactly, so that you can store the unit easily when it is no longer required. Although this Placewares offering is certainly suitable for professional draftsmen, you might find other uses for it. Because of its portability, it could easily function as an extra desk or brunch table if the need anses.

DRAFTING TABLE AND ROLLING

FILE. Both the height and tilt of this solid-oak drawing table from Workbench can be adjusted to any number of positions. The top is surfaced with a white plastic laminate, as is the top of the matching oak file cabinet which can be rolled out when needed and tucked under the table when the work is done. The cabinet features three roomy drawers that provide ample storage for pens, pencils, and paper.

WORKBENCH

Workbench stores offer a wide range of contemporary home furnishings that are both well designed and well made. To that end, the company makes careful selections from the stock of a number of innovative European manufacturers. But not all of its furnishings are imported. Because the North American lifestyle sometimes has unique requirements. Workbench commissions exclusive designs from domestic manufacturers who will produce those designs to its specifications.

FOLDING DRAFTING TABLE. The Door Store's drafting table features an adjustable white Formica top and steel legs finished in black epoxy. The table folds flat for compact storage, as does the Door Store's equally useful metal chair.

BOBY UTILITY STAND. Designed by Joe Columbo for Charrette, this modular utility stand features deep storage wells that will easily accommodate mailing tubes, rolled posters, or rolls of gift wrap, and is fitted with open shelves and shallow pivoting drawers. Depending on the model you select, you can have as many as 2 tube wells, 3 storage shelves, and 9 drawers, yet the largest stand is only 29 inches high and roughly 16 inches square. Most models are available in a wide range of colors, including brown, yellow, and green; all come in white, black, or red.

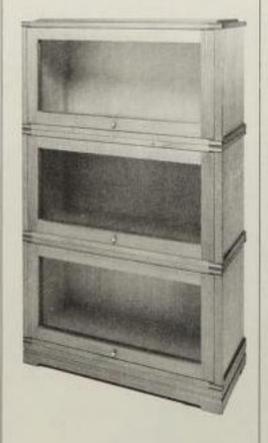

CHAPTER 6

Shelving and Cabinets

Freestanding Components

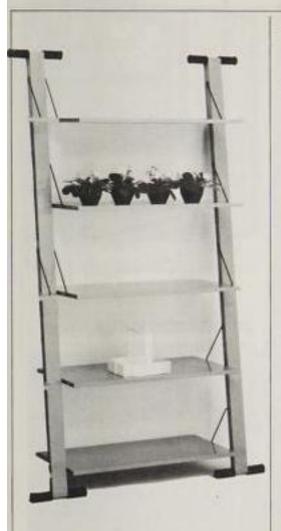

Hanging Components

Shelving and Cabinets

o you collect books? Records? Tapes for your new VCR? Porcelain figurines? Even if you aren't acquisitive by nature and are relatively scrupulous about shedding unwanted or outmoded items, you have probably found that the objects of daily life tend to accumulate at an alarming rate, increasing in inverse proportion to your available space and your wallet. Once-commodious shelves overflow and the resulting clutter spreads to areas that you had intended to maintain in Spartan order. Especially if you're an incorrigible pack rat, you may think that the situation is hopeless. But it needn't be. Nor do you have to spend a major part of your household budget on custom-made shelving and cabinets.

Contemporary furniture designers are creating imaginative and effective systems to display and store the objects we are passionate about, while remaining alert to budgetary considerations and aesthetics. One result of their efforts is a wide range of interchangeable cabinet and shelving components flexible enough to accommodate anything from a spare coat closet to a complete sound and video system. Another is the availability of portable open shelves that can be set up or knocked down according to need. Whether you prefer the con-

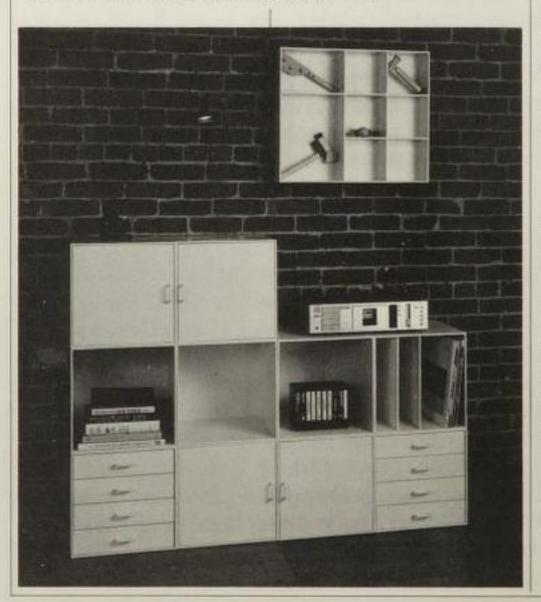

temporary look of white enamel or a more traditional oak or walnut veneer, you can select a complete wall system—or just one unit—that is right for any room.

Among the most versatile designs available are modular systems which can be stacked ad infinitum. Most begin with a basic cube, to which can be added shelves, drawers, and doors in endless combinations. One of the major benefits of such systems is that the individual components are generally quite compact, enabling you to arrange them in a configuration that is a perfect fit for the space you have available. Another is their flexibility: should you move, or should you want to rearrange your floor plan, the cubes can be shifted at will. A wall system could thus become a room divider, or could be split to fill two walls smaller than the one for which it was originally intended. And when you need still more storage room, you'll probably be able to add matching components inexpensively.

If the layout of your rooms makes a free-standing wall system an awkward choice (you might not have an unbroken expanse of wall available), or if you prefer a more permanent option, there are a number of wall-hung systems to choose from. Most widely available are open shelves that depend from vertical supports attached to the wall. A series of horizontal brackets is clipped to the supports at random intervals to accommodate the shelves. Such an option is extremely flexible: you could, for instance, install a single shelf over a doorway, run a group from floor to ceiling, or select any other combination that makes sense for the wall space you have to work with. The width, depth, and height of the shelves can be varied according to the size of the books and other items you plan to display. Some designs allow you to add closed cabinets and other modular units in an arrangement tailored to your personal needs.

Freestanding Components

One of the most attractive features of a well-designed house or apartment is a set of built-in bookcases or cabinets that will house the ever-increasing number of possessions most of us seem to collect. Unfortunately, such built-ins are not ubiquitous in modern life. And even if you are fortunate enough to live in a home which contains ample cabinets as part of its interior architectural detailing, there is one major drawback: you can't take them with you if you move. Luckily, there are a number of ingenious freestanding wall systems and shelves available that are both well designed and portable. Some models have the look of built-in units and thus can add immeasurably to your decor while augmenting your storage space. Others are modular pieces that will serve equally well along a wall or can be used as room dividers to give you a good deal of flexibility in furniture arrangement.

entertainment center. Handcrafted of kiln-dried Southern yellow pine, the Pine Factory's modular stackable units each measure 32 inches wide by 20 deep and 31 high, providing plenty of room for stereo components or a television. The basic unit features two adjustable shelves to which a pair of hinged doors can be added; instead of the shelves you might select three roomy drawers.

PALASET STORAGE. Placewares and Conran's both provide the versatile, inexpensive Palaset system. Its basic component is a black or white cube that measures 131/2 inches on all sides. By adding a door, four drawers, or extra shelves, you can create a virtually unlimited arrangement that can be adjusted to fit any wall. Once you have decided on the right configuration to suit your needs, attach the cubes using the connectors supplied. For greater stability, you might elect to screw the units to the wall.

HAGERWOOD MODULES. Each of the rounded open modules in the Hagerwood system is 16 inches deep; the length and width can vary from 8 by 16 inches to 24 by 32 inches. Because the modules are shipped knocked down, you can select exactly the right sizes for the items you want to display. Simply snap the pieces together (first applying a bit of household glue for extra stability), then glue each unit in place. Hagerwood provides its modular wall system in a natural wood finish so that you can apply any color or stain you like. One module alone could be used as a table; a group could become a room divider.

MAGIC. This teak veneer entertainment unit from Van Pelt is specifically designed to organize both audio equipment and a television/VCR combination, and to provide ample shelf space for records, video cassettes, and tapes. Duo-fold doors hide the TV; audio components fit in a sliding shelf which allows ready access when you want to put on a record; and the entire cabinet is shipped flat to be assembled easily at home.

VAN PELT

Van Pelt is a Beigian company that has specialized in the design and manufacture of solid-wood cabinets for more than 75 years. Its recently established Lifestyle Furnishings division brings those decades of experience to the production of high-quality ready-to-assemble furniture that has the look of its more expensive pieces, while offering greater mobility and a wide selection of options. Van Pelt's knock-down cabinets and wall systems are available in a range of finishes that will blend with almost any decor, from a formal living room to a sunny country kitchen.

WHITE RIVIERA. Van Pelt's white laminated Riviera cabinets (above. left) might be a better choice for an informal lifestyle than its woodveneer models. Varied cabinet widths are available, and components can be chosen from a wide range of options, including a drop-lid library, adjustable open shelves, cabinets, and glassfronted doors. Grooved moldings add a distinctive touch to the clean, contemporary lines. As is the case with all Van Pelt Lifestyle models, the units are shipped knocked down for quick assembly without nails or glue.

star combi storage. Designed in Sweden and made in Germany for Workbench, the modular storage system shown below is finished in white lacquer. Among the components you may select are tall, narrow bookshelves, bedroom chests, desks, drop fronts, glass or solid doors, extra shelves, and sets of drawers. While the Star Combi system is not meant to house heavy audiovisual equipment, it will accept virtually anything else you have to store.

NACKA. Ikea's lacquered particleboard cubes can be stacked on the floor or hung from the wall. The basic cube is 31 inches wide, 13¾ inches deep, and 15¾ inches high. To it can be added four drawers with hardwood guide rails, a set of record dividers, or shelves. The result is an extremely flexible and inexpensive wall storage system that can fill a variety of requirements. The cubes are available in white or bright red.

AN OPEN AND SHUT CASE. This beechwood bookcase is an innovative one-piece design from the Door Store: it sets up in seconds and folds flat for easy storage. Perfect for small budgets, weekend homes, or for a college student to take along as a practical adjunct to a dormitory room, the Open and Shut bookcase has an extra advantage—you can stack several for added height without usurping too much valuable floor space.

IKEA

Ikea was founded in Sweden in 1943 and has since opened many stores throughout Europe and, more recently, North America. Everything the company sells from its home furnishings outlets in Pennsylvania, Virginia, and Canada is geared to the Swedish ideal of a home that is furnished with informal, comfortable pieces as attractive as they are practical. All of Ikea's designs originate within the company; they have in common the principle that the finished piece can be packed flat and shipped disassembled for the customer to put together at home. The result is furniture that is comparatively inexpensive, yet high in quality and durability.

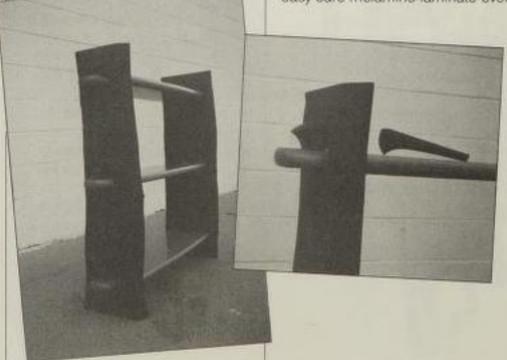

IVAR. A solid pine shelving system, Ivar comes in a choice of two depths and three heights, with lots of extra fittings to make its uses almost limitless. You can add drawers, two-door cabinets, clothes rails, record shelves, and desk or adjustable work tops as you see fit. The result is a warm, casual shelving system that will

accommodate just about anything you have to store in it. Depending on your needs, the Ivar system could be arrayed along a wall or used as a high or low room divider. Ikea leaves the pine unfinished for you to stain or paint as you like, but it would be equally attractive with just a clear varnish applied for protection.

TECHLINE. Select the components you require from Techline's wide array of doors, drawers, cabinets, shelves, and desk tops. All basic units are 18 or 36 inches wide and 18 inches deep; they come in six heights, ranging from 17 to 86 inches. The modules are made of easy-care melamine laminate over

a composite wood core (the laminate comes in white or gray; many pieces are also available in an oak laminate veneer). Once you've made your choice, Placewares will ship each unit flat for you to assemble at home or will assemble them for you at a slight additional charge.

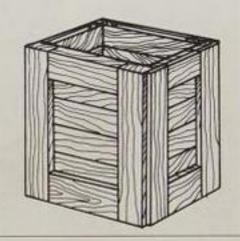

WESSELLS BOOKSHELF. Handcrafted from an unusual combination of fine woods, Tom Wessells' inventive bookshelf is as practical as it is handsome. The ends are of walnut; the shelves, of white oak (with a urethane finish); and the wedges which hold it together, of rosewood. The bookshelf, which measures 40 inches wide by 36 high and is 10 inches deep, can be easily disassembled for storage.

KARTEL STACKING DRAWERS. White modular plastic stacking drawers are joined by connector pins and can be positioned to open from any side. Each drawer unit is 161/6 inches square and 51/2 inches high. Placewares offers the drawers, lids, and optional casters separately for great versatility. You might pile a few next to a bed, or arrange several stacks along a wall as shown (above, right). Because you can select exactly the right number of drawers to suit your requirements, you might find them especially useful to fit a tall, narrow space. Conversely, a cramped, low area under a

dormer or in an attic that won't accommodate a more conventional bureau or cabinet would take a number of the Kartel drawers with ease.

PLACEWARES

Maynard Hale Lyndon and Lu Wendel Lyndon, who founded Placewares in 1978, are dedicated to providing help for people who need to make the most of their living and working spaces. In half a dozen stores spread throughout the Boston area and in their comprehensive catalogue, the Lyndons feature accessories, hardware, furnishings, and focures that offer practical solutions to space problems. If you need additional help, Placewares offers a planning service that puts special emphasis on the modular shelving and cabinet systems that are one of its specialties.

PLANTER BOX. This sturdy, solidpine box could certainly be used as a planter, or as a handsome receptacle for lots of other things. But a group turned on their sides can easily be arranged in vertical and horizontal configurations to suit your storage needs and your available space. Offered by the Pine Factory, the box measures 15 inches on a side and is 16 inches high.

LEANING BOOK SHELF. No avid reader ever has enough shelf space; books seem to multiply as rapidly as coat-hangers for those of us to whom they are an essential not far removed from breathing. Curtis Erpelding's solution to the space problem is this ingenious knockdown book shelf, shown both disassmbled (top right) and in its finished state. Erpelding crafts the piece in Douglas fir and makes it available in 4-fact or 6-fact lengths. Either size is easy to put together and takes minimum storage room when dismantled.

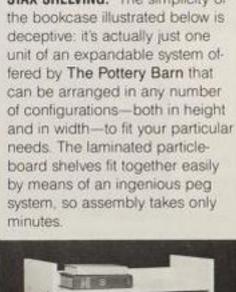

CURTIS ERPELDING.

The concept behind knockdown furniture is certainly a good one, but the execution can leave a lot to be desired. Furnishings designed to be shipped in pieces and assembled at home are often comparitively inexpensive because of the savings in labor and shipping costs, but they can be flimsy and unattractive, as well. Curtis Erpelding has been studying knockdown design with the help of a grant from the National Endowment from the Arts, and has crafted a number of pieces that are as handsome and beautifully made as they are practical. Just two of the innovative ideas to come from his Seattie studio are illustrated here; several others are featured elsewhere in this book.

STACKING BOOKCASE. Curtis Erpelding's furniture is intended, as he says, for "that individual who wants elegant yet practical solutions for modern living with its mobility and smaller spaces." That is certainly a description that fits most of us. His Douglas fir bookcases, shown both assembled and knocked down, can be stacked to whatever height is needed. The design, which Curtis admits was inspired by the oldfashioned barrister bookcases popular a century ago, is a classic that would look well with virtually any decorating scheme.

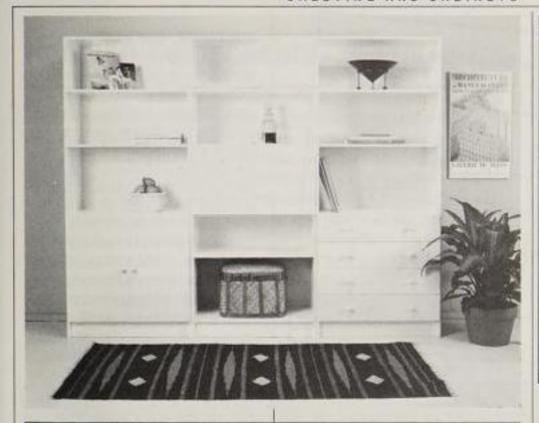

kubus storage. Available in pine veneer or dramatic black lacquer finish, the Kubus system from Conran's is imported from Sweden. The basic cube unit measures 27 inches in both height and width and 14½ inches deep. You can add shelves, wood (or glass) doors, or drawers to each module, then stack any number to create an appropriate wall unit to suit your space and storage requirements.

NADIA BOOKCASE. Made of unfinished beech that you can paint, stain, or leave natural, this useful open bookcase can be stacked for extra height, or you might want to use several side by side. A gently curved three-shelf corner unit is also offered by Conran's. Each model folds flat for storage when not required, an especially practical feature that makes the Nadia more portable than most comparable bookshelves.

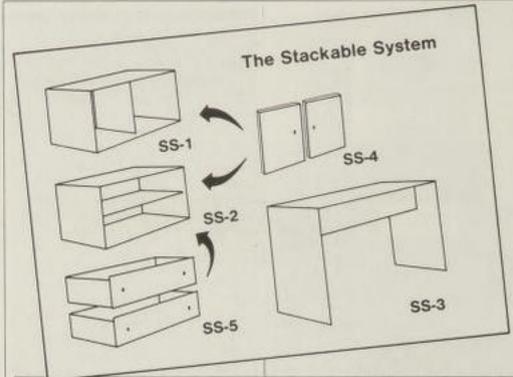

CONRAN'S

Twenty years ago, Terence Conran opened his first home furnishings store in Britain: now there are more than a dozen Conran's outlets in the northeastern United States alone, and the company runs a thriving mail order business to serve customers in other parts of North America. Its enormous success is due in large part to Terence Conran's emphasis on sophisticated contemporary furniture that is well designed, reasonably priced, and flexible. Among the company's major offerings are knock-down shelving and cabinet systems that can be set up in various configurations depending on available space and room arrange-

ARCTIC WALL UNIT. Finished in white lacquer or natural ash veneer, the Arctic wall unit from Conran's (above, left) is composed of three storage bays. Each 71-inch-tall bay features two fixed and two adjustable shelves, plus a special storage extra. The first has four spacious drawers; the second, a drop-leaf mid-section to use as a bar or small desk; and the third, a two-shelf enclosed cupboard. The three units may be clipped together as shown or used separately in different parts of a room or even in different rooms.

EUROFORM DIVISION BOOKCASES.

These metal-frame bookcases afford a great deal of flexibility
because of their light structure.
They feature rounded melamine
shelves and wicket-shaped
frames. The frames are available
in a choice of eight colors; the
shelves, in white or black. Origlia
offers four different models which
stand from 431/3 to 781/3 inches
tall, depending on the number of
shelves you select.

STACKABLES. Five basic components (left) comprise the Stackables system of furniture modules-two stacking units, a desk, drawers, and doors can be combined in various ways to create an arrangement such as the one shown below or can be configured to your taste and your available wall space. Since the units stack individually, they can be moved around whenever the mood strikes. StackAShelf offers the system in an oak or beige veneer or in a combination of the two. All modules are packed flat for quick assembly; the only tool you'll need will be a screwdriver.

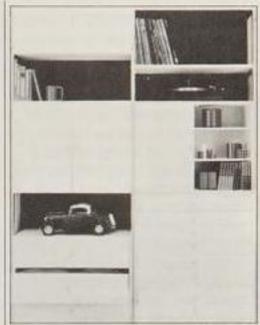

Hanging Components

While freestanding shelves may be the optimum choice if you aren't comfortable with hammer or screwdriver, wall-hung components offer a great deal of flexibility and can often save space in the bargain. (Even if your job makes it likely that you will move fairly often, you needn't be overly concerned with the screw or nail holes you've made—it's amazing what a little spackle can do.) Hanging systems come in a wide range of widths, depths, and heights so that they can be tailored to fit any available wall space, regardless of the radiators or window openings that must be skirted. Infrequently used items can be placed on shelves above head height, freeing more floor area for other furnishings.

RAKKS. Probably the simplest components of the ingenious Rakks wall system are the bookshelves shown above. Wallmounted standards with adjustable brackets permit you to support as many shelves as you need and to adjust them to a height that will accommodate the tallest or shortest objects in your collection. Rangine Corporation makes the supports available in either aluminum or black finish; the shelves, along with other Rakks modules, in black or white laminate or red oak veneer.

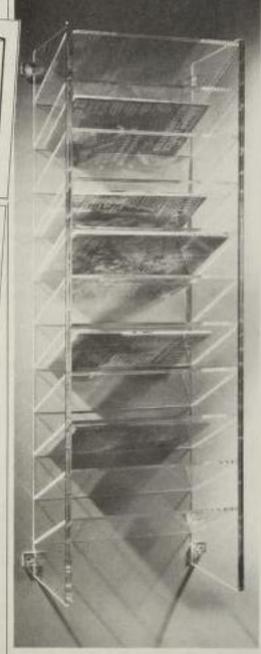

MORE RAKKS. The wall-mounted cabinets and open shelves shown above give some indication of the variety inherent in Rangine's Rakks Space Management System. The cabinets mount in 32-inch modules on wall standards and are available in a number of configurations; both 4-inch and 8-inch drawers may be combined in one module; 2-door cabinets in another; and open shelves in still another.

RANGINE CORPORATION

Rangine Corporation is a specialist in the engineering and production of inventive storage modules with innumerable applications for both office and home. No matter their intended purpose, all of the firm's components. offered under the name 'Rakks Space Management System," are designed to be attached to wall-mounted brackets or floor-to-ceiling poles that provide support for even the heaviest objects. You may choose a system of drawers or shelves, a drafting board (with a tamp to illuminate it), a specially designed computer work station, or any combination that is just right for your needs. Several possibilities are shown on this and the following page

AND STILL MORE RAKKS. Whether you need a solid wall of cabinets to store clothing and linens or a more open design that permits the display of your sculpture collection, Rangine's Rakks system can fill the bill. Narrow drawers will easily hold jewelry and other minutia; larger ones, bulkier items. A compact bar cabinet includes a drop-leaf door and a shelf for bottles; a dozen or so pieces of your finest stemware can be hung from a rack mounted on the inside top. If you're running an office at home, you can even have a special unit for your computer printer and a system of wallmounted files-just about anything, in short, except the kitchen sink.

MAGAZINE RACK. If you relegate your magazine to a pile on the bookshelf, chances are you will find it difficult to locate them when you want them. On the other hand, if you keep them on a wallmounted rack such as the one Plexi-Craft offers, not only will you rescue them from oblivion, but probably from dilapidation as well. The angled shelves keep the magazines neatly stacked and uncreased, the clear Plexiglas allows you to choose just the right one without undue neck-craning or rifling.

CHAPTER 7

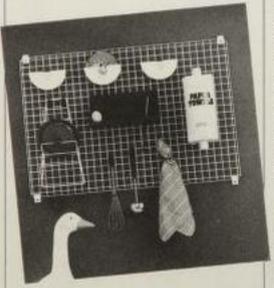

Storage

Closet Systems and Wardrobes

Freestanding Storage Units

Hanging Racks and Utility Shelving

Storage

hile a glass-front china closet, open wall system, or bookshelf makes an effective display of the treasures you want the world to see, there are many more practical, but perhaps less decorative, items you need from day to day that must be stored in some other fashion. Ideally, you'll already have found niches for all of them, including the kitchen utensils, household tools, garden supplies, current and off-season clothing, linens, and accessories. But since it isn't an ideal world, it's probable that there are storage areas in your home or apartment that could use some reorganization. And if you are among the majority, you don't have sufficient storage space to begin with.

The primary concern may be your clothes closets—or lack of them. If you have no budget limitations, you can hire one of the many excellent companies that specialize in custom systems tailored to fit your closets and all of the gear that must be stored in them. Or you can have a storage wall made especially for an appropriate room. While these options are good ones for homeowners, they generally result in permanent installations that have to be left behind if you move (they could add to the value of your home when you sell it, and most can't be adapted easily to fit in a new location). Luckily, there are many companies that offer both freestanding and easily installed closet systems flexible enough to move if you do

and to double your available closet space in the meantime.

Once you have fully utilized your clothes closets, you might want to cast a critical eye on other areas of your home. If you don't have sufficient cabinet space in your kitchen or bathroom (and who does?), you can augment it with some of the clever wall, door, or extra shelf components on the market. If extra shelving isn't the only answer to making your kitchen functional, you might want to consider one or more of the compact appliances specifically designed to save space (see Chapter 10).

If your gardening equipment, leisure gear, and household tools tend to wind up in a jumble on the floor of the garage, basement, or utility room, you can bring order to the chaos — and not by driving a bunch of nails into a convenient stud or two. There are flexible metal rack systems designed to hold all the gadgets you find essential to keeping your house or yard in order. Any one of them can be installed with only a few screws or masonry fasteners. Once you have the racks in place, you can rearrange the equipment as often as you like, using clip-on hooks specifically designed to hold the barbeque set, hedge clippers, lawn chairs, screwdrivers, and all the other paraphernalia vital to your do-it-yourself urges and/or to the enjoyment of your leisure time. Some of the rack systems even include wire shelves that can hold extra plant pots, fertilizer, peat moss, and bug spray.

There is a modular storage unit designed to accommodate everything from a bicycle to a case of soda, a soccer ball, or a box of laundry detergent. In short, no matter what oddly-shaped or awkward item you want to put neatly in its place, there is probably a ready-made storage component to do the job, since contemporary manufacturers seem able to anticipate our needs almost before we do.

Closet Systems and Wardrobes

The standard clothes closet, with its lone shelf above a single garment rod, is a poorly designed space that invites disorganization. All of the clothing, regardless of length, can be hung only from the one rod, leaving much of the space beneath to go to waste. Shoes wind up in a jumble on the floor with suitcases and carryalls that may not be needed for months. Hats, sweaters, spare blankets, and other paraphernalia are thrown on the shelf to be forgotten or misplaced. But there are possible solutions for the chaos. Any one of the systems featured on these pages can double the capacity of even the smallest closet. If you use one or more of them to reorganize each of your clothes closets but find that you need still more room, or you have no closets to work with, you might consider a freestanding wardrobe. There are a number of compact designs available, some of which include bureau storage in addition to space for hanging garments.

stackAShelf's freestanding closet shelf system. The horizontal two-shelf unit is 31 inches wide by 11½ high; the vertical, 30 inches high and a foot wide. Both are 11½ inches deep and can be stacked as high as you like to accommodate any items that need not be hung from a clothes bar. Finished in white vinyl for easy maintenance, both units are shipped flat; all hardware needed for quick assembly is included.

STORE MORE. Heavy particle board finished with a beige or simulated oak laminate composes the five basic units of the Alumax Store More system. Both horizontal and vertical shelves are offered, as are clothes poles (not shown—see page 141) which can be attached to the vertical unit on one side and to a wall or another vertical unit on the other. Both the vertical (30 or 36 inches high) and the horizontal (31 inches wide) units can be stacked for greater versatility.

VENTILATED SHELVING. The epoxycoated steel construction of Schulte's storage system permits air to circulate among the garments; open mesh baskets permit you to see what is stored within them. The basket drawers slide out on tracks for easy access; they are available in three widths and three depths to accommodate just about any article that needs to be put away. Once you've selected the baskets, choose one of Schulte's four frame sizes to support them; frames and baskets are freestanding, so you can change their location within the closet when you're in the mood to reorganize.

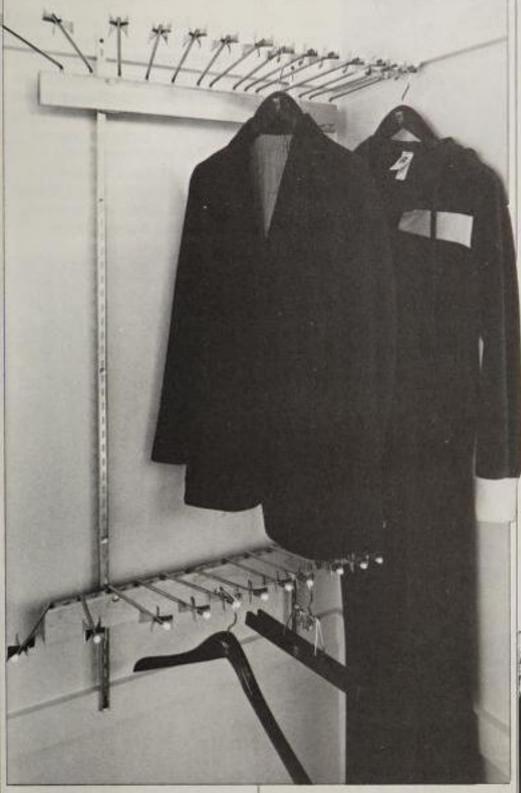

CLOSET MAXIMIZER. Part of Dorfile's Ventaire System, this vinylcoated steel shelving is available
in three sizes to fit closets up to
ten feet in width. The system is
designed to provide ample space
for shirts, jackets, and other short
articles at one end, dresses and
long coats at the other, and is
bisected by half a dozen shelves.
A slanted bottom rack keeps
shoes off the floor. All hardware is
included, as are the installation instructions (a drill and a screwdriver are the only tools required).

CLAIRSON INTERNATIONAL

Clairson International has manufactured Closet Maid storage systems for more than fifteen years, constantly adding to the available components and improving the system as a whole. In addition to various specialty shelving and wall, door, and cabinet racks. Clairson makes ventilated drawers that can be incorporated into any closet layout, eliminating the need for bureaus in a small bedroom or one-room apartment. Whether you need to organize a utility room, a pantry, or a walk-in closet. such as the one shown below. Clairson makes components that are specifically tailored for the purpose. Clear instructions accompany all hardware, making the systems easy to install.

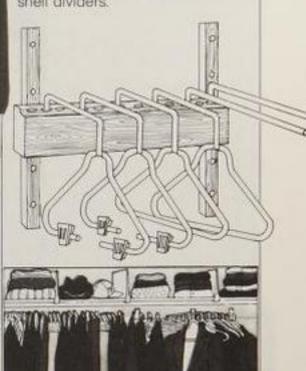

CLOSET MAID. Available in widths to fit any conventional closet. Closet Maid components include pre-cut shelving, pole supports, slanted shoe racks (right), and hardware. Clairson International includes complete instructions and a template that eliminates the need for time-consuming measuring and marking: just tack the template to the wall and drill the holes where indicated, then install the brackets and snap the shelves into place. All components are heavy-gauge steel with a smooth white epoxy coating.

THE SWINGER SYSTEM. Each of and blouses; for bulkier items, you might want to skip every other the swinging steel arms attached hole. The bars come in two-foot to Closet Systems' wood and lengths; each will hold a maxmetal framework (above) can acimum of twenty-four arms. You can commodate two standard hangmount one on top of the other for ers. The arms can be installed in shorter garments, or place several every hole in the wooden bar to hold thin garments such as shirts side by side for longer ones.

STAY-NEAT HANGER SYSTEM. The basic components of the Stay-Neat system (below) are solid-oak brackets attached to vertical oak standards, as many as fifteen rubber-coated steel hangers can be inserted in each bracket. Stay-Neat Closet Interiors offers a variety of special garment hangers, or will supply swinging arms from which to hang your own. The company also makes a number of different storage cabinets with clear plastic drawers to organize shoes, sweaters, and other items. Optional accessories include tie and belt racks and shelf dividers.

ATHENA. The Athena wardrobe from Conran's features a minimal contemporary design in white melamine veneer. Handles are available in white, or you might opt for aqua, yellow, or red for

contrast. The double wardrobe is shipped knocked down for easy assembly; it measures 70% inches high by 38% wide and is 23% inches deep when set up. Matching bedroom pieces in the

Athena group include a roomy 4or 6-drawer chest, a bedside cabinet on casters, a desk, a dressing table, and a low 2-door cupboard.

Freestanding Storage Units

Even if you have only a one-room apartment in which to arrange all of the items necessary to your daily life, chances are there are areas that are not being properly utilized. Cabinets and closets crammed to bursting with piles of clothing and accessories can be reorganized to give you more room than you thought possible, and you don't have to get out the tools to install a custom-fitted system—a blessing to those of us who don't know one end of a screwdriver from the other. Whether you would like to revamp a cupboard below the sink or a spacious walk-in closet, you can augment your available space by adding one or more of the freestanding units featured on these pages. There are models specifically designed to fit in those constricted spaces that are usually left to collect dust; all are constructed of practical materials that are easy to clean and relatively impervious to normal wear.

ADD-A-SHELF. Rugged, durable heavy-gauge steel finished in beige, white, or brown composes these versatile shelves from Quaker Industries. The horizontal unit measures 15 inches in height by 30 wide and is 12 inches deep; the vertical, 30 inches high by 18 wide and 12 deep. All

shelves can be inverted to provide a security lip that will prevent items from falling to the floor. Horizontal units can be stacked for greater flexibility; both models include vinyl feet to prevent scratching the floor, counter, or appliance top.

CLOSET MAID DRAWER SYSTEMS.

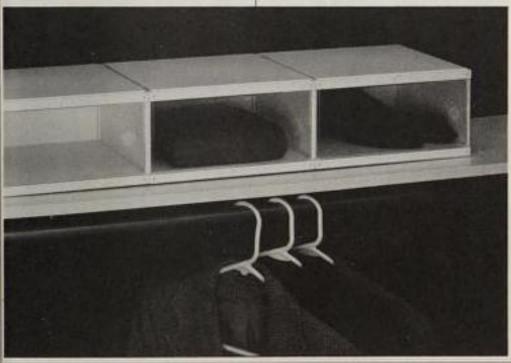

Clairson International's epoxycoated steel-wire drawers come in several sizes and an assortment of frames so that you can choose a selection to fit any available space, whether it's in a closet or out in plain view. The drawers glide easily on wide, flat rims; you might crown them with a special laminated top for extra counter space.

121

STOR-ALL. Unlike most cumbersome tall metal utility systems. Quaker Industries' Stor-All is scaled to fit easily in cramped spaces. Turn the unit one way for a width of only 12 inches, or change the position of the braces and you'll have a unit 18 inches wide. Composed of heavy-gauge steel with a laminated beige, white, or brown finish, the shelves would provide welcome extra storage in a tight spot in the laundry area, hallway, or garage, or could be slipped into a utility closet to organize cleaning materials and supplies.

R080L0. Available in white, red, or black, the Robolo modular plastic units from Placewares snap together easily to make open shelves that can be stacked ad infinitum. With optional clear plastic doors attached, they become dust-free storage bins for offseason items. Each unit measures 9 by 12% inches and is 6 inches high-a compact size that makes them ideal for augmenting storage in cramped spaces such as kitchen cabinets or narrow utility closets. (You can assemble them with either the wide or narrow expanse facing front, depending on where you plan to use them.)

ROVEL TROLLEYS. If you need extra room for cleaning supplies or toiletries, or could use additional space for other household equipment that should be kept in an accessible location, you might consider one of the sturdy trolleys from Better Houseware Corp. (above). Available with either three or four shelves, the trolley is made of steel wire with a wipe-clean vinyl coating that can be ordered in red, white, blue, yellow, or brown.

BASICS TROLLEY. Made in Italy for Conran's, the Basics Trolley is compact enough (251/2 inches high by 16 wide and 101/3 deep) to be tucked neatly out of the way until it's needed. Its three plasticcoated wire shelves will give you lots of room to organize pots and pans, garden or household tools. laundry supplies, or other items you'd rather not give valuable shelf space in the kitchen or pantry. Available in red or white, the trolley rolls easily on four metal casters, so even heavy equipment can be moved with minimum effort.

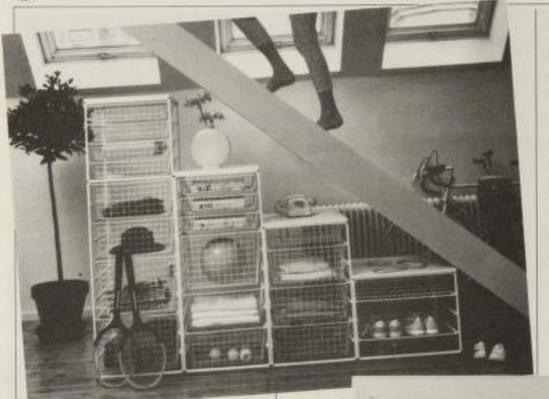

CONTAINERS. Among the practical accessories Placewares features in its catalogue and at its stores are many versatile stacking baskets and drawers (right) that can solve just about any storage problem. The plastic utility baskets shown at upper right are ingeniously designed to stack if turned in one direction; if you want to store a group of them, simply reverse them to form a compact nest that won't usurp much room in a closet. Stacking bins with ventilation holes can help preserve root vegetables such as onions and potatoes, or you might put some in a closet or along the walls of a child's room to hold clothes and toys.

MORE CONTAINERS. Whether you need to reorganize the cabinet under the kitchen sink or want to bring some order to the front hall closet, Placewares has a container system that will probably be just right. Many of its modular storage units are made of brightly colored plastic (red, yellow, and blue are often available in addition to white) that will add a cheerful note to a dark corner. Casters can be added to some of the components if you need extra mobility.

ELFA PANTRY. If your kitchen doesn't have a spacious pantry where you can store bulky canned goods, cereals, and the like, why not make one using Elfa components chosen from Placewares or Lynk to fit the space? Both shelves and drawers (below) slide out easily on wide tracks, and the open design lets you see where everything is located, saving valuable time when you're pulling together all the ingredients for a favorite recipe or four-course dinner.

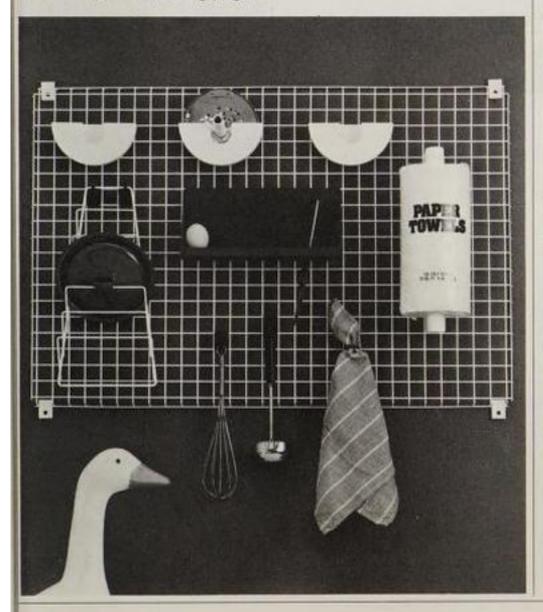

ELFA STORAGE SYSTEM. Because it consists of a number of modular components that can be fitted together in many different configurations, the Elfa system from Lynk and Placewares (above) can provide extra storage in any out-of-the-way area, no matter how confined or oddly shaped. Drawers range from 3% to 14½ inches high and from 9 to 20¾ inches wide (standard depth is 20¾ inches).

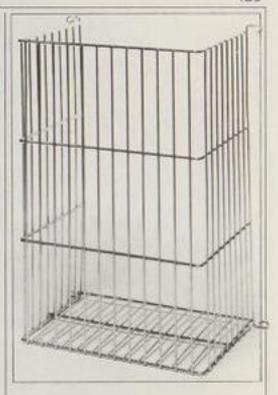

LYNK

Both a manufacturer and an importer of shelving systems, Lynk offers a wide range of models that can be tailored to fit almost any storage requirements. One of its imports from Scandinavia is the Elfa system featured here. Another (not shown), is Skanshelf modular wood shelving, whose more than 160 components can be set up in various configurations to form extra closets, cabinets, utility storage—and even beds and tables.

Hanging Racks and Utility Shelving

If you've reorganized all of your closets and cabinets, thrown away the items you never use, and installed some modular shelves to help contain the clutter, you may still find that you don't have enough storage room. If so, consider using a wall, the back of a closet door, or the underside of a kitchen cabinet to accommodate some of the items that won't fit anywhere else. There are innumerable wall racks and utility shelves available in sizes appropriate for just about any location you might have in mind. If you are faced with the problem of finding a place to store garden or household tools or outdoor games, there are wall racks designed for the purpose that will keep the portable grill, rake, shovel, badminton set, hose, saw, and stepladder neatly organized on a convenient wall. Just a few of the many options to be considered are featured on the following pages.

clothes hamper. If you have to deal with a tiny bathroom that has no space for a freestanding hamper, why not hang one on the back of the door? Thonet's chrome-plated steel basket is 18 inches high, 12" wide, and 8" deep. It is specially made to fit within a Thonet wardrobe (see page 118), but one like it could serve just as well in another location. You could even use it as a convenient hanging wastebasket by adding a paper or plastic liner.

wall grids are offered by Placewares in three sizes, ranging from 12 by 24½ inches to 25½ by 37½ inches. Once you've picked the right size and color (red, white, or black), clip on the special nylon hooks, which can hold matching wire baskets (also offered in three sizes), a paper towel holder, or your own kitchen utensils, oven mitts, and other household gadgets.

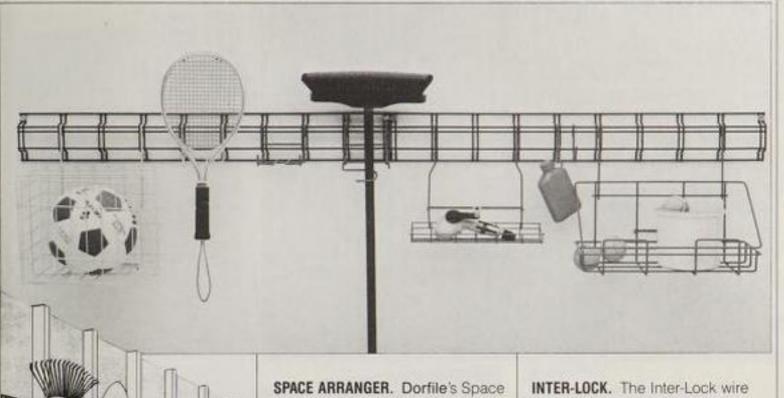

STOR-RACK. Because of its compact design (each unit is only 4% inches deep), you could attach one of these hanging racks (above) to the back of a kitchen cabinet or vanity door, or arrange several on the wall in a stairwell or narrow hallway. Schulte Corporation makes its Stor-rack available in two-, three- and four-shelf models, each of which comes in three widths, for a total of nine separate options. The Stor-rack is made of white epoxy-coated steel rod shelving strong enough to support heavy items with ease.

DOR-WALL RACK. Designed in a 77-inch length to fit any standard door. Schulte's Dor-wall rack is less than 5 inches deep-narrow enough so that it won't prevent the door from closing properly, but big enough to accommodate economy-size cans of juice, fruit, and vegetables. (It is shown here as an adjunct to one of Schulte's installed shelving systems.) You might want to order several extra racks to augment utility storage on a workshop or laundry-room wall. Available in three widths (12, 18, and 24 inches), the rack is made from a one-piece unit of welded steel with a bonded epoxy coating that eliminates sharp edges and is easy to clean.

SCHULTE CORPORATION

Schulte Corporation manufactures a complete line of epoxy-coated steel wire shelving which can be tailored to fit any available closet space. In addition, the company offers a number of wall and door racks that can be put up. with just a screwdriver, eliminating the more complicated measuring and drilling chores that some might find a daunting or time-consuming prospect. Common to all of Schulte's products is their apen-work steel construction. which not only provides ventilation to cut down on musty odors in enclosed spaces, but enables you to spot the object you're looking for at a glance.

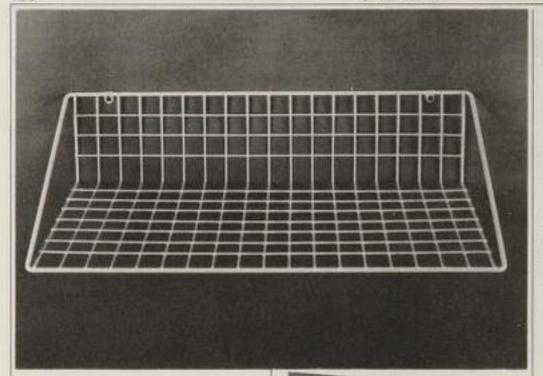

SPACE ARRANGER. Dorfile's Space Arranger system (left) consists of 32- or 48-inch steel bars that can be hung from any wall, using the screws provided (or masonry anchors if needed). Once you have positioned the bars in a configuration that suits the tools you want to store, select a hook appropriate for each tool (from a garden hose to a rake, shovel, or bicycle) and snap them in place. The hooks can be rearranged whenever necessary without rehanging the supporting bars.

store More. The Store More closet system (see page 114) is versatile enough to use in a laundry room or workshop that needs some organization. As shown at left, any of the modular pieces can be mounted high on a wall to provide additional storage space out of the line of traffic. All components slide together to create a solid cabinet; the quick-locking assembly patented by Alumax eliminates the need for separate hardware.

rail storage system (above) saves space by organizing and hanging things out of the way, yet keeping them visible for easy access. The mounting rails are available in 24-, 36-, and 48-inch lengths. Matching accessories offered by Placewares include six hook designs, a hose hanger, a special holder for footballs or basketballs. several baskets, and a utility shelf. An especially thoughtful feature is a storage cabinet that you can padlock to keep harmful sprays and detergents away from curious children. All components are made of heavy-gauge steel with an epoxy coating in white, red, or black.

ROVEL UTILITY SHELF. Rovel's compact utility shelf would be equally useful in the bathroom, kitchen, or workroom as an extra place to hold anything from towels and toys to small appliances. Constructed of vinyl-covered steel wire, the shelf is available in white, black, or red and is offered in two sizes (8½ by 15 inches and 11 by 24 inches). Better Houseware Corp. includes the screws and anchors necessary for easy installation.

BETTER HOUSEWARE CORP.

Whether you need a set of vinyl-coated wire shelves to augment your cupboard space, a bathroom shower rack to hold your shampoo and bubble bath, a cake rack, or a cookie cutter, chances are Better Houseware Corp. makes it. The New York City manufacturer, founded in 1939, specializes in all sorts of hardto-find kitchen utensils; under its subsidiary, Royel, it produces utility shelving, trolleys, and grid systems. While the company does not self direct to the consumer, its products are at Bon Marché and other stores throughout North America. (Should you have difficulty locating a particular item, Better Houseware will be happy to suggest an appropriate local dealer.)

ROVEL GRID SYSTEM. The difference between Rovel's grid system and others available is that Rovel's comes complete with three accessories: a basket and a shelf that hook onto the grid, and an oval basket that attaches by means of separate grid hooks. Better Houseware Corp. makes the vinyl-coated steel-wire grids

(not shown) in white, black, or red, and in three sizes: 12 by 18, 18 by 24, and 24 by 36 inches.

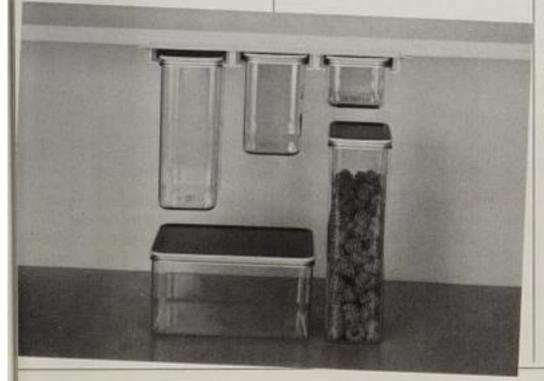

CLOSET MAID LINEN/PANTRY UNIT.

One of the newest designs offered by Clairson International, the Closet Maid linen or pantry storage unit requires less installation time than a fixed system, yet offers equal versatility. The shelves are held in place by rear poles that attach to the wall with sturdy endcaps and a center bracket. Once the back poles are attached, various widths of shelving and drawers quickly clip into the brackets on 84-inch tall rear and front poles. You can choose drawers for a pantry, flat shelves for a linen or clothes closet, or a combination of the two. All necessary hardware is included.

ROSTI UNDER-CABINET RACK. If you find that the clutter on your kitchen counter is usurping most of your work space, think about moving some of the staples up out of the way with a new set of containers and a clever under-

cabinet rack to hold them.

Placewares stocks both the Rosti
rack and the canisters that slip
into it. Airtight lids are available in
white, yellow, red, or blue; the
clear plastic canisters come in six
different sizes.

VENTAIRE DOOR/WALL BACK.

Ventaire door and wall racks are available in a wide range of sizes and models suitable for any number of uses. There are a fixed rack with two, three, four, or eight shelves, and an adjustable two-shelf rack that can easily handle the tallest cans and bottles you need to store. (Several adjustable racks can be positioned one above the other for extra shelf space.) Dorfile offers its Ventaire racks in either white or brown vinyl-coated steel; all necessary hardware is included.

stor-up shelving. There are a number of places in any home where this ingenious shelving design could be put to good use. You might put a unit in a closet, where it would be accessible when needed but unobtrusive when not. Or mount one on the wall of a cluttered garage to add

work space for special projects.

Or hang one next to the washer and dryer, where the shelves will be available to hold clean laundry as you fold it. Quaker Industries manufactures both the three- and four-tier models of heavy-gauge steel with a durable beige coating; all shelves measure a

generous 15 inches wide by 14 deep. The larger model can be ordered with twin clothes hangers and a detachable wire basket, each of which will remain in an upright position even when the unit is folded.

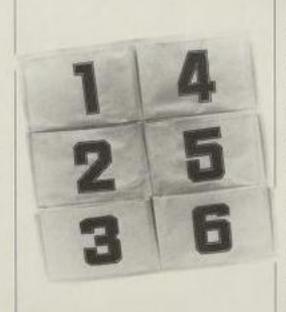

Children's Furnishings

Beds

Storage and Accessories

Children's Furnishings

newborn's needs are simple ones: nourishment, a few tiny layettes, a basinette, and a regular change of disposable diapers will serve very well for the first few months of life-along with lots of tender care, of course. Yet as a baby grows, so do the number of objects necessary to both its physical and emotional welfare. Everything from the bed to the storage pieces to the chairs will have to change as the child matures. If your budget won't be stretched to the breaking point by replacing most of the child's furniture several times during the stages of his life, you can start with a crib and a changing table, then trade them in for a toddler bed and a few drawers, and finally bring in an adult-size bed, bureaus, a desk, and bookshelves when homework becomes a nightly event. For those of us who don't have unlimited capital, however, there are alternativesfurniture selections flexible enough to grow with the child or children who will be using them.

Among the most ingenious designs offered by children's furniture manufacturers today are beds engineered to grow from toddler size to adult length simply by adding an extra section of mattress. More commonly available are sturdily made, well designed bunks that offer sleeping room for two children (or even three, with the addition of a trundle), and can be taken apart to use as twin beds when the kids are ready for a more sophisticated look. High trundle beds can be

even more flexible: some contain lots of storage beneath, including desks that can be pulled out when it's time to do the math assignment. Such pieces can be especially helpful when more than one child has to share a cramped room.

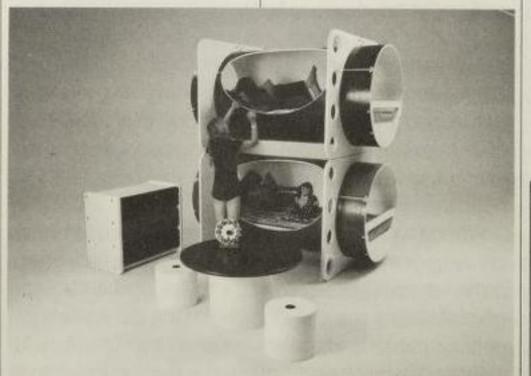

Children's needs for adequate storage space to hold treasures and clothes are no less important than those of adults. Surely one of the admonishments most often passed from parent to child is some variation on the theme, "clean up your room." While it is certainly a good idea for children to learn how to organize their belongings, this responsibility can be made more fun than work if the storage components are specifically designed with a child in mind. Brightly colored cubes can hold toys and books just as easily as standard shelves; canvas wall pockets can help to keep socks and underwear in good order. Both are not only practical, but provide imaginative decorations, as well. Modular storage systems can be augmented as required to hold both a toddler's games and an adolescent's record collection. There are even freestanding closet systems, made with children in mind, with clothes rods just the right height for tiny hands to reach.

When it comes to providing flexible children's furniture, contemporary designers have not neglected any basic items—even chairs are made to be useful through several stages of a child's growth. One particularly ingenious model is a toddler's armchair that can be used at three different heights merely by flipping it over to a different position. Another is a highchair that becomes a desk and chair just the right size for a kindergartner.

All of the children's furnishings presented in this chapter, no matter their style, materials, or function, share one common feature: they are designed to withstand years of the kind of abuse only children can dish out.

Beds

When it comes to choosing a bed for a child, you will probably be looking for a piece of furniture that is as rugged as it is comfortable. And unless money is no option, you'll want to select a style that will still be appropriate when your toddler becomes an adolescent. Another consideration, whether or not you plan to enlarge your family, might be to provide room for the small guest who is sure to be invited to stay occasionally. Yet since your child's room is probably the smallest bedroom in your home, you may have to choose a bed or set of beds that won't usurp too much space. Bunks are one option, of course, and there are many models to choose from, just a few of which are featured on these pages. But there are other possibilities, including trundles and loft beds ingeniously designed to take up a minimum amount of the floor area that should be left free for other activities.

BIG TOOBS. Designed to encourage a child's imagination as well as to provide a secure place to sleep, Big Toobs are cylinders of molded plywood brightly laminated in a tough vinyl coating that can take lots of abuse.

H.U.D.D.L.E. offers the Toobs in a

rainbow of cheerful colors, including red, blue, yellow, green, orange, and white. The beds can be stacked or used singly; match or contrast them with tubular bookcases, tables, and stools to create an environment that is as charming as it is practical.

CHILDSPACE. All of the modular components of H.U.D.D.L.E.'s Childspace series can be assembled using only a screwdriver, an Allen wrench, and instructions supplied by the company. Pieces are finished in white or blue lacquer (bed rails and drawer fronts are offered in solid pine); all are coated with durable. scratch-resistant polyurethane. Choose a corner bunk arrangement (as shown), twin beds, or separate bunks, and then add matching storage piecesshelves, desks, bureaus, and wardrobes among them.

H.U.D.O.L.E.

H.U.D.D.L.E. is the acronym for "Huil Urban Design Development Laboratory, Etcetera", founded in 1970 by a team of specialists with backgrounds in architecture, urban design, and elementary education. Their goal was to research, design, and manufacture. furnishings specifically geared for changing modern lifestyles. Many of the company's designs, therefore, are modular groupings or individual pieces that can be expanded as the familyor the child-grows. Colors and shapes are employed with great flair and originality, each item is carefully tested to make sure it can endure rough handling in even the most active household.

QUATRAIN HIGH SLEEPER. An excellent choice for a tiny cubicle, the Quatrain High Sleeper measures only 43 inches high by 39 wide and is 76% inches long. Within those compact dimensions, however, are a twin bed, a pull-out desk, two bookcases, and a set of drawers. (You might put a pair of the sleepers in a cramped room that has to be shared by two growing children.) Made in Denmark of solid pine and pine veneer, the Quatrain is shipped knocked down by Conran's, which provides comprehensive instructions for quick assembly.

TRUNDLE/BED. Made of solid pine, and constructed to withstand the bombardment of children, pets, and slumber parties, this durable bed from the Pine Factory is designed to be used singly, or to be stacked one on top of another to form space saving bunks. Either a matching trundle or a pair of storage drawers can be placed beneath the bed.

PINE BUNKS. One of the problems inherent in some bunk beds is their length, which may be generous enough for a pre-teen, but not for a six-foot adolescent who is trying out for the basketball team. Conran's offers solid pine beds that are each a full 80 inches long, offering ample head and foot room for most growing children. The beds can be ordered separately, or you might opt for a pair that can be used as bunks with the addition of connectors, a security bar, and a ladder-all available in an optional package.

TEEN BED. Storage drawers beneath and an attached bookcase/headboard at one end make the Door Store's single bed an especially practical idea for an adolescent's room. Available in bright white with contrasting red drawer pulls, or in teak veneer, the bed can be ordered with matching four- and six-drawer chests, as shown; you might add the Door Store's well-designed student desk to provide work space, extra drawers, and a three-tier bookshelf.

JGM LOFT HOUSE. One of many styles available in the JGM line from The Children's Room, the loft bed (below) is 45 inches tall, providing ample space for toddlers to play beneath. (There would also be room for an extra bed to be moved part of the way under it in an "L" shape, if you

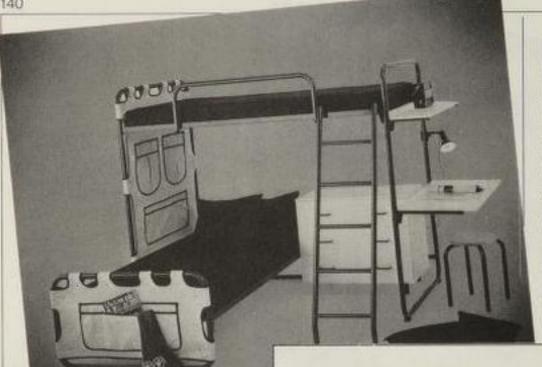

prefer.) Finished in white with birch edges, the JGM loft sports rungs and supports in bright red or white. Matching bookcases, chests, or a wardrobe (as shown) can square off the end of the loft. If you need to fit two beds in a confined space, you can choose the same style as a set of bunks. JOLLA. Once the baby is old enough to have a real bed, you might want to select one that will grow as he or she does. The ingenious Jolia expands from slightly over crib size to adult length simply by pulling the ends apart and adding the extra mattress section included. The Children's Room offers the Jolia in white with birch edges; it expands from 33 by 53 inches to 33 by 77 inches, and has a convenient storage drawer beneath.

REKO BUNKS. Two ample storage boxes on casters (left) are designed to fit beneath the bottom Reko bunk to provide a place for toys, games, and clothing. Made of clear lacquered pine, the bunks measure 341/4 inches wide by 791/2 inches in length. They can be stacked, as shown, or used separately (the ladder is optional). Ikea supplies the Reko bunks and several other styles knocked down; complete instructions are included, and assembly takes only minutes.

WITT BED. Designed by Knut Hagberg and Marianne Hagberg, the Witt (right) is a minimally styled single bed finished in white lacquer. The optional trundle is fitted with casters, so it will roll out easily whenever needed. Ikea supplies both bed and trundle knocked down for quick assembly at home; mattresses are offered separately.

BUNK BEDS. Shown at left in an L-shaped configuration, Amisco's bunk beds can also be stacked atop each other if space is at a premium. (If you need additional sleeping area, you could fit a matching trundle under the bottom bunk). A handy work table can be attached to the side bars. as can a shelf to hold books or a reading light. The steel-tubing beds can be finished in your choice of bright epoxy colors and are shipped knocked down for assembly at home.

AMISCO

Amisco specializes in home furnishings constructed of steel tubing, a material which it forms in sinuous configurations and finishes in a variety of lively colors. Among the company's many offerings for children are cribs, full-size beds, and a group of accessones all characterized by their durability and practicality. Many of the pieces can be rearranged as a child grows - bunks can become twin beds, single beds can be turned into more sophisticated daybeds, and accessories can be added as necessary to provide places for homework as well as for play. The clever "dumping bags" supplied by Amisco (shown above) are made of cotton canvas with red, blue, or yellow piping. Snapped on to the bed rails, they would provide an incentive for even the most recalcitrant child to keep things tidy.

CONDO BEDS. The lower of Amisco's two Condo beds is fitted with casters which enable it to be pulled out effortlessly whenever needed (the upper can be supplied with them at your option). A three-drawer dresser (finished in beige, white, gray, or black) can be attached to the upper bed;

drawer pulls can be ordered in a matching or contrasting color. Amisco offers the steel-tubing beds in a rainbow of epoxy finishes: among the choices are red, peach, pink, yellow, navy blue, and brown. Mattresses are not included.

Storage and Accessories

As children mature, so do the number of possessions they accumulate and the number of activities they participate in. The baby's crib and a couple of drawers to hold the layettes give way to the preschooler's books and games and the ten-year-old's needs for a quiet place to do homework and a more capacious area to store the ever-burgeoning wardrobe. Thoughtfully designed storage pieces and accessories can be adapted as your child grows, and thus remain as suitable for the teenager's record and tape collection as they were for the toddler's dolls and train sets. Manufacturers who specialize in children's furnishings can even provide chairs whose seat heights can be adjusted to accommodate growing youngsters.

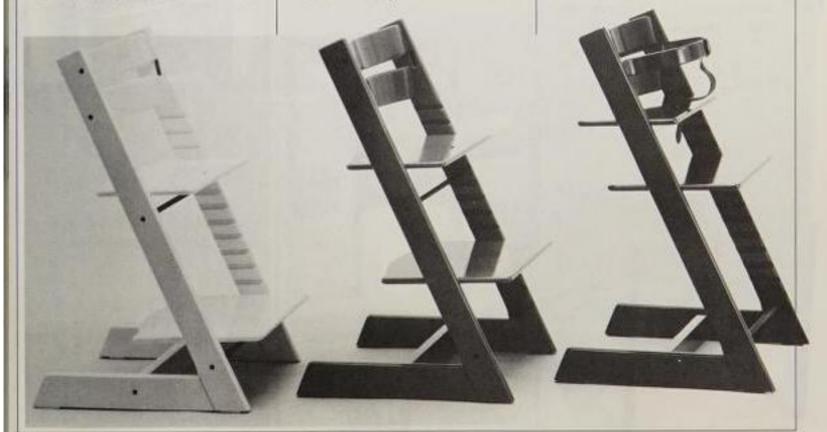

TRIPP TRAPP. The Scandinavians can usually be depended upon to create designs which are as clever as they are useful.

Westnofa's Tripp Trapp, designed by Peter Opsvik, can be used as a high chair (below, far right) or can be transformed at whim to a

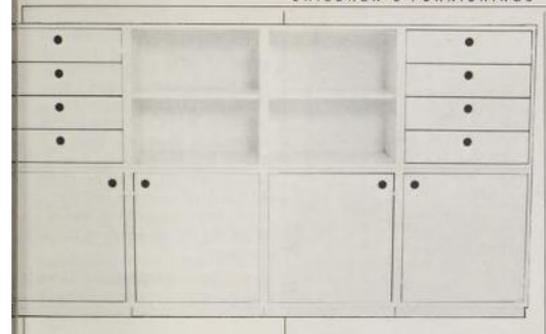

step stool or a chair for a toddler or an adult; all you have to do is to change the positions of the two horizontal wood pieces. Westnofa can finish the chair in your choice of colorful laminates or in a clear varnish that will bring out the natural wood grain.

single-roo Twin organizer. A pair of 36-inch stacking cabinets from the Alumax closet system can be fitted with an expandable clothes rod between them to create a storage area just the right size for a toddler to reach. The cabinets are finished in a beige or oak veneer; you might want to stain or paint them in a color that will complement the decor of your child's room.

kas cubes. Modular cube systems provide flexible storage for growing youngsters. It's not difficult or expensive to augment the number of cubes as a child's collection of belongings increases, and they can be placed in various arrangements depending on the space available. Each Kas cube

can be set on a 2"-base to raise it slightly off the floor. Both cabinet and bookshelf components feature single adjustable shelves; the bureau unit has four drawers. The Children's Room offers the cubes in all-white laminate or in white with birch doors and birch drawers. VI DESK. The top of the VI Desk is designed as a separate unit that can be placed with its vertical support either to the left or right of the four-drawer pedestal. And because it isn't permanently fixed. it can be moved out easily to create more work space and knee room, but slid back flush with the pedestal after the homework is finished. The Children's Room offers the desk in either teak or oak. Its oak swivel chair has a fully adjustable seat and back that can be raised as a child grows (the seat height ranges from 15 to 21 inches).

THE CHILDREN'S ROOM

The Children's Room was launched in 1970 with the intention of finding new sources of children's furniture and bringing to North America items that had not been available before. In its search for quality furnishings, the company avoids designs that are trendy and easily outmoded, concentrating instead on classic styles, good construction, and reasonable prices. Many of the pieces featured in its catalogue and retail store are imported from Scandinavia. Although The Children's Room is based in New York City, it maintains an efficient mail-order service to reach customers in all parts of North America.

FOLDING STOOL. Available in two sizes (with a seat height of 18 or 24 inches and an overall height of 26 or 33 inches), Amisco's folding stool is made of one-inch steel tubing with a hardwood seat. The frame can be epoxied in green. red, yellow, white, or black to match Amisco's bunks or condo beds (see page 140). The higher stool could be used by a toddler not quite tall enough to sit comfortably at the dining room table: either size folds compactly so that it can be stashed out of the way when not required.

BABUIN. At first glance, the Babuin might appear to be a standard high chair-certainly a useful item for a small child, but not an extraordinary one. Yet by taking the detachable seat out of the frame, laying the frame on its side, and placing the seat in a different location on the frame, the Babuin becomes a small table with a seat attached-perfect for a toddler who needs a place to use paper and crayons. In addition, the seat can be adapted for use as a baby swing by adding four optional ropes; a fitted cushion is available to support tiny tushies. Ikea makes the Babuin in bright yellow epoxy-lacquered steel tubing with a plastic seat and fiberboard table top.

student desk and chair. A folding writing desk made of ash wood is offered by Placewares with a white or black melamine top or in multicolored dyes of red, black, and yellow. The matching folding chair is available with a solid or lattice-work seat. The desk top is a spacious 38½ inches wide by 23% deep—enough to hold several textbooks and a notepad and still leave room for adolescent elbows.

STOR-DRAWER SYSTEM, Modular steel-mesh baskets coated with white or brown epoxy offer lots of storage options. The frames to hold the baskets are offered by Schulte in sizes ranging from 173/4 to 40% inches high and from 12% to 20% inches wide. Baskets come in depths from 31/4 to 113/4 inches. You can add flat shelves, solid tops, and shoe shelves. While the Stor-Drawer system would fit in a closet, it might also make sense kept out in the open as a reminder to a disorganized child that there can be, in fact, a place for everything.

CHAPTER 9

Outdoor Furniture

Chairs and Chaise Longues

Tables and Trolleys

Outdoor Furniture

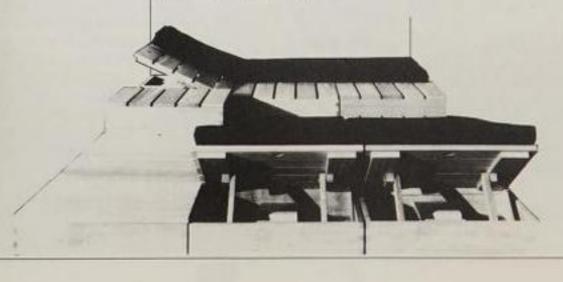

mong the most pleasant places to relax on a steamy August afternoon is the broad, sheltered veranda of an old-fashioned house. Such an idyllic location calls for the appropriate furnishings: wicker or wrought-iron tables to hold a pitcher of lemonade or iced tea, and well-cushioned chairs in which to laze while sipping a cool drink. Yet the generously proportioned furniture suitable for a wide Victorian porch would look totally out of place on the narrow balcony or pocket-handkerchief patio which is often the only outdoor living area appended to a contemporary home or apartment. If your outdoor space is limited, you'll want to choose furnishings that are in proper scale. Moreover, if you don't have a capacious lawn or patio, your corresponding storage room—in a garage, basement, or garden shed—may be equally limited, making it difficult to store summer furnishings at the end of the season. And if you haven't even a sliver of lawn or porch to call your own, you'll be looking for light, portable chairs that you can carry with you to the beach or the park and tuck away in a closet when you get home.

No matter your reasons for selecting portable summer furniture, you needn't settle for dime-a-dozen aluminum and webbing chairs and fake veneer folding tables that must be whisked under cover at the merest hint of rain. Contemporary manufacturers are employing space-age materials in the construction of stylish, comfortable furnishings that can be left out on the lawn or patio all summer long without detriment. Occasional grime or the residue from an errant flock of birds can be removed with a spray from the garden hose. Chairs and tables available today are durable enough to withstand the onslaught of legions of summer visitors, yet light enough to move around from one location to another whenever the mood strikes. Some of the pieces are even good-looking enough to use indoors—a special benefit if your budget is as tiny as your balcony.

What these furnishings all have in common is their portability: roomy armchairs are designed to stack or to fold so that a number can be stored in a very tight space. Practical serving trolleys feature removable shelves that double as serving trays. Spacious tables that fold compactly for storage include built-in handles to make them easy to tote around; smaller occasional tables, when folded, can be hung from a convenient wall.

Any of the pieces featured on the following pages will serve admirably, so once you've made a selection that suits your particular lifestyle, you'll have no excuse not to dust off the hibachi or grill and invite the hordes for an afternoon feast.

Chairs and Chaise Longues

The basic problem with a lot of so-called "outdoor furniture" is that it isn't really weatherproof. Aluminum chairs with webbed seats and backs tend to rust in spots; the webbing will rot after a few seasons of use. So although such chairs are portable from the standpoint of both their light weight and their capacity to fold, they aren't necessarily good choices for porch or patio. Contemporary manufacturers are providing other options which are as handsome as they are practical. Many of their chairs are finished in space-age materials that are just about impervious to Mother Nature's capriciousness, even if she is abetted by man's soot- and smog-filled city air. Most of the chairs featured here can be left out with impunity in all weather; you can clean them easily with a garden hose and a soapy sponge from time to time. When summer is over, they will fold, or stack in neat piles, to be put away without displacing too much precious storage space.

RIO. Strong but lightweight steel grids form the seat and back of the Door Store's Rio; steel tubing, the arms and legs. Completely coated with an easy-to-clean white polyvinyl, the chair stacks high for storage. Offered in either a high-or low-back style as you prefer, Rio can be fitted with optional cushions for extra comfort.

cotton sling. The brightly colored seaside motifs printed on the Door Store's cheerful beach chair might convince you you're at the shore even if you are only sunning yourself on a city rooftop. Four separate patterns are available, each printed on cotton canvas attached to a natural wood frame. The back of the chair can be adjusted to any one of four positions. When you have had enough sun, the chair folds to a sliver for storage.

FIESTA. Whether you're off for a day at the beach, a weekend in the country, or an al fresco lunch in the park, you might want to bring a couple of the Door Store's Fiesta chairs along. Made of candy-striped nylon canvas slung over a white-finished steel frame, they weigh almost nothing and fold compactly enough to be tossed in the trunk or tucked

under an arm. If the residue of too many picnics becomes evident, the sling can always be removed and tossed in the washing machine.

FLEXIBLE 3-D DECKING, While most decks certainly cannot be considered furniture, the ingenious, practical mahogany units available from C I Designs are just that, and more. They can be arranged in any number of configurations for seating, storage. and decking. Among the most versatile modules available is a 241/2"-square, 51/2"-high box seat with a hinged top. As illustrated,

several of these placed together not only provide a comfortable lounging area with a back that can be raised and lowered, but offer extra room for storing garden tools and other outdoor necessities. C I has foam cushions to fit, and will cover them in a fabric you specify or supply them with natural canvas zippered covers.

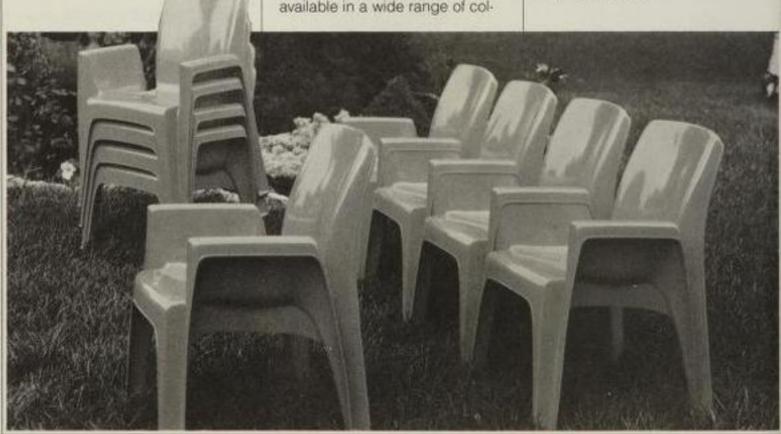

DANISH DIRECTOR'S CHAIRS. The ubiquitous director's chair has come a long way from the movie set. You can now find some version of the classic folding chair in virtually any home furnishings store; even discount outlets often carry a selection, however shoddily made. Conran's offers an especially handsome interpretation in natural wood with a wide range of colorful canvas seats and backs. While a group of the chairs would look wonderful arranged on a patio or under a favorite shade tree, they are good-looking enough to function equally well indoors.

PASTOE. Made of high-impact polypropylene that is totally resistant to wear, the Pastoe chair (right) is available with or without arms and in various color combinations of seat/back and frame that won't fade when exposed to the sun. Designed by Sebel for the Norix Group, the Pastoe is designed to knock down for storage in a minimum area. The matching drum table (48 inches in diameter) is available with or without an umbrella.

INTEGRA. Molded polypropylene is formed into the sleek lines of Sebel's Integra stacking chair. A material impervious to corrosive salt, chlorine, sun, and normal temperature extremes, it is available in a wide range of col-

ors. The Integra is offered by the Norix Group either with or without arms. Both versions can be stacked fifteen high without wobbling, and the resulting pile will be only 78 inches tall.

VICARIO. Designed by Vico
Magistretti for Artemide, the
Vicario stacking armchair is
molded of the company's patented Reglar material, a reinforced
polyester impervious to wear and
weather. Vicario's colors—white,
green, dark brown, Chinese red,
and light gray—are integrated in
the polyester rather than applied
to it for great resistance to
scratching. Each armchair
measures 18½ inches wide by
19¾ inches deep and is 29½
inches high.

SELENE. Vico Magistretti's side chair is made of the same practical reinforced polyester as is his Vicario armchair. Artemide offers it in colors to match the armchair, or in yellow, blue, or magenta. Both models are sophisticated designs that would look equally well indoors or out. Light in weight yet strong enough to withstand lots of abuse, the Selene measures 18½ inches wide by 19¾ deep and is 29½ inches tall. A number can be stacked compactly for storage.

planning to have a group of friends in for a barbeque and find that you don't have enough chairs to go around, why not consider adding a group of Allibert's stylish Dabaya chairs to your supply of outdoor furniture? Folded flat, they will take up very little space once the party is over, and they are totally weatherproof, so they won't be ruined if you forget to put them away. Seats are contoured for comfort, but Allibert can supply cushions, if you like.

TANGOR. The back of the Tangor armchair can be adjusted to any one of four positions for lounging; special fitted cushions add extra comfort. The chair comes in white; the cushions, in a choice of five different color combinations (Allibert can even supply a matching umbrella). While the Tangor is made of durable synthetic resins that are totally weatherproof, it does fold compactly when you want to put it away.

ALLIBERT

Allibert manufactures a comprehensive line of sophisticated outdoor furniture in its Grenoble factories. Common to all of the company's designs are their unmistakable Continental styling and their practicality: each piece is made of a durable synthetic resin compound that is impervious to the effects of sun, rain, and salt- or chlorine-laden air. The material is easy to maintain: just mild soap and water keeps chairs and tables looking fresh and white, even on a sooty urban terrace:

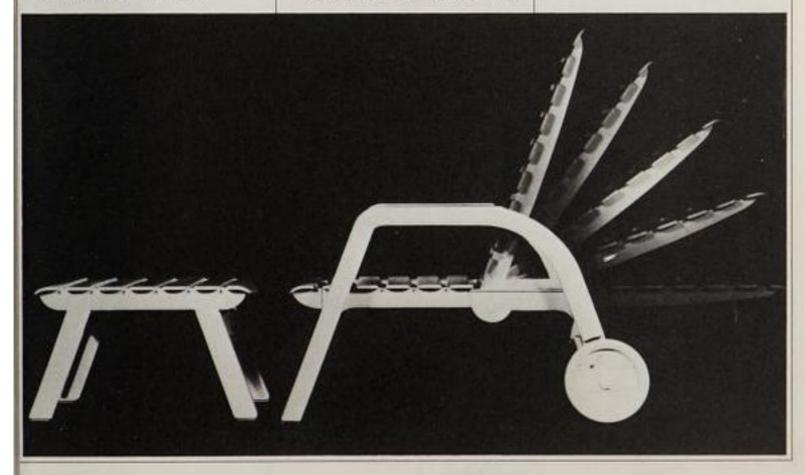

DALGORIA STACKING ARMCHAIR.

Made of the polypropylene resins that Allibert uses for all of its out-door furnishings, the Dalgoria armchair is molded to fit the body's natural contours. So even if you don't add the optional seat cushion, you'll have a chair that will support you in comfort for hours. Each chair measures a roomy 2 feet in width by 21 inches deep and is 32¾ inches high; a group will stack easily for storage.

DALGORIA ARMCHAIR/OTTOMAN.

Adjust the back of the Dalgoria armchair to its lowest position, add the ottoman, and you have a comfortable lounge perfect for whiling away a hot summer afternoon. Allibert can supply detachable cushions for even greater luxury. When company comes, the ottoman can easily double as a convenient side table to hold drinks and snacks. Rear wheels make the chair easy to move around; the spanking white resin compound used to make both chair and ottoman insures that they won't rust, stain, yellow, blister, or warp, even if left out all summer.

Tables and Trolleys

Even if your back yard is endowed with a handsome redwood picnic table, there will probably be occasions when you'll need some
additional tables to hold party snacks and drinks, or to stand next
to the grill to keep plates and condiments at hand while the hamburgers and hotdogs sizzle. If your space is limited, you will want
to choose occasional tables that can be folded and put away after
the guests go home. A number of suitable choices are featured on
the following pages. In addition, there are much larger tables that
can also be folded when they aren't needed, along with mobile
serving carts that can be wheeled effortlessly from one location to
another as the situation dictates. All have in common their portability and their imperviousness to weather conditions, so even a
passing shower needn't force you to put them away before you're
ready to do so.

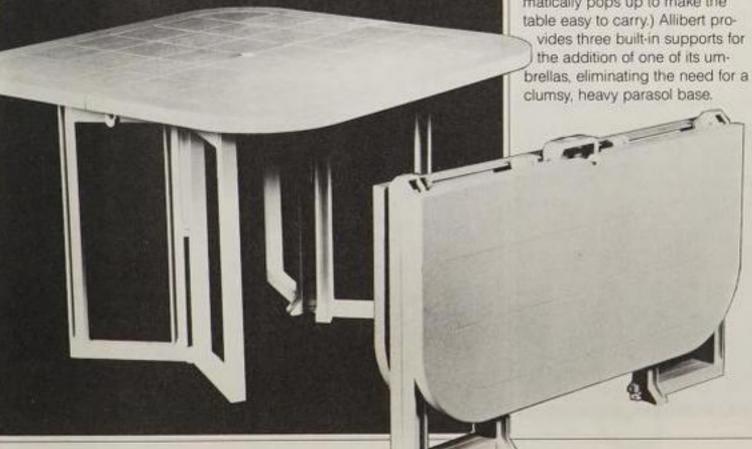

QUARTING SERVING CART. The generous size of its wheels and handles makes the Quartino serving cart easy to roll from one location to another; special racks on the bottom shelf will hold bottles securely while the cart is in motion. The trolley, shown with Allibert's Dalgoria stacking armchairs, features drop-leaf sides, so that it won't take up much space until needed for the next cookout or party. One shelf is detachable and becomes a handy extra tray. Allibert includes an umbrella hole as part of the trolley's design, and can supply the umbrella if you need it.

PUB TILT-TOP TABLE. The circular top of the Pub table locks into the vertical position shown for storage; the tripod base provides stability. Available in either a 23-or 32-inch diameter model, the table can be fitted with a patio umbrella. Because the Pub is made of the same durable synthetic resins as Allibert's other outdoor furnishings, it won't be affected by weather or heavy use, and even resists burns and scorching.

TERRACE TABLE. Whether you choose Allibert's Terrace Table in a 42-inch square model or in the rectangular version (42 by 26 inches), you will have an extremely practical outdoor table that can be brought out at a moment's notice to provide lots of room for an impromptu lunch or dinner. But when you don't need it, either size folds to a thickness of only 9 inches for storage. (As you drop the leaves, a hidden handle automatically pops up to make the table easy to carry.) Allibert provides three built-in supports for the addition of one of its um-

HANG-UP. You'll probably be able to think of lots of occasions when this simple circular table would be a handy adjunct to the other pieces on your porch or patio.

Quaker Industries makes the 16-inch-diameter table in metal with a baked-on enamel finish in white or beige. It folds easily, and a convenient hook is included, so you can hang it on a wall if you like

MODEL 13T101. Illustrated here is just one of several square metal folding tables offered by Quaker Industries. All are protected from the effects of the weather by a white baked-enamel finish. The model shown measures 17 inches square and the top is made of connecting metal grids. Model 12T100 differs only in size (16 inches square). If you prefer a mesh top, specify model 8T102 (also 16 inches square). If you prefer the look of wood. Quaker makes a redwood-topped folding table (model 20T106) which measures 16 inches square.

QUAKER INDUSTRIES

At its factories in Illinois and in Canada. Ouaker Industries manufactures many different types of tables, a number of which are suitable for use indoors or out. In addition to the metal tables and trolleys featured on these two pages, the company offers tray-table sets and other types of occasional pieces, with an emphasis on utility and portability. Most of its designs fold for storage, all of the outdoor furniture is finished in a tough baked enamel coating which is, easy to clean and will withstand occasional showers and extremes of temperature.

white Mesh serving cart. Constructed of %-inch tubular steel with a white enamel finish. Quaker Industries' handy trolley is designed with utility in mind. As shown at the far right (top), both of the 15 by 23-inch shelves are removable so that they can be used as extra trays. (Each is fitted with a security lip to prevent plates and silverware from sliding off.) The back wheels are fixed; the front wheels swivel to make the cart easy to steer. After the party is over, you can fold the trolley without removing the shelves, and it will easily slip into a cramped corner for storage. BELMAR HOSTESS CART. Each of the removable mesh shelves of Molla's Belmar trolley measures a roomy 18 by 26 inches. The aluminum cart can be finished in any one of thirteen colors to complement or match other pieces in the Belmar collection—nesting tables, stacking chairs, dining tables, and chaises are among the choices offered. All of the furniture is finished in a totally weatherproof acrylic that won't stain, rust, or peel but will clean up easily with soap and water.

castelli table. Injection-molded plastic forms both the top and legs of Kartell's streamlined. Castelli table. It can be knocked down for storage and assembles simply by snapping the legs into the top; there are no screws to tighten or metal parts to rust. The table measures 31½ inches square and is 28¼ inches high. Available in white only, it is shown with Kartell's Bartoli chair (in white or red). Both are offered by Placewares.

The Last Word

Appliances and Accessories

nce you have critically reviewed your living space and chosen furniture and storage pieces designed to make the most of it, you might find that you need still more room. But before you decide that the only option is to add on or move on, consider some less costly alternatives.

Just about every home and apartment, no matter how tiny, comes equipped with a stove and a refrigerator. These two appliances, along with the sink, often take up so much kitchen space that there's little or no room left for counters and cabinets. If your kitchen is a tiny one, you might want to think about replacing the old behemoths that are cramping your style with smallerscaled, yet equally servicable, appliances such as the ones featured on the next few pages. Should you be faced with creating separate living quarters in your home for another family member out of space that seems less than adequate, a compact, one-piece unit such as those offered by King Refrigerator might fill the bill. Major appliance manufacturers offer scaled-down dishwashers that can be fitted into much less space than their larger cousins, along with the more common portable units that can be rolled up to the sink after dinner, then placed in a corner when not needed. If you are heartily sick

of constant trips to the laundromat and frustrating searches for the right change once you get there, there are washer/dryer units available that can be fitted into a closet or an underutilized corner. (Ingenious designs permit many of the dryers to be installed on an interior wall, as they are self-venting and require no outside connection.)

If there are items you can't put in the dryer, or if you don't have a dryer, you might appreciate having a useful laundry rack that fits snugly over the bathtub and collapses neatly once the clothes are dry. An extra towel rack that folds against the wall when it's not in use might also be a handy appurtenance for bath or kitchen, especially when you're expecting overnight guests. And if there isn't sufficient closet space available for your guests' clothes, consider a knock-down valet or clothes tree that can be set up in minutes and stashed away compactly until the next visit.

There are many other accessories, ranging from tools to recreation equipment, that are designed with portability and utility in mind. Folding screens suitable for every decor from Victorian to postmodern can create an instant wall to improve an unwieldy floor plan, hide an unsightly mess, or provide extra privacy. A stepladder that telescopes to a sliver for storage; an ingenious little fan that screws into a common light-bulb socket; even a folding exercise bicycle—these are among the current offerings from manufacturers sensitive to the space crunch that is affecting so many of us.

Appliances

Economic considerations often dictate that we must live in smaller spaces than we would like. Modern kitchens in both houses and apartments tend to be cramped little nooks—afterthoughts in the design of the overall floor plan. It is encouraging to find that major appliance manufacturers are cognizant of the ever-diminishing sizes of the rooms we live in. They are offering compact, well-designed stoves, refrigerators, washing machines, and dryers that utilize a minimum amount of precious space but are nearly as capacious as the full-size models. Small appliances—microwave ovens, food processors, and can openers among them—are being constructed to slip into specially-made under-cabinet racks, freeing the counter space they once usurped for food preparation and other necessary kitchen tasks. Just a few of the ingenious, space-saving appliances now available are featured on these pages.

SUB-COMPACT MICROWAVE

OVEN. Only 9½ inches high by 18¾ wide and 13 inches deep. Whirlpool's small-scale microwave oven can be mounted under an overhead cabinet to save valuable counter space (specify the optional mounting kit, MK100). If you

want to bring it along on vacation or use it on the patio, the oven can be slipped out of the mounting brackets with little effort. Magic Chef offers a similar model, called the Tuckaway (not shown).

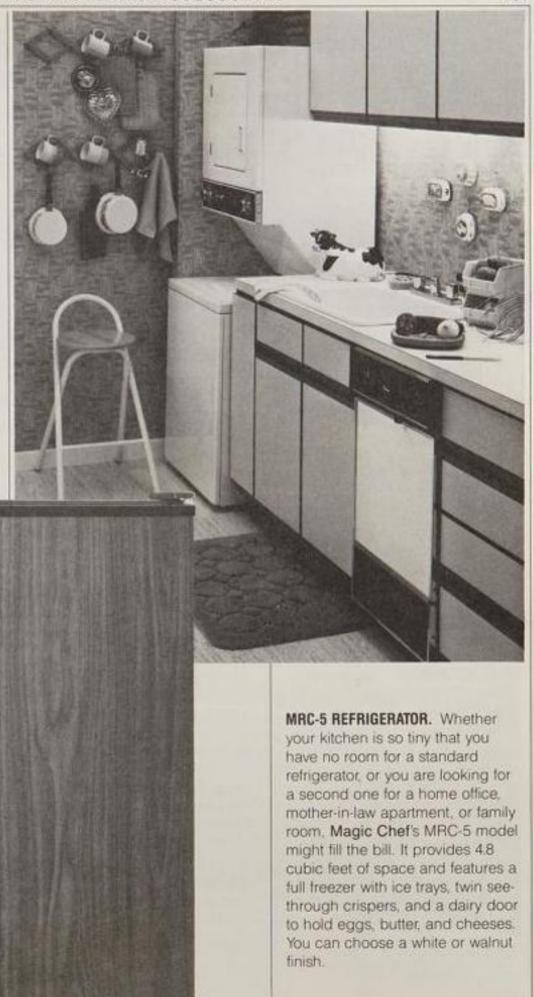

contempo mate. No expensive plumbing connections are required for Speed Queen's compact washer; it hooks up to a nearby sink. The dryer doesn't need outside venting—another saving, especially if you can only place it by an inside wall or if you rent, rather than own, your home or apartment. The laundry duo takes up just 41/3 square feet of floor space, yet can handle regular loads of wash with ease. Optional casters make the appliances easy to maneuver.

WHIRLPOOL COMPACT APPLIANCES.

An 18-inch-wide dishwasher might be the solution if your kitchen isn't as roomy as you'd like it to be. Whirlpool's model DU1800XP (shown to the right of the sink) will handle roughly two-thirds the load of a full-size dishwasher-up to eight place-settings of dishesbut takes much less space than its larger cousin. The Thin Twin washer/dryer is only 231/4 inches wide by 271/4 deep and stands roughly 6 feet high. Other models in the Whirlpool line of washers and dryers can be mounted on the wall or stacked using special kits the company makes available.

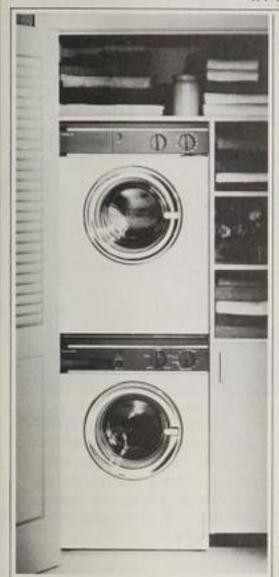

MINI-KITCHEN. In a space that measures only 30½ inches wide by 25½ deep and 67 inches high, King Refrigerator Corporation has managed to fit a two-burner stove, a refrigerator, a sink, and an overhead wall oven (either conventional or microwave). The refrigerator provides six cubic feet of space and features a push-button defrost. The Mini-Kitchen is available in either a gas or electric model and in a white, copper, green, beige, or gold finish.

ALL-IN-ONE KITCHEN CENTER. If you can find just 76 inches of wall space, you can install a complete kitchen, including a 4-burner range and oven (electric or gas), a stainless-steel sink with storage underneath, and a 9.2 cubic-foot refrigerator. King Refrigerator Corporation offers its All-in-One Kitchen Center in a choice of five colors and can provide optional wall cabinets and a microwave oven (as shown) to match;

KING REFRIGERATOR CORPORATION

King has been making refrigeration equipment for nearly lifty years and ofters a variety of compact appliance combinations measuring from 30 to 72 inches in width. One of its most ingenious offerings is Refresh-ade (not shown), a one-piece fixture only 4 feet wide and less than 3 feet tall, which includes a sink, a two-burner range, a re-Ingerator, storage space, and a wel bar. A hinged fid hides all appurtenances, and the unit is available in a walnut-grain. finish that would blend with the decorof the den or family room. (As a safety feature, the burners shut off automatically when the lid is closed.)

STACK LAUNDRY, Magic Chef's stack laundry is a full-size laundry system that takes half the normal space. The MDCP-1085 dryer stacks on top of the MWCP-1085 washer, making a perfect spacesaving combination for either home or apartment. The Stack Laundry could fit in a closet, as shown, or might slip into an available niche in kitchen or bathroom. In any location, it can handle heavy loads of wash effortlessly, making it a good choice if you must cope with all of the dirty clothes and linens a large family accumulates.

MYSON ELECTRIC TOWEL WARMERS.

Among the most sybaritic comforts on a cold winter morning is a
warm towel to envelop you when
you emerge from the shower. And
you needn't cope with expensive
installation to enjoy it. Myson electric warmers come in freestanding
or wall-mounted models. Both are
totally portable and use no more
energy than an ordinary light
bulb. Available in several sizes
from ARD Custom Kitchens, the
towel racks come in chrome, goldplated, or polished-brass finish.

HT COMFORT HEATER AND FAN.

When space is limited, it is a relief to find a combination space heater and fan that is not only compact but also stylish and exceptionally practical. The Krups HT model can be used on the floor, desk, or table top. Small yet versatile, it has a five-position control and an adjustable stand for directing air flow. In hot weather, the heater can be converted for use as a cooling fan.

Kitchen and Bath Accessories

Such accourtements as towel bars and dish drainers that litter the average kitchen and bathroom are generally useful and necessary items. Unfortunately, what they add in utility they generally lack in style. Once you have spent a good deal of effort decorating those two rooms, why spoil the overall effect with ill-designed, cheaply made accessories purchased from the nearest discount store? Especially when there are attractive alternatives available—alternatives which take into account both good looks and utility. Since bathrooms and kitchens are generally among the smallest areas in any home or apartment, space is an important consideration. A drainer that folds to provide additional counter space when the dishes are dry, a towel bar that stores flat against the wall; even a collapsible drying rack for hand washables—these and other accessories can help to make the most of the area you have available.

FOLDING DISH RACK. The standard dish drainer and ribbed rubber pad that sit beside most kitch en sinks may be useful, but they aren't terribly attractive and are difficult to store when the counter space is needed for other functions. Better Houseware Corp. makes a clever folding dish rack that collapses into its own com-

pact case. When open, the interior of the case becomes a drainboard for dripping dishes. The rack holds up to 13 plates, and includes a cutlery holder and grooves to secure cups or glasses. It is available in white, beige, or a combination of red and white.

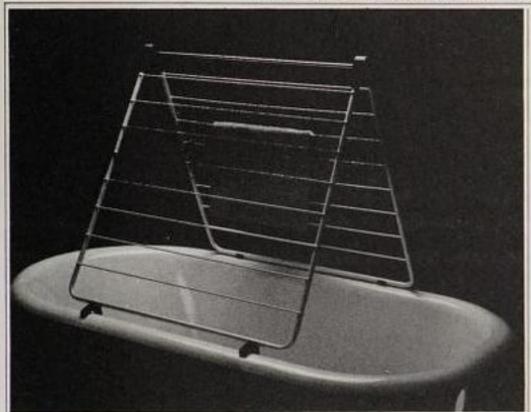

TOWEL-ON-A-ROPE. The rope and wood-dowel towel holder made by Better Houseware Corp. can be hung from any hook, doorknob, or nail, and will hold a roll of paper towels, a pair of hand towels, or two rolls of toilet paper. Perfect for the workshop, kitchen, or bathroom, it is easy to transport from one room to another as required.

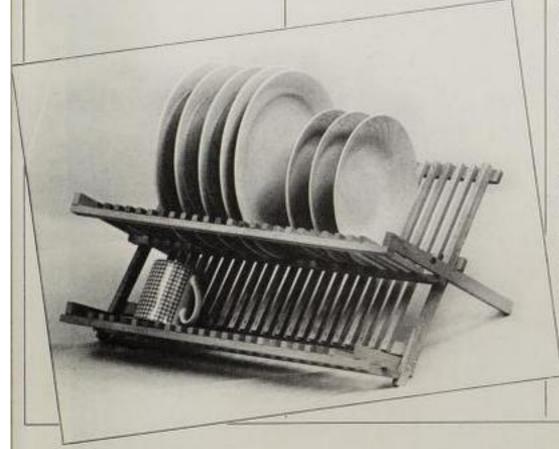

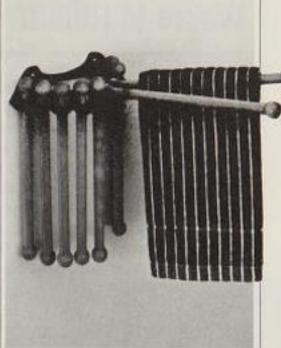

ADJUSTABLE TOWEL HOLDER. The adjustable stem of Better Houseware Corp.'s useful towel holder can be locked in various positions to fit several sizes of paper towels. The holder can be mounted vertically or horizontally on a wall or under a cabinet, or can stand upright on a counter top. It is packed with screws and mounting tape—and even a roll of paper towels.

OVER-TUB DRYING RACK. If you don't have room outdoors to hang a clothesline, or if inclement weather spoils your washday plans, you might appreciate Placewares' clever drying rack. It will fit any tub, no matter the

dimensions, and the mere push of a button will adjust it to one of ten possible flat or angled positions. The metal frame supports a generous 36 feet of plastic-coated line, and the unit folds flat for storage when the laundry is dry.

FOLDING WALL RACK. A reproduction of a design first patented in 1886, Placewares' handsome folding wall rack is no less useful today than it was a century ago. An enameled cast-metal holder supports nine fold-down wooden rods to hold utensils, towels, and anything else you want hung within easy reach. The rack is just 7½ inches wide and 11 inches high when folded; the rods extend 13 inches from the wall.

WOODEN DISH RACK. Imported from Sweden by the Door Store, this attractive wooden dish rack is stylish enough to leave out for company to admire, but can be folded compactly and stowed under the sink when you need the counter space. You might want to have several extras to keep the dishes inside your cabinets in good order.

Where to Hide It

If you want to partition a studio apartment for privacy, hide an ugly permanent fixture, or temporarily mask the debris in the kitchen from your dinner quests, you needn't resort to an expensive permanent solution such as a new wall or set of sliding doors that require installation. A folding screen can do the trick and add an effective decorative element to the room at the same time. No matter what style, material, or size you select, such a screen can be used in any number of ways. You might make one into an extra "wall" to rearrange an awkward floor plan. A screen made of a transluscent material will block an unattractive view, yet allow natural light to enter your only window. If you move to a new location, or want to make a change in the layout of a room, the screen can be moved to a new spot without effort or folded compactly for storage. Whether you prefer contemporary or period decorating styles, you'll be able to find just the right screen to complement the look you want to create.

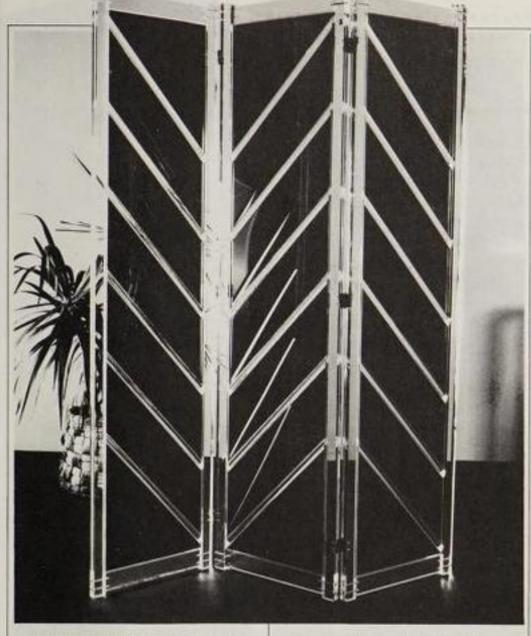

JAPANESE SILK SCREEN. The delicately painted silk fireplace screen illustrated below measures three feet in height and is six feet long when fully extended. It is just one of many contemporary Japa-

nese silk screens imported by The Fran Laufer Collection. Hand-painted with either floral or court scene motifs, the screens are available in a wide range of sizes and color combinations.

SHOJI SCREEN. The frames of the classic Japanese Shoii screen shown above are traditionally made of redwood, but you can have them made of cedar, pine, or basswood if you prefer. The Shoil Workshop makes the screens of white translucent fiberglass paper or laminated rice paper. Other fabrics-and glass-are available by special order. The company can supply the tracks and frames to your specifications and will manufacture screens to your precise measurements, whether you want to construct an entire wall or just hide the ugly view from a small window.

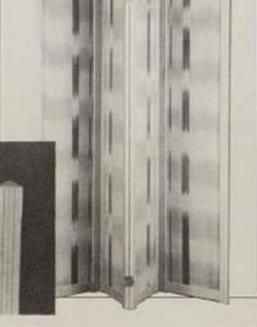

HERRINGBONE. Michael Zevy
Berkowicz designed the sleek
folding screen shown at left so
that its clear acrylic frame and
supports are part of the decorative motif. Each panel section is
set in separately, so you can
specify mirrored acrylic or
smoked gray acrylic inserts, or a
combination of the two. Plexability
offers the screen in custom sizes
and in other color combinations.

WRIGLEY SCREENS. Cabinetmaker Rick Wrigley has collaborated with artist Catherine Creamer on a series of folding screens of unusual quality and good looks. Wrigley is responsible for the fine wood frames; Creamer, for the hand-woven and dyed silk panels. The superb craftsmanship they employ is evident in the detail shown below. Bird's-eye maple

predominates in this example, which measures 72 inches high by 80 wide when fully open.

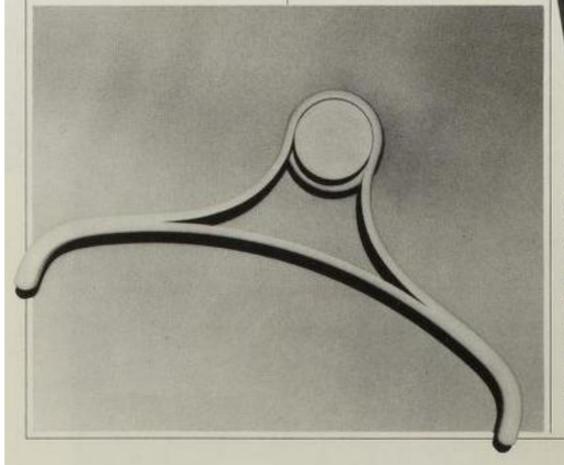

CHARLES EAMES SCREEN. The sinuous lines of this sleek wood screen are composed of laminated ash; canvas inserts between the panels give it flexibility. Created by Charles Eames in 1946, the classic design is available from Fifty/50, which specializes in mid-century furnishings and decorative arts.

Where to Hang It

When the closets are crammed to bursting even though you've organized them to a fare-thee-well, why not hang extra garments in plain view? If you choose one of the handsome valets or hangers illustrated on these two pages, the result can be a benefit rather than a liability. If you're having guests on a cold winter evening, you don't have to dump their coats on the bed in an unsightly pile. You might choose, instead, to bring a collapsible coat rack out of the closet and set it up in an alcove or corner. If you choose a design as handsome as the ones featured on these pages, the result will complement your decorating scheme and keep your company's wraps from being crushed.

COAT HANGER. Designed by Roald Steen Hansen and made in Denmark by World Pictures for The Museum of Modern Art, this minimally styled laminated beech coat hanger is attached to a wall button fitted with a concealed brass support that attaches easily and firmly to a wall or to the back of a door. Represented in the Museum's design collection, it is a modern classic that provides a convenient place to hang a coat or jacket, and a work of art when unadorned.

BENTWOOD COAT RACK. Made of either maple or oak, Curtis Erpelding's bentwood coat rack is composed of five sinuous "leaves" that attach to a central core. While the piece is good-looking enough to deserve pride of place in a front hall or entryway, Erpelding has designed it so that it can be knocked down for storage when not needed—after the company goes home, or during the warm summer months when no coats are required.

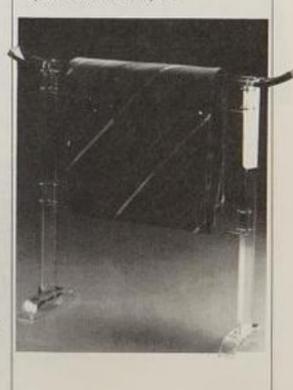

VALET WITH BENCH. Akko makes its useful valet/bench of half-inch-thick clear or black acrylic (specify model 6158). Extra skirt clips and scarf hooks can be added to your specifications. A convenient shoe bar is affixed to the

bottom of the bench; a key shelf and pants rod, to the back. Both the valet/bench and a valet without the bench (model 6150) measure 18 inches wide by 43 inches high. The cushion on the bench model is optional.

SERVETTO. Metal tubing is forced into the whimsical shape of a human figure to form Origlia's ultramodern valet. It can be finished in a choice of neon-bright colors—yellow, pink, blue, green, and red—or in more conservative black, white, or gray. The tubing components slip together easily, so that the valet can be disassembled for storage if you like. The "arm" of the figure swings out 90 degrees from its folded position, providing even more flexibility.

seems to be enough storage space to hold extra blankets and bedspreads. But if you have a treasured family quilt or fine wool blanket that you reserve for company use, why not keep it on permanent display on Akko's sleek holder? Made of half-inch-thick clear acrylic sturdy enough to support the heaviest spread, it measures 36 inches wide by 34 inches high; the colorless acrylic won't clash with even the brightest spread or Amish quilt.

The Last Word

After you have made careful selections of basic fixtures and furnishings to suit your living quarters, no matter how inadequately proportioned they may be, there are some unusual and imaginative accessories that you might want to consider. None of the items featured on these two pages are really essential, yet any of them could add an element of utility or pleasure to your surroundings—and either of those benefits might become an essential in itself. A portable fan, for instance, will stir the air on a hot summer afternoon, while a tromp l'oeil painting could give the impression of a tranquil country vista just outside your window, even if the only real view you have is of a neighboring apartment house wall.

HIDE-A-CYCLE. If you don't think you have sufficient floor space to keep an exercise bike handy, think again. The Hide-a-Cycle, designed by Vitamaster for Sears, is made of steel, yet it weighs less than 50 pounds. The seat and legs telescope and the handles fold down, so it can be tucked into a closet after your daily workout. The Hide-a-Cycle is fitted with an odometer so that you can keep track of how many miles you've pedaled.

STEPLADDER. Bon Marché's useful stepladder is standard height and width when open, but it folds to a compact 41/4 by 51/2 by 681/4 inches, so that it can be fitted into even the smallest apartment closet. Made of zinc-finished steel coated in red and black, the ladder also comes in a smaller, four-rung model that folds to the same width and depth and is less than five feet high.

NICECOOL FAN. This ingenious little fan (6½ inches long and 7 inches wide) screws into a standard light-bulb socket or can be used in place of track lighting or clip-on lights to provide a refreshing breeze on even the hottest summer days. Offered by Bon Marché, the fan is very quiet when operating and uses only 24 watts of power to run.

CHINESE DOWRY BASKET, In parts of China, woven reed baskets are given by the prospective groom to the bride's family as a sign of commitment. The baskets are filled with trays of "double happiness" pastries which are passed out to friends and family. The Fran Laufer Collection imports the baskets in assorted sizes, parterns, and colors. Each is trimmed with wood and brass and fitted with several deep, removable trays. Because of their flat tops. the baskets can serve as occasional tables and provide extra storage space.

CHICHIBIO. When you need an extra table, why not add your own top to a pair of Origlia's tripod legs? Available in eight lacquer colors or in white maple, they each measure 14% inches wide by 28 high when open, and fold flat for storage.

TROMPLOY. When you have tried every possible solution to enlarge your living space and are still feeling cramped, why not hang one of these clever canvas paintings on a wall or over a window that has no view? The artists at Tromploy are masters of illusion, and one of their cheerful scenes might just save you from total claustrophobia. Sally Friedman created this particular canvas.

which measures 4 by 7 feet; she or one of Tromploy's other artisans can transform a piece of canvas into a tranquil vista of your choosing, or can create visual foolery on a piece of furniture, a folding screen, or a floorcloth, if you prefer.

List of Suppliers

A

Akko Inc.

300 Canal St. Lawrence, MA 01840 (617) 685-3888

Catalogue available.

Designs and manufactures a wide range of acrylic furniture.

Allibert

119 W. 57th St. New York, NY 10019 (212) 247-7780
